1.1 Presentation

The ATW-KNX-01 gateway allows fully bidirectional monitoring and control of the Hitachi Air-to-Water systems from KNX installations.

The interface is intended to be used with Yutaki series. Check chapter 6 for models compatibility.

1.1.1 General features

- Reduced dimensions, easy and fast installation.
- Multiple control and status objects (bit, byte, characters...) with standard KNX datapoints.
- One status object available for each control object.
- Control on the Air to Water unit based on the ambient temperature read from the unit itself or from the temperature read by any KNX thermostat.
- The Hitachi Air to Water can be controlled simultaneously through the remote controller of the Air to Water system or through the KNX bus.
- Total supervision and control of the Hitachi Air to Water unit from KNX, including unit internal variables supervision, special modes control (such as Anti-legionella) and error alarm and codes too.

NOTE

This device is equivalent to HI-AW-KNX, therefore, some related information can be provided making reference to any of both devices (ATW-KNX-01 or HI-AW-KNX).

2. Connection

Index

2.1. Connection 4

2.1 Connection

Connection of the interface to the AW indoor unit is by means of the cable supplied with the indoor unit to connect the remote controller. It must be connected to the interface in one side (connector H-Link) and to the internal electronic board of the Air-to-Water indoor unit in the other side.

Connection of the interface to the KNX bus is by means of the standard KNX bus connector also supplied with the interface.

In order to plug the interface to the external power supply, two different methods are available. First one is using the external power supply provided with the interface using the DC JACK connector.

Connections diagram:

NOTE

- Connect only one external power supply. Use either the two-wire terminal connector (A) or the DC adaptor Jack connector (B).
- (*) Yutaki S example:

3. Installation and setup

Index

3.1. Installation and setup 6

3.1 Installation and setup

This is a fully compatible KNX device that must be configured using the ETS software.

The ETS database can be downloaded from:

http://www.hitachiaircon.es:8080/HapeWeb/ATW-KNX-01_v0.2.

Please, check the README.txt file located inside the zip file to find instructions for proper installation of the database.

NOTE

Do not forget to select the corresponding features of the Air-to-Water system connected to the ATW-KNX-01 interface. This should be selected in the "Parameters" section on the ETS software.

4.1 ETS parameters and communication objects

4.1.1 Default settings

When importing the ETS database for the first time, the following menu appears, with these parameter values selected as default:

With this configuration is possible to control the system (Control_ objects) and monitoring it (Status_ objects) through the following communication objects:

- Run or Stop the unit

■ ↕ 0: Control_ Unit Run/Stop [DPT_1.010] - 0-Stop;1-Run

This object allows to run or to stop the Hitachi unit features (C1,C2, DHW and/or SwimPool) at once. Sending a “0” value will turn them off, while sending a “1” value will turn them on.

- Change de Unit mode

■ ↕ 1: Control_ Unit Mode [DPT_1.100] - 0-Cool;1-Heat

■ ↕ 33: Status_ Unit Mode [DPT_1.100] - 0-Cool;1-Heat

This object allows changing the working mode of the Hitachi unit. Sending a “0” value the unit will turn into “Cool” mode, while sending a “1” value will make the unit turn into “Heat” mode.

- Run or Stop the C1 Circuit

■ ↕ 2: Control_ C1 Run/Stop [DPT_1.010] - 0-Stop;1-Run

■ ↕ 34: Status_ C1 Run/Stop [DPT_1.010] - 0-Stop;1-Run

This object allows to run or to stop the Hitachi C1 Circuit (or C1 climate zone). Sending a “0” value will close the C1 circuit, while sending a “1” value will open the C1 Circuit.

More functions related with the C1 circuit and their communication objects can be seen in section System working mode.

- Anti-legionella System

NOTE

The anti-legionella function is hidden to users by default. Installer can make it available if desired.

■ ↕ 30: Control_ AntiLeg Run/Stop [DPT_1.010] - 0-Stop;1-Run

■ ↕ 31: Control_ AntiLeg Setpoint [DPT_9.001] - °C

■ ↕ 64: Status_ AntiLeg Run/Stop [DPT_1.010] - 0-Stop;1-Run

■ ↕ 65: Status_ AntiLeg Setpoint [DPT_9.001] - °C

The Hitachi Yutaki units include an Anti-legionella system. From the gateway, this function can be activated by sending a “1” value to the Control_ AntiLeg Run/Stop object and can be stopped by sending a “0” value to the same object.

It is also possible to send a value to set the temperature of the Anti-legionella system to this value. To do it so you have to use the Control_ AntiLeg Setpoint object.

**CAUTION**

Anti-legionella will set the water temperature to the setting value during the specified time. This temperature will be dangerous to the user and could burn him or her. Installer is responsible for configuring it properly, advising the user, and enabling the function.

- KNX menu blocking

➡ 32: Control_ KNX Blocks/Enables Menu [DPT_1.003] - 0-Block;1-Enable

➡ 66: Status_ KNX Blocks/Enables Menu [DPT_1.003] - 0-Block;1-Enable

This object allows blocking or enabling the KNX menu from Hitachi's LCD panel. Sending a “0” value will block the Menu, while sending a “1” value will enable the Menu.

- Errors and Alarms

➡ 67: Status_ Error/Alarm [DPT_1.005] - 0-No alarm;1-Alarm

➡ 68: Status_ Error Code [2byte] - 0-No error/Any other see man.

These objects allows reading the system status indicating if any alarm or error is active (Status_ Error/Alarm) and, in case it exist, it indicates which error is (Status_ Error Code). See section 7 to get more information about the error codes.

4.2 General dialog

In the General Dialog (settings) tab, it is possible to enable, disable or modify the parameters shown in Figure 4.1. For instance, the first field is showing where you can download the database and the user manual from.

4.2.1 System working mode

This parameter enables or disables communication objects depending on the working mode selected: Water mode, Air, mode or Full (which includes both: Water and Air).

When selecting "Water" the interface will work for a water climate environment only. Water climate control and status objects will be available. Air climate control and status objects will be disabled.

- OTC Mode

The OTC mode (Output Temperature Compensation) allows keeping the desired indoor temperature despite external temperature variations.

From the gateway you can:

Turn this function off by sending a "1" value to the Control_ C1 OTC Mode Heat/Cool Off communication object.

- ➡ 3: Control_ C1 Heat OTC Mode Off [DPT_1.002] - 1-Set OTC Mode OFF
- ➡ 7: Control_ C1 Cool OTC Mode Off [DPT_1.002] - 1-Set OTC Mode OFF
- ➡ 35: Status_ C1 Heat OTC Mode Off [DPT_1.002] - 1-OTC Mode OFF is set
- ➡ 39: Status_ C1 Cool OTC Mode Off [DPT_1.002] - 1-OTC Mode OFF is set

Activate the different modes available for the calculus of the water temperature for the cooling or heating the facility where the unit is placed:

- Points: User fixes 4 points that will create a line function that will depend on the current ambient temperature.
- Gradients: In this case, the function used is not a line but a gradient. Only available for the Heat mode.
- Fix: The temperature adjustment is only performed by a fixed value. This makes the unit to keep this fixed value all the time

- ➡ 4: Control_ C1 Heat OTC Mode Points [DPT_1.002] - 1-Set OTC Mode POINTS
- ➡ 5: Control_ C1 Heat OTC Mode Grad [DPT_1.002] - 1-Set OTC Mode GRAD
- ➡ 6: Control_ C1 Heat OTC Mode Fix [DPT_1.002] - 1-Set OTC Mode FIX
- ➡ 8: Control_ C1 Cool OTC Mode Points [DPT_1.002] - 1-Set OTC Mode POINTS
- ➡ 9: Control_ C1 Cool OTC Mode Fix [DPT_1.002] - 1-Set OTC Mode FIX
- ➡ 10: Control_ C1 Thermo Setpoint [DPT_9.001] - °C
- ➡ 36: Status_ C1 Heat OTC Mode Points [DPT_1.002] - 1-OTC Mode POINTS is set
- ➡ 37: Status_ C1 Heat OTC Mode Grad [DPT_1.002] - 1-OTC Mode GRAD is set
- ➡ 38: Status_ C1 Heat OTC Mode Fix [DPT_1.002] - 1-OTC Mode FIX is set
- ➡ 40: Status_ C1 Cool OTC Mode Points [DPT_1.002] - 1-OTC Mode POINTS is set
- ➡ 41: Status_ C1 Cool OTC Mode Fix [DPT_1.002] - 1-OTC Mode FIX is set
- ➡ 42: Status_ C1 Thermo Setpoint [DPT_9.001] - °C

- Water mode temperatures

Using the following communication objects it is possible to control/monitorize water setpoint temperatures for the Heat and Cool modes (C1 Water Heat Setpoint and C1 Water Cool Setpoint)

- ↕ 12: Control_ C1 Water Heat Setpoint [DPT_9.001] - °C
- ↕ 13: Control_ C1 Water Cool Setpoint [DPT_9.001] - °C
- ↕ 44: Status_ C1 Water Heat Setpoint [DPT_9.001] - °C
- ↕ 45: Status_ C1 Water Cool Setpoint [DPT_9.001] - °C

When selecting “Air”, the interface will work for an air climate environment only. Air climate control and status objects will be available. Water climate control and status objects will be disabled.

- Air mode temperatures

With the communication objects corresponding to this mode enabled, control/monitoring of the setpoint temperature of the thermo (C1 Thermo Setpoint) and the ambient temperature provided by a thermostat not included in the Hitachi system (C1 Ambient Temp).

- ↕ 10: Control_ C1 Thermo Setpoint [DPT_9.001] - °C
- ↕ 11: Control_ C1 Ambient Temp [DPT_9.001] - °C
- ↕ 42: Status_ C1 Thermo Setpoint [DPT_9.001] - °C
- ↕ 43: Status_ C1 Ambient Temp [DPT_9.001] - °C

When selecting “Full”, the interface will work for an air and water climate environment. Air and Water climate control and status objects will be available

4.2.2 2nd circuit (C2) is available

This parameter enables or disables the Control_ and Status_ communication objects of a second circuit (or climate zone). In case the project is divided into 2 separated circuits this parameter needs to be selected to get control on each circuit independently.

When selecting “No”, the gateway will hide the 2nd circuit (C2) communication objects.

When selecting “Yes”, the gateway will show the the 2nd circuit (C2) communication objects. Depending on the other selected parameters, some objects will remain hidden and some others will be shown.

- Run and Stop status:

- ↕ 14: Control_ C2 Run/Stop [DPT_1.010] - 0-Stop;1-Run
- ↕ 46: Status_ C2 Run/Stop [DPT_1.010] - 0-Stop;1-Run

To activate or deactivat the 2nd circuit (C2) a “1” value or a “0” value needs to be sent respectively to the Run/stop communication object.

- If “Water” mode is selected

- ↕15: Control_ C2 Heat OTC Mode Off [DPT_1.002] - 1-Set OTC Mode OFF
- ↕16: Control_ C2 Heat OTC Mode Points [DPT_1.002] - 1-Set OTC Mode POINTS
- ↕17: Control_ C2 Heat OTC Mode Grad [DPT_1.002] - 1-Set OTC Mode GRAD
- ↕18: Control_ C2 Heat OTC Mode Fix [DPT_1.002] - 1-Set OTC Mode FIX
- ↕19: Control_ C2 Cool OTC Mode Off [DPT_1.002] - 1-Set OTC Mode OFF
- ↕20: Control_ C2 Cool OTC Mode Points [DPT_1.002] - 1-Set OTC Mode POINTS
- ↕21: Control_ C2 Cool OTC Mode Fix [DPT_1.002] - 1-Set OTC Mode FIX
- ↕24: Control_ C2 Water Heat Setpoint [DPT_9.001] - °C
- ↕25: Control_ C2 Water Cool Setpoint [DPT_9.001] - °C
- ↕47: Status_ C2 Heat OTC Mode Off [DPT_1.002] - 1-OTC Mode OFF is set
- ↕48: Status_ C2 Heat OTC Mode Points [DPT_1.002] - 1-OTC Mode POINTS is set
- ↕49: Status_ C2 Heat OTC Mode Grad [DPT_1.002] - 1-OTC Mode GRAD is set
- ↕50: Status_ C2 Heat OTC Mode Fix [DPT_1.002] - 1-OTC Mode FIX is set
- ↕51: Status_ C2 Cool OTC Mode Off [DPT_1.002] - 1-OTC Mode OFF is set
- ↕52: Status_ C2 Cool OTC Mode Points [DPT_1.002] - 1-OTC Mode POINTS is set
- ↕53: Status_ C2 Cool OTC Mode Fix [DPT_1.002] - 1-OTC Mode FIX is set
- ↕56: Status_ C2 Water Heat Setpoint [DPT_9.001] - °C
- ↕57: Status_ C2 Water Cool Setpoint [DPT_9.001] - °C

- If “Air” mode is selected:

- ↕22: Control_ C2 Thermo Setpoint [DPT_9.001] - °C
- ↕23: Control_ C2 Ambient Temp [DPT_9.001] - °C
- ↕54: Status_ C2 Thermo Setpoint [DPT_9.001] - °C
- ↕55: Status_ C2 Ambient Temp [DPT_9.001] - °C

- If “Full” mode is selected, all communication objects present when selecting “Water” or “Air” will be enabled for this mode too.

4.2.3 DHW is available (Domestic Hot Water)

This parameter enables or disables the Control_ and Status_ objects corresponding to the control and monitoring of a water tank or DHW system.

When selecting “No”, the gateway will hide communication objects related with the water tank or the Domestic Hot Water system.

When selecting “Yes”, the gateway will show the communication objects related with the water tank or the Domestic Hot Water system.

- Domestic hot water

By means of Control_ DHW Run/Stop and Control_ DHW Setpoint, it is possible to turn on/off the DHW system and also to control its setpoint temperature.

Through the Status_ DHW Temperature communication object, it is possible to read the instantaneous temperature of the DHW system.

- ↕ 26: Control_DHW Run/Stop [DPT_1.010] - 0-Stop;1-Run
- ↕ 27: Control_DHW Setpoint [DPT_9.001] - °C
- ↕ 58: Status_DHW Run/Stop [DPT_1.010] - 0-Stop;1-Run
- ↕ 59: Status_DHW Setpoint [DPT_9.001] - °C
- ↕ 60: Status_DHW Temperature [DPT_9.001] - °C

4.2.4 Swimming pool is available

This parameter enables or disables the Control_ and Status_ objects corresponding to the control and monitoring of a swimming pool system present in the project.

When selecting “No”, the gateway will hide communication objects related with the swimming pool.

When selecting “Yes”, the gateway will show communication objects related with the swimming pool.

- Swimming pool

By means of Control_ SwimPool Run/Stop and Control_ SwimPool Setpoint, it is possible to turn on/off the Swimming pool system and also to control its setpoint temperature.

Through the Status_ SwimPool Temperature communication object, it is possible to read the instantaneous temperature of the Swimming pool system.

- ↕ 28: Control_SwimPool Run/Stop [DPT_1.010] - 0-Stop;1-Run
- ↕ 29: Control_SwimPool Setpoint [DPT_9.001] - °C
- ↕ 61: Status_SwimPool Run/Stop [DPT_1.010] - 0-Stop;1-Run
- ↕ 62: Status_SwimPool Setpoint [DPT_9.001] - °C
- ↕ 63: Status_SwimPool Temperature [DPT_9.001] - °C

4.2.5 Enable use of extra information objects (for status)

These parameters enable or disable the Status_ communication objects related to the monitoring of extra information depending on the installed Hitachi model (Yutaki S or Yutaki S80).

When selecting “No”, the gateway will hide communication objects related with the extra information provided by the Hitachi units.

When selecting “Yes”, the gateway will offer you to select extra information for a Yutaki S80 model or the rest of Yutaki S models (then select “No”).

- If “No” is selected (the installed unit is not a Yutaki S80 model) communication objects providing extra information about the Yutaki S models will appear:
