HITACHI

Specifications in this catalogue are subject to change without prior notice in order for HITACHI to bring in the latest innovations to their customers

Whilst every effort is made to ensure that all dimensions and specifications are correct, any printers' error not rectified are outside the control of HITACHI, who cannot be held responsible for the same

CONTENTS

CONTENTS 1

1 SYSTEM DESCRIPTION 1-1
1.1 LINE UP 1-2
1.1.1 MONOZONE/MULTIZONE 1-2
1.1.2 MONO SPLIT 1-3
1.2 FEATURES AND BENEFITS 1-4
1.2.1 MONO INVERTER - PREMIUM 1-5
1.2.2 WALL TYPE 1-8
1.2.3 FLOOR TYPE 1-9
1.2.4 4 WAY CEILING CASSETTE TYPE 1-10
1.2.5 DUCT TYPE 1-11
1.2.6 FILTERS 1-14
1.3 SYSTEM CONTROL FEATURES 1-17
1.3.1 NEW WIRELESS REMOTE CONTROLLER WITH WEEKLY TIMER 1-18
1.3.2 Additional Function via DIP-Switch Settings 1-22
1.3.3 DRY CONTACT APPLICATION (USING DIP SWITCH) 1-23
1.3.4 DRY CONTACT APPLICATION (USING JUMPER WIRE) 1-26
1.3.5 FUNCTION SUMMARY FOR MONO SPLIT 1-28
1.3.6 FUNCTION SUMMARY FOR MONOZONE/MULTIZONE 1-29

2 GENERAL DATA 2-1
2.1. MONOZONE / MULTIZONE 2-2
2.1.1. WALL TYPE (RAK-18QXA/25QXA/35QXA/50QXA) 2-2
2.1.2. WALL TYPE (RAK-18QPA/25QPA/35QPA/50QPA) 2-3
2.1.3. CEILING CASSETE (RAI-25RPA/35RPA/50RPA) 2-4
2.1.4. DUCT TYPE (RAD-18RPA/25RPA/35RPA/50RPA) 2-5
2.1.5. FLOOR TYPE (RAF-25QXA/35QXA/50QXA) 2-6
2.1.6. FLOOR TYPE (RAF-25RPA/35RPA/50RPA) 2-7
2.1.7. MONOZONE OUTDOOR (RAC-25NPA/35NPA/50NPA) 2-8
2.1.8. MULTIZONE OUTDOOR (RAM-36NP2A/53NP2A/53NP3A/68NP3A/70NP4A/90NP5A/130NP6A) 2-9
2.2. MONO SPLIT 2-11
2.2.1. WALL TYPE (RAK-18PSA/25PSA/35PSA) 2-11
2.2.2. WALL TYPE (RAC-18WSA/25WSA/35WSA) 2-12
2.2.3. WALL TYPE (RAK-18PSAN/25PSAN/35PSAN) 2-13
2.2.4. WALL TYPE (RAC-18WSAN/25WSAN/35WSAN) 2-14
2.2.5. WALL TYPE (RAK-18PSPA/25PSPA/35PSPA) 2-15
2.2.6. WALL TYPE (RAC-18WSPA/25WSPA/35WSPA) 2-16
2.2.7. WALL TYPE (RAK-25PXA/35PXA/50PXA) 2-17
2.2.8. WALL TYPE (RAC-25WXA/35WXA/50WXA) 2-18
2.2.9. WALL TYPE (RAK-18PPA/25PPA/35PPA) 2-19
2.2.10. WALL TYPE (RAC-18WPA/25WPA/35WPA) 2-20
2.2.11. WALL TYPE (RAK-50PPA/60PPA/70PPA) 2-21
2.2.12. WALL TYPE (RAC-50WPA/60WPA/70WPA) 2-22

1.1 LINE UP

1.1.1 MONOZONE/MULTIZONE

■ Various Indoor units and combinations

The new line-up of new Monozone/Multizone series indoor units has been extended up to 6 indoor units in 27 types to find various building requirements.

MULTIZONE Combinations

Indoor Unit Type	Nominal Cooling Capacity (kW)			
	*1.2↔1.8	2.5	3.5	5.0
RAK -QXA	O	O	O	O
RAK -QPA	O	O	O	O
RAI-RPA	-	O	O	O
RAD-RPA	O	O	O	O
RAF-QXA	-	O	O	O
RAF-RPA	-	O	O	O

O: AVAILABLE

*Note: RAD-RPA is not available for 1.2kW connection.

MONOZONE Combinations

Indoor Unit Type	Nominal Cooling Capacity (kW)		
	2.5	3.5	5.0
RAD-RPA	O	O	O
RAI-RPA	O	O	O
Outdoor Unit	**Nominal Cooling Capacity (kW)**		
	2.5	3.5	5.0
RAC-NPA	O	O	O

O: AVAILABLE

■ Minimum and maximum combination of Outdoor and Indoor Units

Outdoor Unit Model	Indoor Unit				
	Minimum Combination Kilowatt (kW)	Maximum Combination Kilowatt (kW)	Minimum Combination of Indoor Unit	Maximum Combination of Indoor Unit	Minimum Individual Operation Kilowatt (kW)
RAM-36NP2A	2.4↔3.6	6.0	2	2	*1.2↔1.8
RAM-53NP2A	2.4↔3.6	8.5	2	2	*1.2↔1.8
RAM-53NP3A	2.4↔3.6	8.8	2	3	*1.2↔1.8
RAM-68NP3A	2.4↔3.6	11.2	2	3	*1.2↔1.8
RAM-70NP4A	2.4↔3.6	11.2	2	4	*1.2↔1.8
RAM-90NP5A	2.4↔3.6	15.7	2	5	*1.2↔1.8
RAM-130NP6A	4.8↔6.4	17.6	4	6	*1.2↔1.8

1) In case that RAM-36/52NP2A, 52/68NP3A, 70NP4A, and 90NP5A is used, the minimum quantity of indoor unit to be connected shall be 2
2) In case that RAM-130NP6A is used, the minimum quantity of indoor units to be connected shall be 4.
3) Simultaneous operation of cooling (dry) and heating is not available

* Cooling capacity 1.2kW /Heating capacity 1.8kW is a guide when the nominal capacity (Cooling capacity 1.8kW/Heating capacity 2.5kW) is reduced with the selector switch. The values are not to be taken as exact

1.1.2 MONO SPLIT

Indoor Unit Type	Nominal Cooling Capacity (kW)

1.2 FEATURES AND BENEFITS

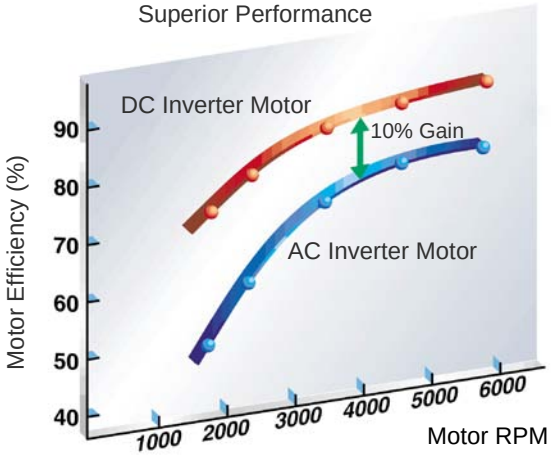

■ High economical efficiency operation

HITACHI uses the high technology to achieve the high operation efficiency. The applications of the following technologies provide HITACHI to achieve results like the great power saving due to heat recovery system.

■ All PAM Inverter

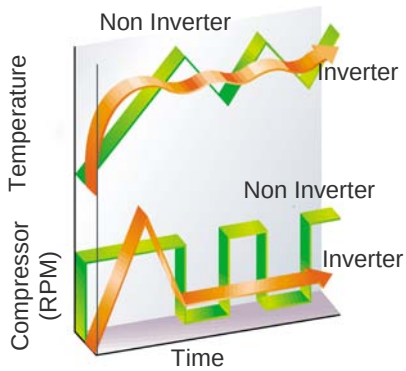

Inverter driven systems have a big performance advantage over constant speed systems. The variable compressor can make a very fast start-up and reach the setting temperature rapidly, then reduce the rotation speed to achieve energy savings of about 30% with no loss of comfort. Moreover, only Hitachi's DC driven fans and compressors deliver about 10% better performance than AC inverters. HITACHI is the world's pioneer of DC inverter systems and PAM in room air conditioners.

Superior Performance

■ Inverter Control

Hitachi's PAM control system is able to keep the current pulse waveform to avoid distortion. It enhances the power efficiency. The cutting edge device is employed in HITACHI MONOZONE/MULTIZONE for your comfort and energy saving for our environment.

Rapid start up

The variable speed compressor (inverter) enables the system to rapidly reach the desired room temperature setting.

Once the desired room temperature has been achieved, the compressor rotation speed is reduced, saving up to 30% in energy usage (when compared to conventional systems) without compromising comfort levels

■ High performance, heating at –15°C

HITACHI's PAM inverter system achieves the effective utilization of power input and minimizes loss less than 1%. You can enjoy high COP, top class in industry. Especially heating performance is improved and you can enjoy heating comfort even at -15°C degree ambient temperature

■ Auto-Restart -

The Auto-restart mode comes as a standard feature and the unit automatically resumes operation in the previous mode after power resume from failure.

■ Auto Changeover

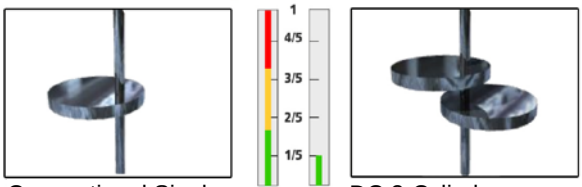

The built-in microcomputer continuously selects the best operating mode automatically to provide maximum comfort, based on the set temperature and measurements taken by a sensor.

■ DC 2-Cylinder Rotary compressor

Hitachi's DC 2-Cylinder rotary compressor has less vibration and higher efficiency than conventional rotary compressors

- Two rotating cylinders ensure well-balanced rotations unlike the conventional single rotary type, thus vibration noise is greatly reduced.
- The compressor's operation is improved by moving two independent cylinders efficiently

Comparison of Vibration

Conventional Single Rotary

DC 2-Cylinder Rotary

■ Easy servicing

Self-diagnosis

- In case failure occurs to the air conditioner, by pressing (INFO) button of the remote controller, an error code will be displayed.

1.2.1 MONO INVERTER - PREMIUM

■ High Efficient Inverter System

Vector control and high efficient motor achieve energy saving and high power operation.
Hitachi uses vector control as an inverter operation system. This enables gradual control of motor rotation rate and electric current, so that the compressor performs highly stable operation in all rotation area and high power in high rotation area.

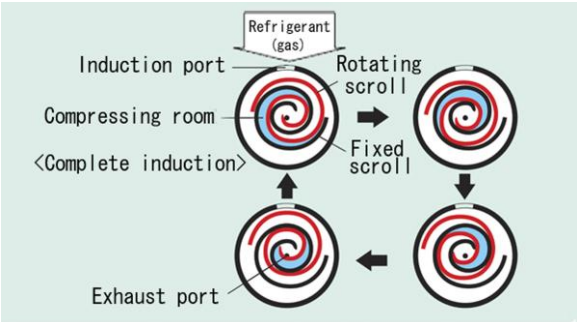

In addition, Hitachi compressor applies high efficient motor. The compressor values efficiency in low rotation area where operation frequency is high.
By these mechanisms, energy saving and high power operation have been achieved.

■ High Efficient Scroll Compressor

Hitachi scroll compressor achieves both energy saving and high power operation at the same time.

Whirlpool scroll shape has been improved to reduce efficiency loss during operation. Since two whirlpool wings operate induct, compress and exhaust process smoothly, the scroll is both powerful and efficient.

The scroll shape improvement also contributes to decrease refrigerant leakage loss.

■ Heating Operation

- **Heating Capacity**

  Our new premium series can keep heating capacity up to outside temperature of -15℃.

- **Improvement of Unit Structure**

  Increase the area of outdoor heat exchanger to increase volume of air flow. Our new premium series' outdoor heat exchanger area is larger by more than 1.5 times compared to our previous model. This structure improvement contributes to decrease de-frost operation time and increases continuous heating operation time.

■ ECO Sensor

- **Detect Your Movement Level**

  Two compound lenses watch the movement level of people in the room to operate under less electricity consumption mode. The degree of detection is 140°.

  - When heating, if activity level is high, sensor detects the condition and automatically shifts room temperature lower to operate under less energy consumption mode.
  - When cooling, if activity level is low, sensor detects the condition and automatically shifts room temperature higher to operate under less electricity consumption mode.

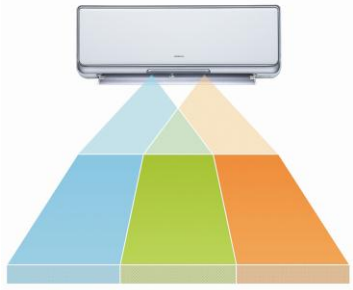

Two Compound Lenses Watch Movement

- **Detect Your Location**

  Two compound lenses recognize the space of the room dividing into 3 sections to locate position of people in the room. Then, either direct airflow or in-direct airflow mode can be selected for your comfort.

Two Compound Lenses Watch 3 Areas

Direct Airflow or In-direct Airflow can be selected

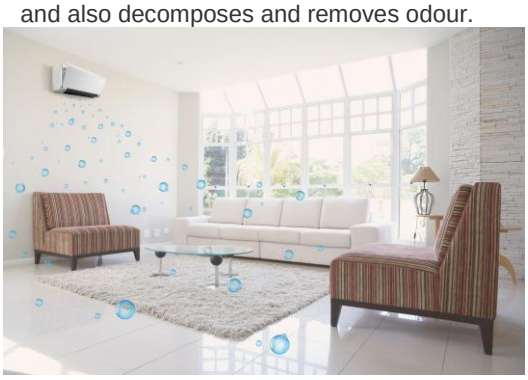

Ionized Mist

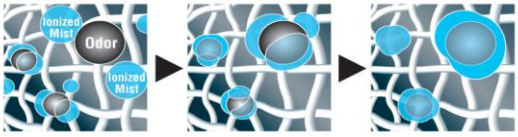

• Keep Your Room Clean with Ionized Mist

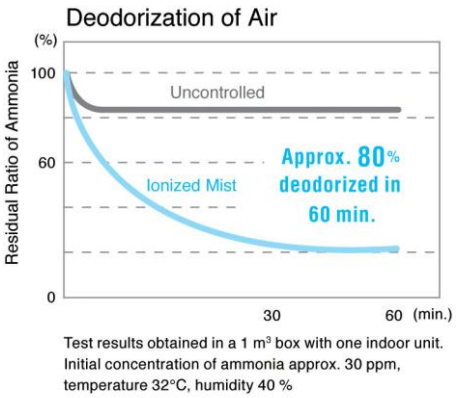

An ion generator installed in the unit generates ultrafine nano-size ionized mist, which is carried throughout the room by the air from the air conditioner. This ionized mist surrounds and suppresses virus, bacteria and fungi by 99.99%, and also decomposes and removes odour.

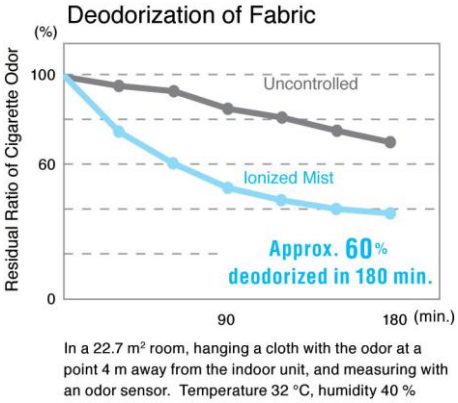

• Deodorizing Effects

The nano-sized ionized mist decomposes and removes cooking, cigarettes and pet odours, and even the odours ingrained into clothing or curtains.

Test results obtained in a 1 m³ box with one indoor unit. Initial concentration of ammonia approx. 30 ppm, temperature 32°C, humidity 40 %

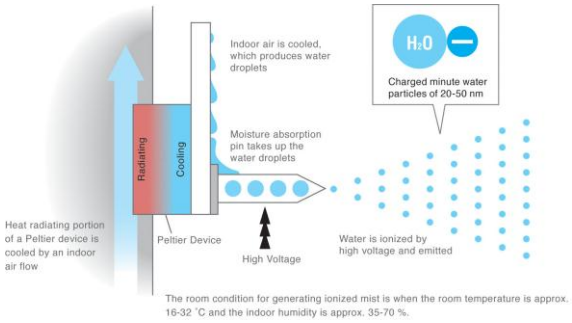

In a 22.7 m² room, hanging a cloth with the odor at a point 4 m away from the indoor unit, and measuring with an odor sensor. Temperature 32 °C, humidity 40 %

• Ionized Mist Generator

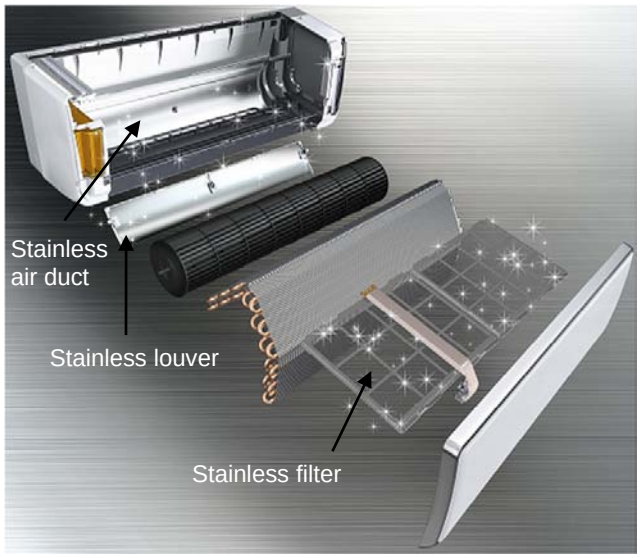

Applying the principle of beading on glass with iced water, inside the air conditioner water is produced from the air in the room. The water droplets are ionized with a high voltage, and emitted into the room. No water supply is necessary.

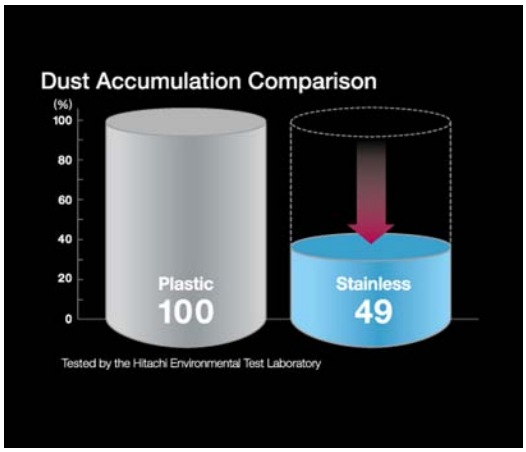

■ Stainless Clean

- **Dust Free**

Dust attachment tests have shown that 51% less dust sticks to stainless material than to plastic. Which means twice the cleanliness and half the cleaning time.

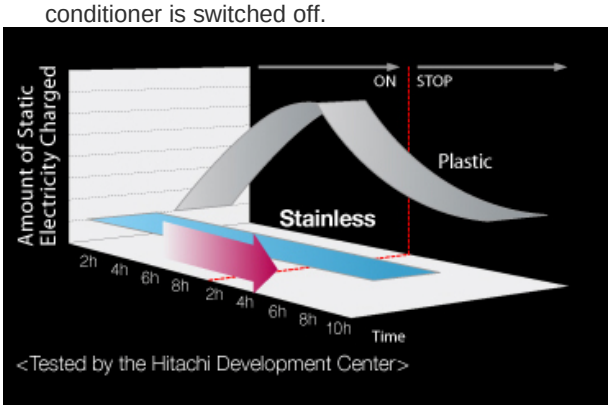

- **Sleek Surface**

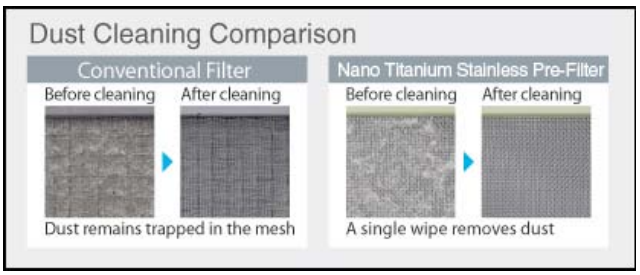

Compared to conventional plastic material, stainless material has a flatter, sleeker surface that thoroughly prevents dust from sticking.

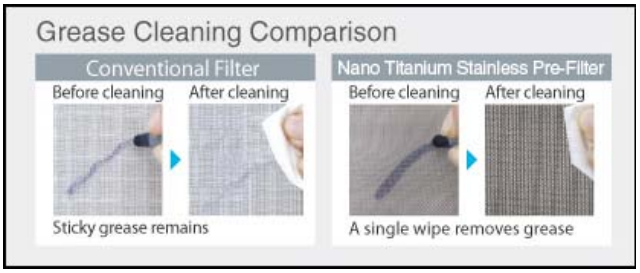

- **Less Static Electricity**

The static electricity often generated by friction between plastic surfaces and air passing through is the biggest cause of dust accumulating inside an air conditioner. Tests have proved that stainless steel generates almost no static electricity during operation and when the air conditioner is switched off.

- **Easy to Clean**

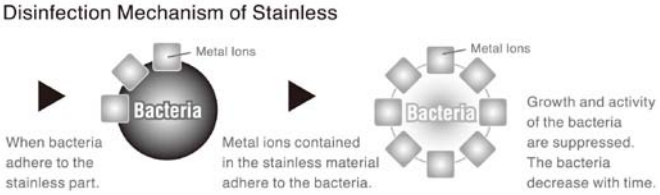

- **Micro Mesh Stainless Pre Filter**

Contamination resistant micro mesh stainless filter. Even greasy contaminants can be removed with a quick wipe. As it is stainless, it has a disinfection effect. With auto filter cleaning.

Micro Mesh Stainless Filter

1.2.2 WALL TYPE

■ Quiet Operation

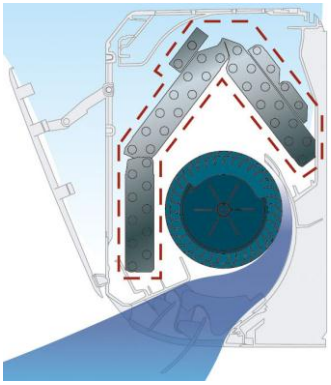

The trapezoidal blades cut the air diagonally to minimize air resistance, and conical blade fan ensures a high airflow.

The larger fan diameter can produced low noise yet higher airflow with slow rotation

New Conical blade fan

■ Efficient

Lambda-shaped heat exchanger with advanced design for wide suction area and a high performance adjusts the room temperature quickly, achieving COP. The flat panel design grill and larger top suction area also increase the efficiency of heat exchange with the concentrated opening area, to improve the efficiency of air intake.

■ Wide Flow Anti-Bacterial Tangential Fan

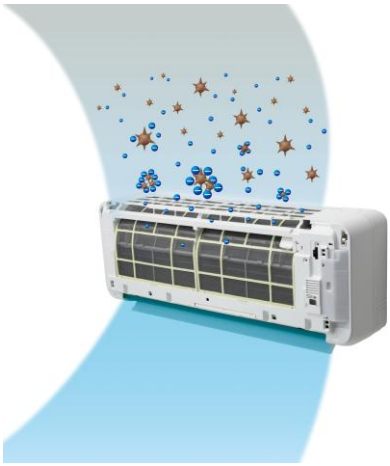

The conical blade fan with less air resistance and bigger tangential fan draws a larger volume of air flow to distribute the cool air evenly and quietly.

It is also anti-bacterial treated to prevent bacterial and mold growth, ensuring only clean air is supplied for healthy living.

■ Plasma Air Purifying System

Equipped with a plasma ion unit to capture the finest and microscopic dust and eliminate bacteria.

■ Powerful

Newly developed super big flap delivers air quickly to every corner of the room, and the powerful, sweeping airflow eliminated dead zones and improves the cooling and heating effect.

1.2.3 FLOOR TYPE

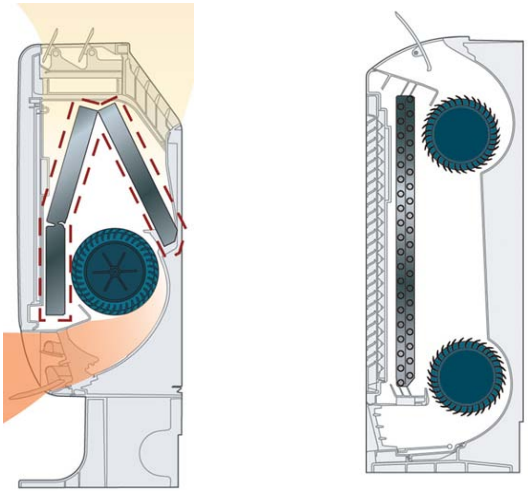

RAF-QXA, RAF-PXA

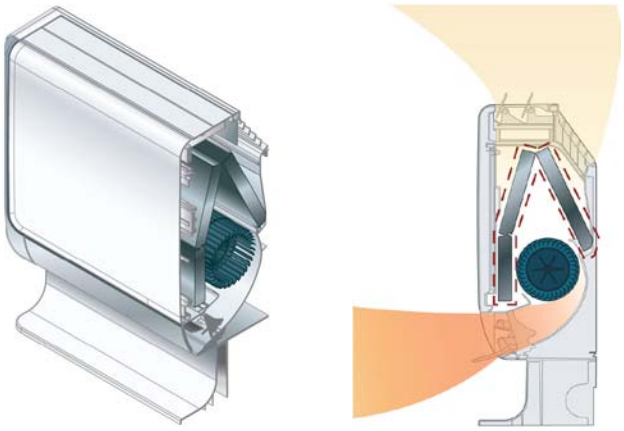

■ **Higher performance**

A lambda shaped design provides a larger and wider area for heat exchanger thus ensuring high performance.

Current model **Previous model**

■ **Comfortable cooling and heating**

•Air Flow Control System (lower blowing type)

During heating mode, the warm air is directed to stay well controlled at floor level. Whereas during the cooling mode, cool air is distributed to the whole room to prevent direct cold blast onto the person body.

■ **Extended Air Flow**

With dynamic extended airflow, the airflow could reach further to the corners of the room. Your room can be efficiently warmed or cooled with conveniently simple push of button on the remote control.

RAF-RPA

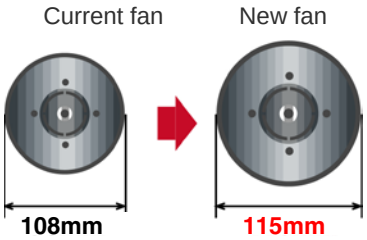

■ **Comfortable**

Large and gentle air flow is generated by the larger upper blades, achieving efficient air-conditioning.

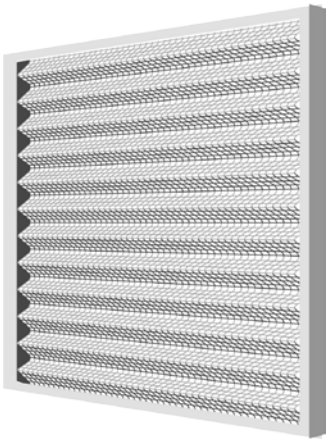

■ **High performance**

The larger blade fan than normal rotates sufficient airflow slowly, thus achieving high efficiency and low noise

■ **Easy Cleaning**

You can remove Stainless pre-filter easily for washing or you can clean directly by vacuum cleaner. The filter catch 3 times more dust due to its wave shape, so you do not have to clean so often.

1.2.4 4 WAY CEILING CASSETTE TYPE

■ **Silent**

Noise level is just 25dB (Sleep mode) thanks to the 3D-twisted wing design of the compact turbo-fan.

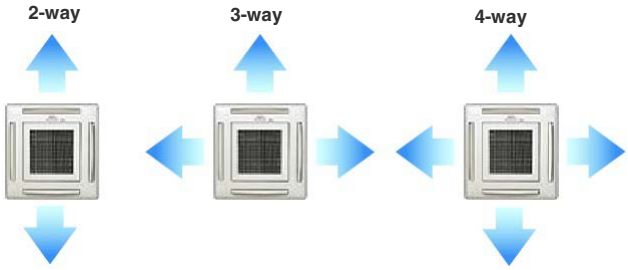

.

■ **Automatic Swing Louver**

Optionally, this unit is equipped with an automatic swing louver to ensure even distribution of conditioned air to the entire room.

■ **4 -Way Airflow**

It can be selected among 2-way, 3-way or 4-way operation.

■ **Fits into a 600mm x 600mm ceiling module**

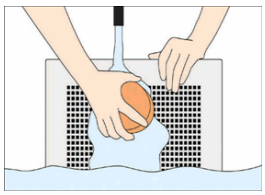

Thanks to compact design, it neatly fits inside a standard module and requires less installation work

■ **One-touch panel**

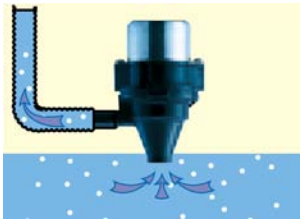

The panel can be swung open up to 90° with just one push so that the filter can be removed for cleaning.

Grill can be removed for cleaning

■ **Built-in Drain Pump**

The air conditioner is equipped with an internal drain pump to remove accumulated condensed water from drain pan even while it is operating. A float switch monitors the water level and automatically activates the pump as necessary

■ **Elegant Design**

The gently contoured standard air panel is less than 4 cm. It is tastefully designed to blend with any interior while delivering a maximum flow of air. The 32 cm profile of the hidden ceiling unit is low enough to allow unfettered installation in almost any building.

1.2.5 DUCT TYPE

RAD-RPA

■ Quiet Operation

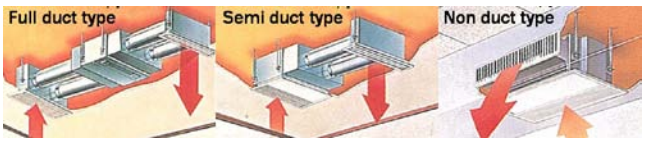

The free duct enables the air inlet and outlet layout system to be freely chosen depending on the building structure and room width, thus keeping your room looking beautiful.

Unlike conventional units, the noise level has been reduced to an exceptionally low 30dB-A (1.0HP unit, Low position). Ideal wherever quiet operation is important.

■ Neatly installable in any room

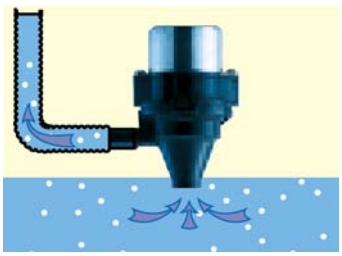

Duct length is extendable for up to 4m. High-pressure switch setting delivers sufficient air conditioning even by duct installation.

Variation in installation

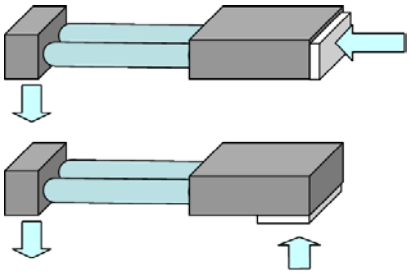

■ Built-in drain pump

This air conditioner is equipped with an internal drain pump to remove accumulated condensed water from the drain pan even while it is operating. A float switch monitors the water level and automatically activates the pump as necessary.

1.2.6 FILTERS

■ Nano Titanium Wasabi Air Purifying Filter

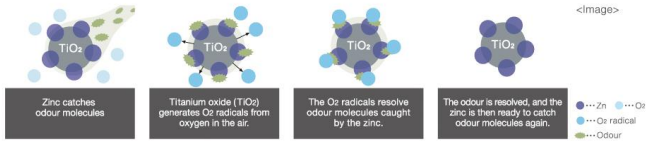

- **How Nano Titanium works**

Incredibly small (about 5nm) and highly dense WASABI modified Nano Titanium particles prevent microbes from going through and deactivate them actively.

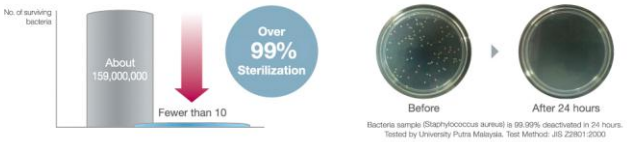

- **Principle of Nano Titanium's Action**

The TiO_2 catalyst has a bacteria deactivation and deodorizing effect.

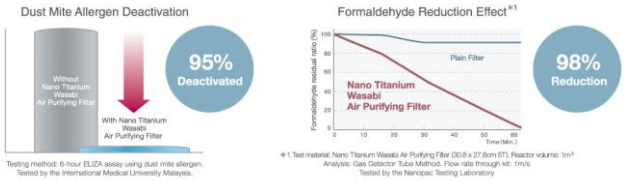

- **Antibacterial**

Hitachi's new Nano Titanium Wasabi Air Purifying Filter has been proven to effectively deactivate over 99% of bacteria.

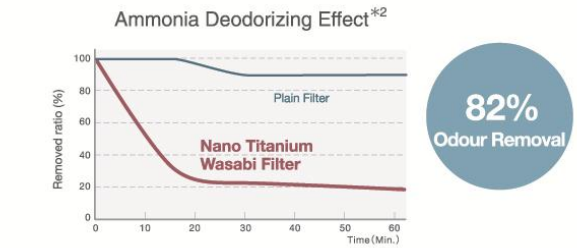

- **Anti-Allergen**

The Nano Titanium Wasabi Air Purifying Filter effectively deactivates harmful allergens such as dust mites and formaldehyde, which may cause allergic diseases such as asthma.

- **Odour Removal**

The Nano Titanium Wasabi Air Purifying Filter thoroughly deodorizes air. Up to 82% removal in only an hour.

*2 Test material: Nano Titanium Wasabi Air Purifying Filter (30.8 x 27.6cm 5T), Reactor volume: 1m³
Analysis: Gas Detector Tube Method. Flow rate through kit: 1m/s
Tested by the Nanopac Testing Laboratory

- **Powerful WASABI Sanitizing**

May seem surprising, the WASABI often seen with Sushi has a powerful sanitizing effect. Hitachi's unique Nano Titanium WASABI filter is coated with WASABI modified Nano Titanium particles to firmly catch and deactivate bacterial, allergen, mold and odour.

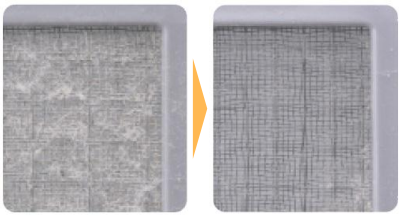

■ Nano Stainless Pre-Filter

Conventional filter

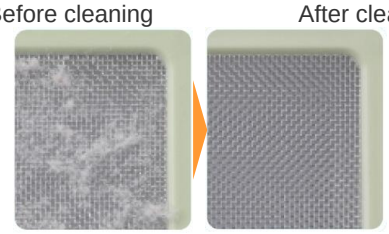

Before cleaning After cleaning

Dirt still clings to the filter

Nano Stainless Pre Filter

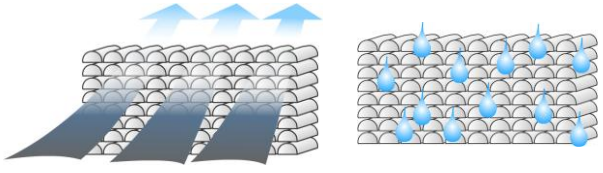

Before cleaning After cleaning

Dirt totally removed.
Looking brand new.

■ Washable Anti Bacteria Pre-Filter

Static electricity and carbon absorb micro dust, pollen particles and odors, and the pre-filter can be washed and re-used up to 20 times.

Breathing structure. Micro-level dust is absorbed by static electricity

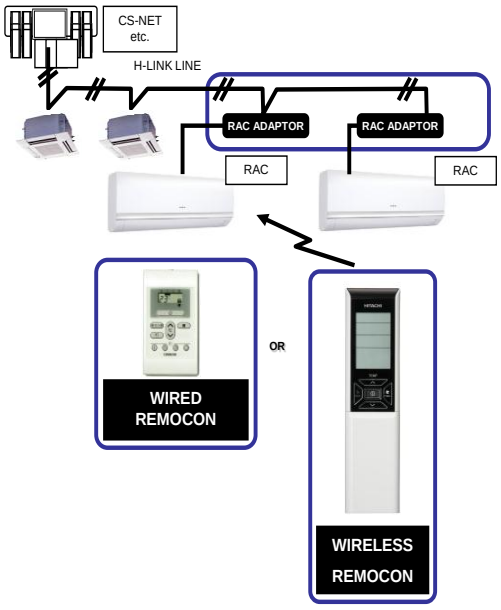

Reusable after washing

■ Distributor – SPX-DST1 (optional)

The optional distributor is to be used together with the wired remote controller when there is a need to centralize the control of multiple indoor units using only a single wired remote controller.

A single distributor could be connected further to 3 separate distributors so that up to 13 units of indoor could be controlled by a single wired remote controller.

1.3.1 NEW WIRELESS REMOTE CONTROLLER WITH WEEKLY TIMER

■ **Weekly Timer Usages**

- 2 modes can be set (e.g. Mode A for Summer season and Mode B for Winter season). So, does not need to shuffle all set by seasons.
- A maximum of 6 timer settings can be set for each day.
- On/Off time and temperature can be set.
- The sequence of ON mode setting with different temperature set is possible. This may prevent users from forgetting turn off the unit when nobody is in the house.
- Operation mode is automatically set to latest operated mode. So it is recommended to operate suitable mode once (e.g. cooling or heating) before setting Weekly Timer.

Example of "Mode A" for Summer season:

	Mon	Tue	Wed	Thu	Fri	Sat	Sun
6:00	❶ ON / 25°C	ON / 25°C	ON / 25°C	ON / 25°C	ON / 25°C	❶ ON / 27°C	
8:00	❷ OFF	OFF	OFF	OFF	OFF		
10:00						❷ OFF	
12:00	❸ ON / 27°C	ON / 27°C	ON / 27°C	ON / 27°C	ON / 27°C		
14:00	❹ OFF	OFF	OFF	OFF	OFF		
16:00							
18:00	❺ ON / 27°C	ON / 27°C	ON / 27°C	ON / 27°C	ON / 27°C	❸ ON / 27°C	
20:00							
22:00	❻ OFF	OFF	OFF	OFF	OFF	❹ OFF	

Example of "Mode B" for Winter season:

	Mon	Tue	Wed	Thu	Fri	Sat	Sun
6:00	❶ ON / 23°C	ON / 23°C	ON / 23°C	ON / 23°C	ON / 23°C	❶ ON / 23°C	
8:00	❷ OFF	OFF	OFF	OFF	OFF		
10:00						❷ ON / 20°C	
12:00	❸ ON / 20°C	ON / 20°C	ON / 20°C	ON / 20°C	ON / 20°C		
14:00	❹ OFF	OFF	OFF	OFF	OFF		❶ OFF
16:00						❸ ON / 21°C	
18:00	❺ ON / 20°C	ON / 20°C	ON / 20°C	ON / 20°C	ON / 20°C	❹ ON / 22°C	
20:00							
22:00	❻ OFF	OFF	OFF	OFF	OFF	❺ OFF	❷ OFF

■ Leave Home (LH)

Prevent the room temperature from falling too much by setting temperature 10°C automatically when no one is at home.

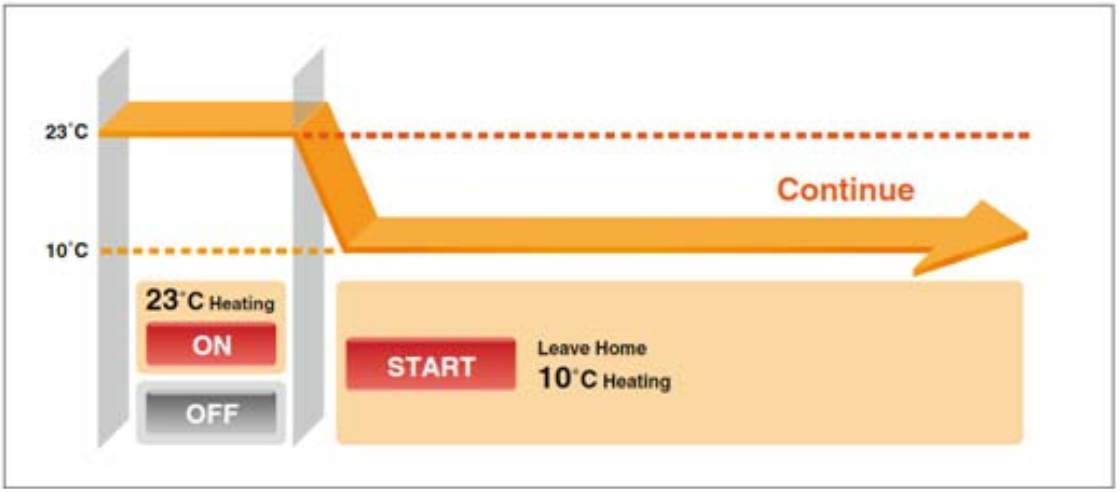

This operation is able to operate by "Continuous operation" or "Day timer operation". Please use "Day timer operation" to set the number of days up to 99 days.

Day Timer Operation (When duration is set)

- After reaching the set days of Leave Home, mode back to the setting before Leave Home operation.
- Depend on outside temperature (weather) or house condition room temperature may not reach to 10°C.

Continuous Operation (When duration is not set)

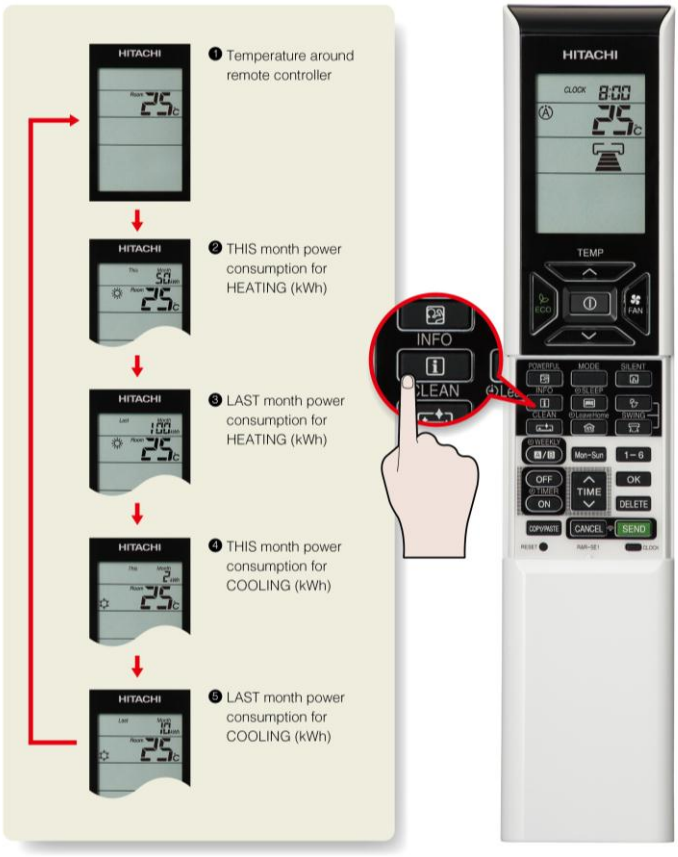

- Depend on outside temperature (weather) or house condition; room temperature may not reach to 10°C.

■ Info

By pressing INFO button, temperature around remote controller and monthly power consumption will be displayed on the remote controller.

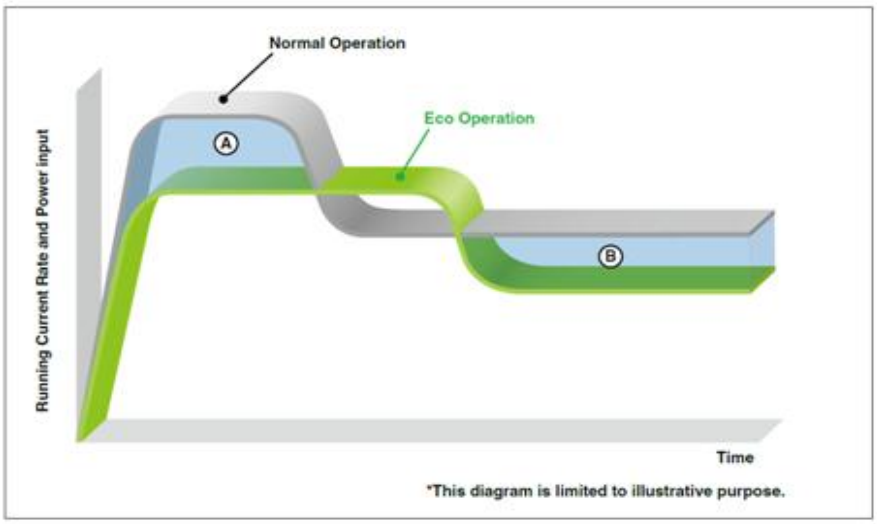

■ INFO

■ ECO

ECO operation is an energy saving function by changing set temperature automatically and by limiting the maximum power consumption value.

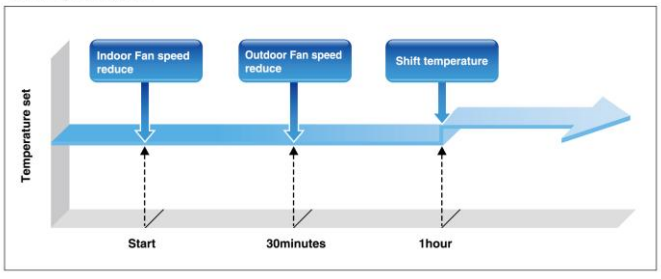

- **Eco Mode Principle**
  When Eco mode is set from the beginning, keep compressor rotation rate lower than normal operation and slightly shift set temperature to save energy consumption Ⓐ.
  If Eco mode is set during other operations, then set temperature is slightly shifted to save energy.
  By shifting set temperature, Eco mode can save energy consumption even better reaching set temperature Ⓑ.
  Energy consumption value is depended on outside temperature, in house temperature, set temperature or type of air conditioning unit.

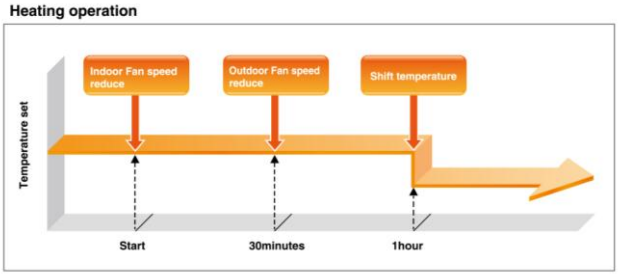

- **Eco Sleep Timer**
  The timer can be set up to duration of 7 hours.
  By pressing SLEEP button during AUTO, HEATING, DEHUMIDIFYING, COOLING and FAN operation, the unit shifts the room temperature and reduces the fan speed. It results in energy saving.

  When sleep timer is set, indoor fan speed will be reduced to operate under silent mode.
  After 30 minutes, outdoor fan speed will also be decreased.
  After 1 hour, set temperature will be slightly shifted.
  Sleep timer can be set for 1, 2, 3, 7 hours.

Cooling operation

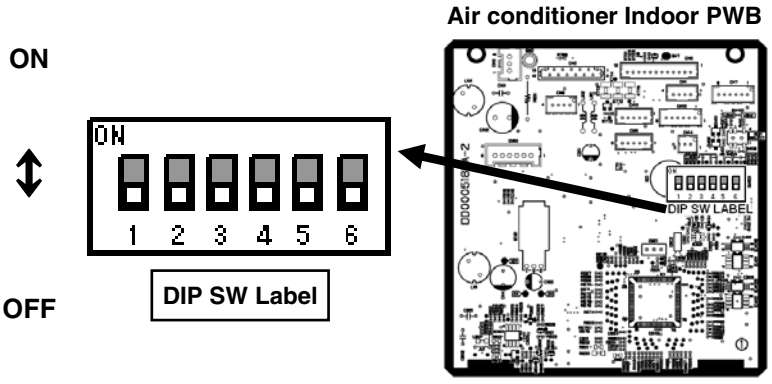

Heating operation

1.3.2 ADDITIONAL FUNCTION VIA DIP-SWITCH SETTINGS

A new DIP Swtich is available on the PWBs of the indoor unit that provide additional functions via the settings on the switches.

Applicable Model	DIP SW Label
RAK-18/25/35PSPA	DSW1
RAK-25/35/50PXA	DSW1
RAK-18/25/35PPA	DSW1

RAD-18/25/35/50RPA	SW501
RAD-50/60/70PPA	SW501
RAI-25/35/50RPA	SW501

Pin No.	Function	Switch Position / Setting					
1	AUTO RESTART function	OFF	Enable	ON	Disable		
2	DRY CONTACT function	OFF	Disable	ON	Enable		
3	DRY CONTACT Logic Select	OFF	HI Input Active	ON	LO Input Active		
4	HEATING / COOLING ONLY MODE SELECT	OFF	NORMAL (HEAT AND COOL)	OFF	HEATING ONLY	ON	COOLING ONLY
5		OFF		ON		OFF	
6	REMOCON ID SELECT	OFF	SELECT ID A	ON	SELECT ID B		

A. Pin No. 1: Auto Restart Function
The AUTO RESTART function can be enabled or disabled by setting Pin No. 1 on the DIP SWITCH above to the ON or OFF position accordingly.

B. Pin No. 2 & 3: Dry Contact Function
Please refer to this chapter section **1.3.3 DRY CONTACT APPLICATION (USING DIP SWITCH)** for more details

C. Pin No.4 & 5: Operation Mode Selection Lock (Heating/Cooling Only Mode Select)
When this function is enabled, the operation mode could be locked to either Heating Only (Heating or Fan) or Cooling Only (Cooling, Fan or Dehumidifying) by setting the Pin No. 4 and 5 accordingly.

LOCKED MODE	REMARKS
HEATING ONLY	Unit will not enter into Cooling mode although cooling mode is selected using the remote controller.
COOLING ONLY	Unit will not enter into Heating mode although heating mode is selected using the remote controller.

D. Pin No.6: Remocon ID Select (to prevent mutual interference of communication signal)
This function is used for selecting the ID communication channel between the wireless remote controller and indoor unit. After setting the ID channel on the pin No. 6, the wireless remote controller also *need* to be changed to corresponding same ID communication channel to ensure correct communication.

Applicable models	Reference for changing ID channel on the wireless remote controller

		RAK-70PPA	SW501	CN7A

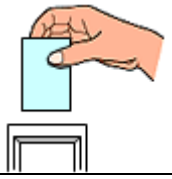

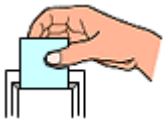

Note:
1) DRY CONTACT function is "Enable" by set pin No. 2 of the DIP SWITCH (refer to table 1 for the label) to ON position.
2) Select the proper setting for DRY CONTACT LOGIC INPUT pin No. 3 on DIP SWITCH (refer to Table 1 for the label)
   i) Set to OFF position (Hi Input) if the type of Dry Contact switch to be used (for the CARD KEY UNIT or Window) is of contact type a (Normally Open Type) as shown in below diagram.
   ii) Set to ON position (Lo Input) if the type of Dry contact switch to be used (for the CARD KEY UNIT or Window) is of contact type b (Normally Close Type) as shown in below diagram.

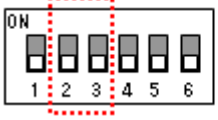

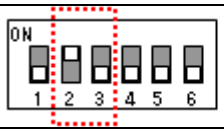

Pin No.	Function	Switch Position / Setting			
2	DRY CONTACT function	OFF	Disable	ON	Enable
3	DRY CONTACT Input Logic	OFF	HI Input Active	ON	LO Input Active

- Please decide the type of dry contact you will be using and set the position of the DIP Switch No. 2 and 3 accordingly

[1] CHECK DRY CONTACT OF CARD KEY UNIT

	AIR CONDITIONER Standby	AIR CONDITIONER Operating
CARD KEY (Door Switch)	REMOVE 	INSERT 
Contact type a	OPEN 	CLOSE 
Contact type b	CLOSE 	OPEN 

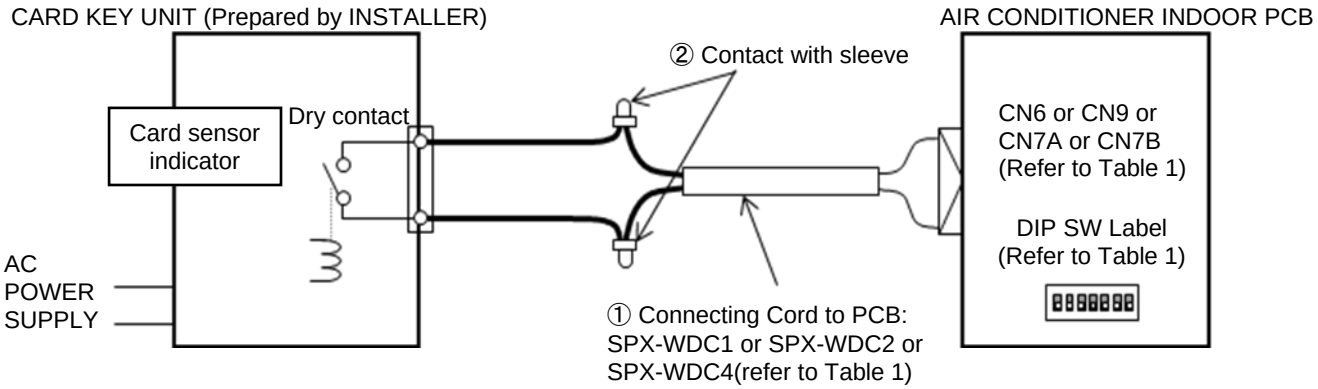

[2] SET THE POSITION OF DIP SWITCH

POSITION CONDITION OF DIP SWITCH	
INITIAL CONDITION (CARD KEY NO USE) 	No.2 : OFF No.3 : OFF
	**HI Input Active** No.2 : ON No.3 : OFF
	**LO Input Active** No.2 : ON No.3 : ON

After all connection has been done as below diagram, ON the breaker and push ON button of wireless remote controller or wired remote controller to operate the air conditioner unit.

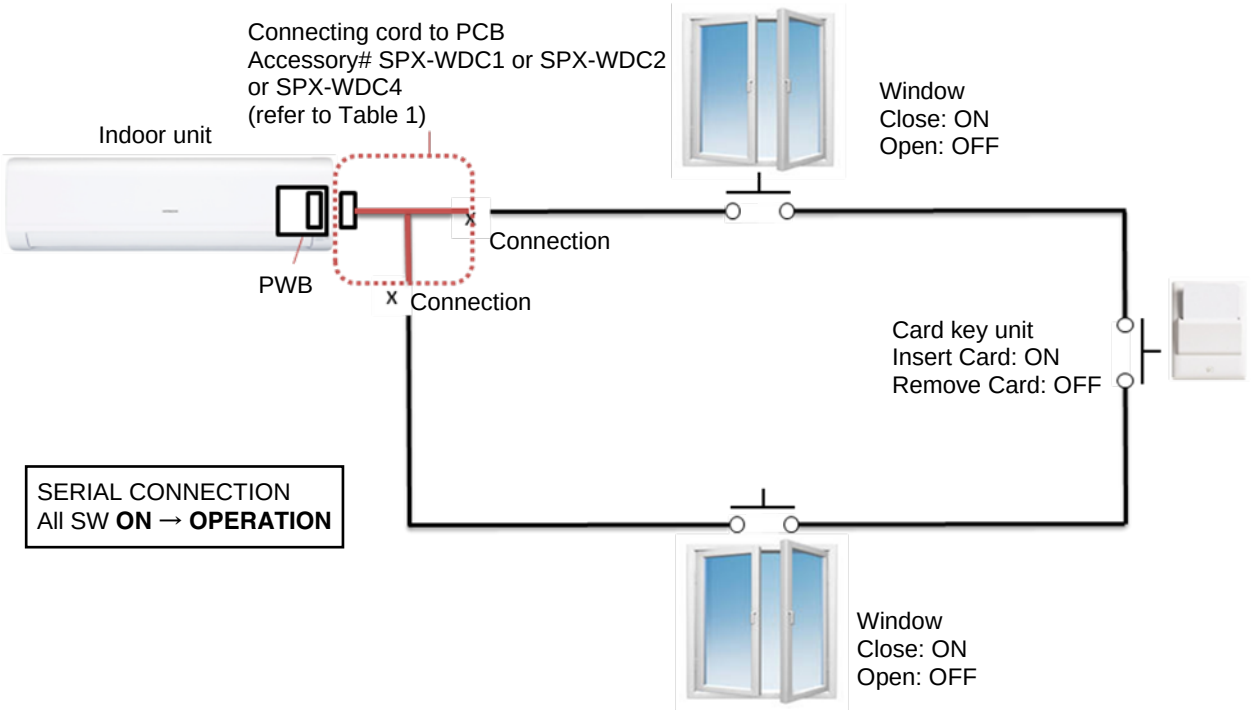

- When the CARD KEY is in insert condition, the air conditioner operation is allowable by remote controller.
- When the dry contact switch on the Card Key Unit is open (refer to diagram below for contact type a), the unit stops to operate (it takes 10 seconds to stop the unit operation after the dry contact switch on the card key turns off) and vice versa.
- When the card key is removed from the Card Key Unit, the wireless remote controller cannot be used.
- When the card key is removed from the Card Key Unit, the wired remote controller LCD display is activated; however it has no control over the unit.
- The suitable accessory Connecting Cord (accessory code#: SPX-WDC1 or SPX-WDC2 or SPX-WDC4) need to be used to connect the Card Key Unit's dry contact switch to the connector on the control board of the indoor unit. Please refer to Table 1 to select suitable accessory code# for the concerning indoor model.

Example of wiring connection to Card Key Unit will be as below (reference only)

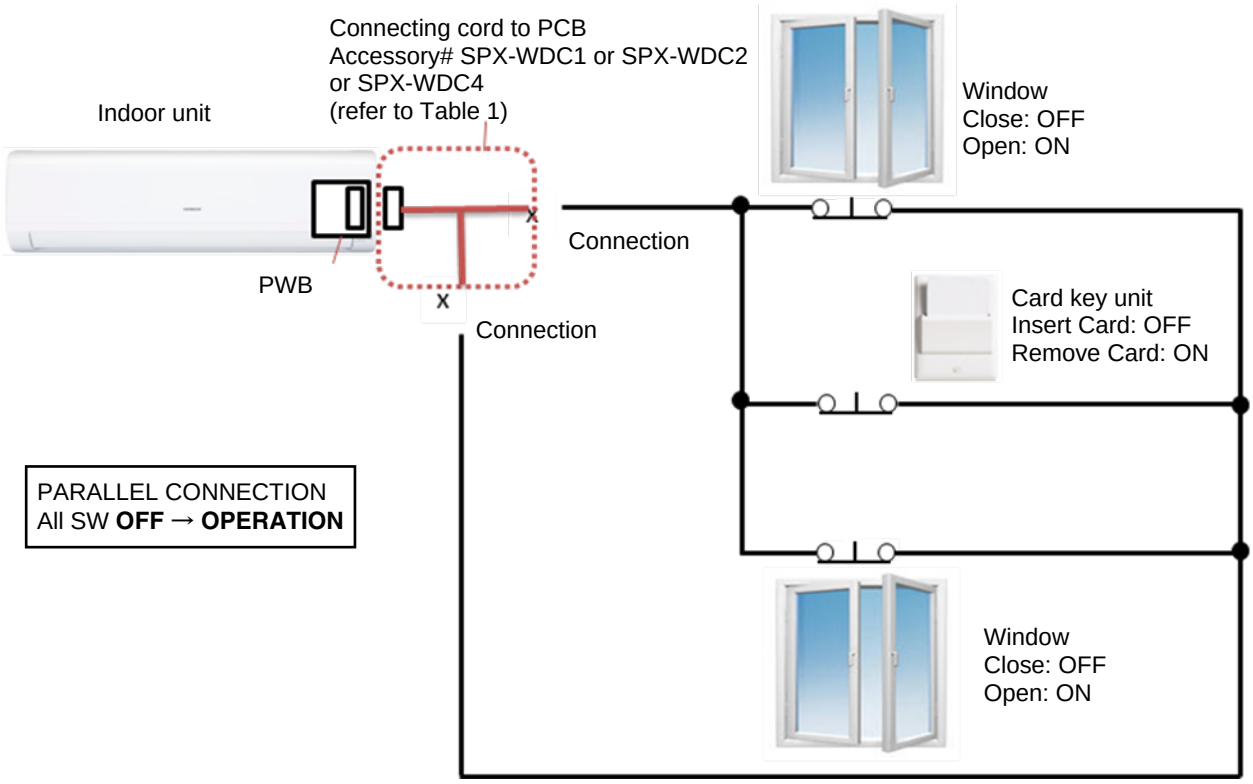

- CONNECTION EXAMPLE

i. Pin No. 3 of DIP SWITCH is set to OFF position (HI Input Active) for Dry Contact Type a

ii. Pin No. 3 of DIP SWITCH is set to ON position (LO Input Active) for Dry Contact Type b

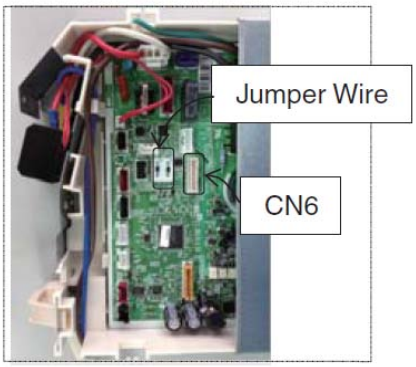

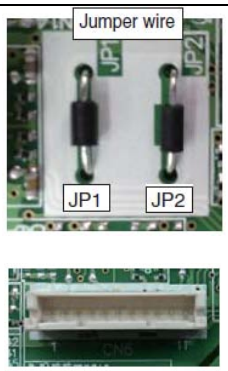

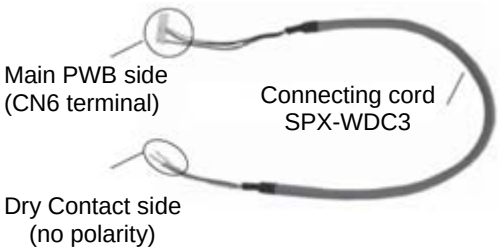

Please refer to the actual manual supplied with the optional connecting cords SPX-WDC1 and SPX-WDC2 for more details.

1.3.4 DRY CONTACT APPLICATION (USING JUMPER WIRE)

Applicable models: RAK-18/25/35PSA

The dry contact system enables the operation of the air conditioner indoor unit to be controlled by using external dry contacts (with non voltage) such as card-key controller or window for facilities such as hotels.

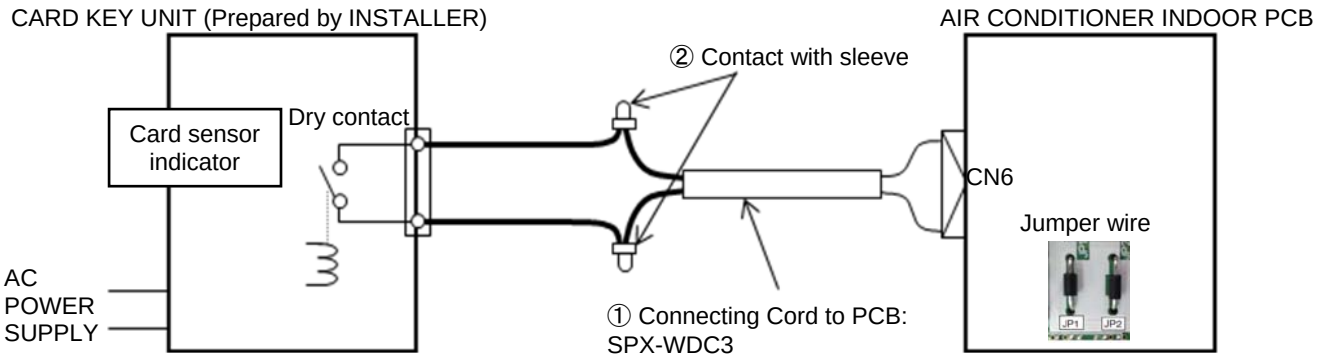

<table>
<tr><th colspan="2">Reference (Main PWB)</th><th>Optional Connecting cord Accessory
SPX-WDC3</th></tr>
<tr>
<td>
</td>
<td>

Connect the connecting cord to Main PWB CN6 (test terminal)</td>
<td>
</td>
</tr>
</table>

Note:
1) Dry contact function will be selected when jumper wire JP1 is “disconnected”.
2) Select whether to disconnect or not to disconnect jumper wire JP2.
   i) Do not disconnect jumper wire JP2 if the type of Dry Contact switch to be used (for the CARD KEY UNIT or Window) is of contact type a (Normally Open Type).
   ii) Disconnect jumper wire JP2 if the type of Dry Contact switch to be used (for the CARD KEY UNIT or Window) is of contact type b (Normally Close Type).

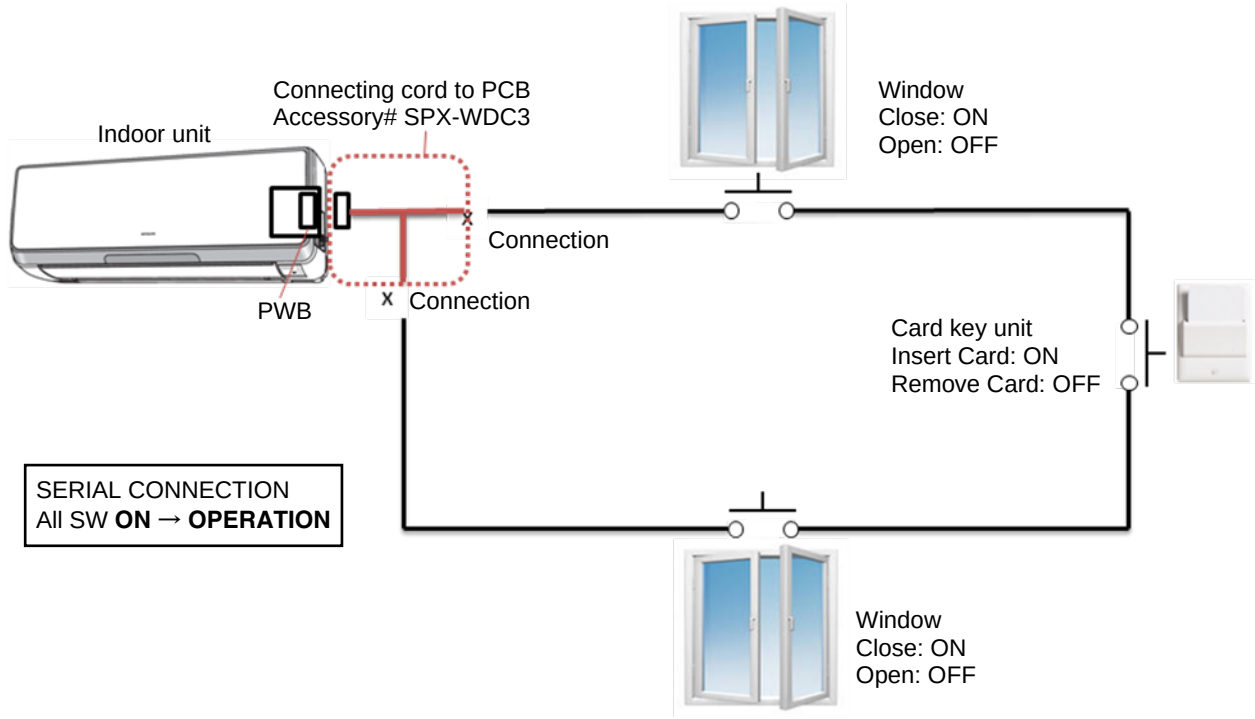

Jumper wire.	Function	Connection setting			
JP1	Dry Contact function	Not disconnect	Disable	Disconnect	Enable
JP2	Type of Contact to be used	Not disconnect	Contact type a	Disconnect	Contact type b

Example of wiring connection to Card Key Unit will be as below (reference only)

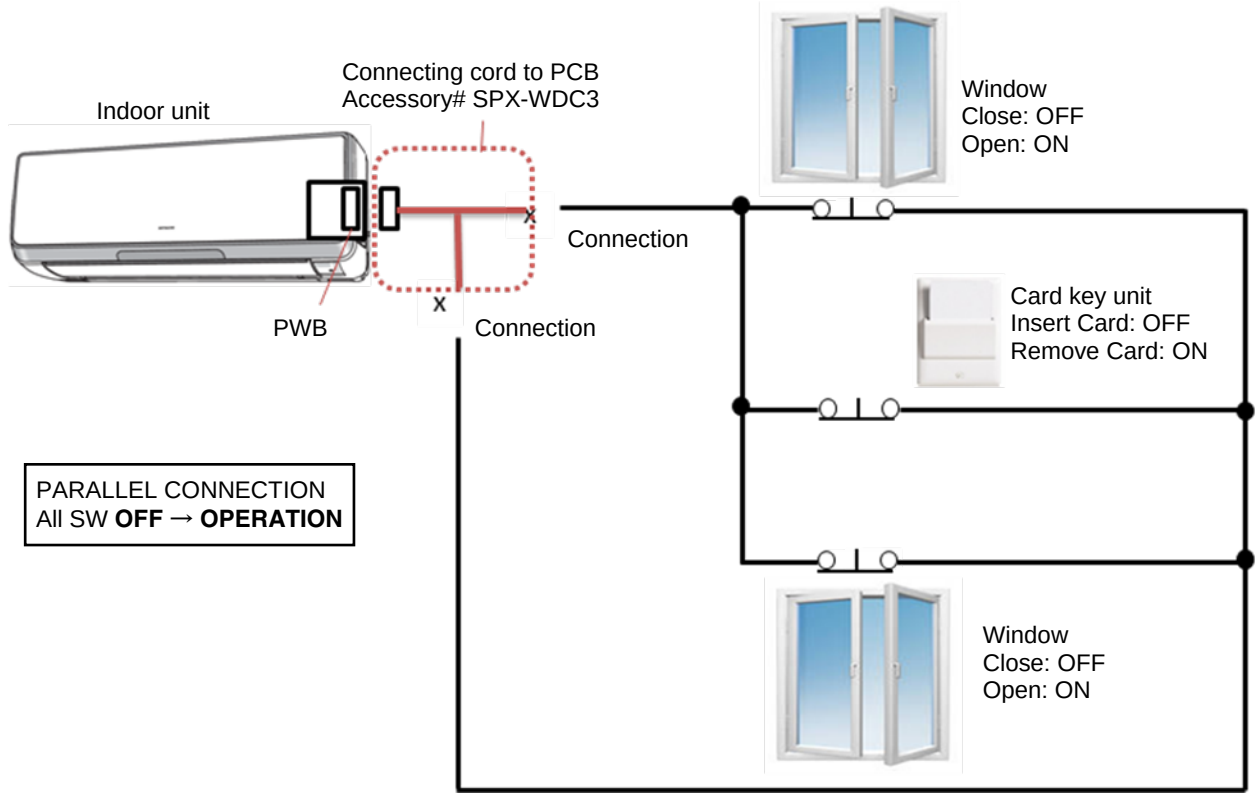

- CONNECTION EXAMPLE

i. Jumper wire JP2 is <u>not disconnected</u> for Dry Contact Type a

ii. Jumper Wire JP2 is <u>disconnected</u> for Dry Contact Type b

Please refer to the actual manual supplied with the optional connecting cord SPX-WDC3 for more details.

*more information regarding remote control can be found in Chapter 9.

NOTE:

1. *The nominal cooling and heating capacity is the combined capacity of the HITACHI standard split system, and are based on the ISO 5151.*

Operation Conditions		*Cooling*	*Heating*
Indoor Air Inlet Temperature	***dB***	*27.0 °C*	*20.0 °C*
	WB	*19.0 °C*	
Outdoor Air Inlet Temperature	***dB***	*35.0 °C*	*7.0 °C*
	WB		*6.0 °C*
***Piping Length**: 5.0 meters; **Piping Lift**: 0 meter* ***dB**: Dry Bulb; **WB**: Wet Bulb*			

2. *The Sound Pressure Level is based on the following conditions:*

- *0.8 meter beneath indoor height center*
- *1 meter from Discharge grille*

The above data was measured in an anechoic chamber. Please take into consideration reflected sound of your specific site

2.1.2. WALL TYPE (RAK-18QPA/25QPA/35QPA/50QPA)

2.2.20. DUCT TYPE (RAC-50DPA/60DPA/70DPA)

OUTDOOR		UNIT	RAC-50DPA	RAC-60DPA	RAC-70DPA
Minimum / Maximum indoor units connectable			-	-	-
Minimum / Maximum connected capacity			-	-	-
Nominal Cooling capacity (min - max)		kW	5.0 (0.9-6.0)	6.0 (0.9-7.0)	7.1 (0.9-8.0)
Nominal Heating capacity (min - max)		kW	6.0 (0.9-7.0)	7.3 (0.9-8.0)	8.0 (0.9-9.0)
Nominal cooling power input (min - max)		kW	1.4 (0.200-2.500)	1.87 (0.200-2.500)	2.53 (0.200-2.920)
Nominal heating power input (min - max)		kW	1.59 (0.200-2.200)	2.13 (0.200-2.600)	2.34 (0.200-3.100)
EER / COP			3.57/3.77	3.21/3.43	2.81/3.42
SEER / SCOP			5.4/3.8	5.1/3.8	5.1/3.8
Energy class (SEER/SCOP)			A/A	A/A	A/A
Noise level cooling (sound pressure)		dB(A)	47	48	53
Noise level heating (sound pressure)		dB(A)	50	51	55
Noise level (sound power)		dB(A)	65	65	67
Air flow (Cooling / Heating)		m^3/h	-/-	-/-	-/-
Static pressure (nominal conditions, maximum)		Pa	-	-	-
Dimensions (H x W x D)		mm	800x850x298	800x850x298	800x850x298
Weight		kg	51.5	55.0	55.0
Colour (Munsell Code)			Beige (5Y 7/2)		
Power supply			220-230V , 1Ph , 50Hz	220-230V , 1Ph , 50Hz	220-240V , 1Ph , 50Hz
Recommended fuse size		A	30	30	30
Starting current		A	10.0	10.0	10.0
Running current		A	6.40-5.90/7.30-6.70	8.55-7.90/9.75-9.00	11.60-10.70/10.70-9.80
Cable section		mm^2	2.000	2.000	2.000
Interconnection between indoor unit and outdoor unit		mm^2	2x2.5 + 2x1.6 or 2.0	2x2.5 + 2x1.6 or 2.0	2x2.5 + 2x1.6 or 2.0
Piping diameter (Liq / Gas)			1/4" / 1/2"	1/4" / 1/2"	1/4" / 5/8"
Minimum piping length		m	5.0	5.0	5.0
Maximum piping length / height difference		m	30 / 20	30 / 20	30 / 20
Current quantity of refrigerant / Chargeless		kg	1.80	1.80	1.80
Chargeless / Additional refrigerant charge		m / g/m	30/-	30/-	30/-
Working range (cooling / heating)		°C	-10 ~ 43 / -15 ~ 21	-10 ~ 43 / -15 ~ 21	-10 ~ 43 / -15 ~ 21
Refrigerant			R410A	R410A	R410A
Condenser Fan			Propeller Fan		
Compressor	Type		2 Cylinder Rotary	2 Cylinder Rotary	2 Cylinder Rotary
	Oil Type		HAF68D1	HAF68D1	HAF68D1
	Oil Charge	ml	480	480	580
	Coil Resistance	ˈΩ	1.05 at 20°C	1.05 at 20°C	1.05 at 20°C
			1.268 at 75°C	1.268 at 75°C	1.268 at 75°C
	Quantity		1	1	1

NOTE:

1. *The Sound Pressure Level is based on the following conditions:*
   - *1.5 meter from the unit front surface and 1.5 meter from floor level*

   The above data was measured in an anechoic chamber. Please take into consideration reflected sound of your specific site

4.1. SYSTEM SELECTION PROCEDURE

The following system procedure is giving a sample regarding unit selection system, indicating how to use all parameters showed in this chapter.

4.1.1. SELECTION UNIT FEATURES

Considering the building distribution, the possible indoor unit position and the available air flow distribution, select the unit features that are giving the best efficiency and comfort to each room.
Decide the Outdoor Unit position getting easy service maintenance and easy refrigerant pipe installation.

Therefore, the maximum indoor unit capacity combined with outdoor unit should be carefully considered for correct indoor unit distribution at each building

4.1.2. SELECTION GUIDE

The following guide giving the method for indoor and outdoor unit selection.

* **Step 1: Determine the system requirements**

Calculate the cooling capacity and heating capacity of each indoor unit according to the following conditions:

Total Load for each room

		Room			
Item		**1**	**2**	**3**	**1+2+3**
Estimated Cooling Load	kW	2.75	4.24	5.35	12.34
Estimated Heating Load	kW	2.90	4.60	6.00	13.50

*Example

Temperature Condition

Cooling	Heating
Outdoor Air Inlet • Dry Bulb: 35.0ºC	Outdoor Air Inlet • Dry Bulb: 7ºC • Wet Bulb: 0ºC
Indoor Air Inlet • Dry Bulb: 27,0ºC • Wet Bulb: 19.5ºC	Indoor Air Inlet • Dry Bulb: 20ºC

*Example

* **Step 2**: **Select Unit Capacity Performance**

The unit kW is selected following the Cooling capacity and Heating capacity showed in the combination table.

* **Step 3**: **Read Selected Capacity Performance**

The unit performance should be calculated considering the following correction factors:
1. Cooling and Heating piping length
2. Outdoor unit performance capacity
3. Indoor unit performance capacity for each room cooling load

Kindly refer to the unit selection combination table for correct capacity performance.

4.1.3. **MONOZONE / MULTIZONE COMBINATION TABLE**

***At least 4 indoor should be connected for RAM-130QH5**

4.2. CAPACITY CHARACTERISTIC CURVES FOR MONOZONE/MULTIZONE

The following charts show the characteristics of outdoor unit capacity, which corresponds with the operating ambient temperature of outdoor unit.
Conditions:
①Pipe length / height difference : 7.5m / 0m
②Indoor fan speed at High mode
③Compressor at rated inverter frequency
④Capacity loss due to white frost and defrost operation is not included.

EWB : Evaporator Wet Bulb temperature (°C)
EDB : Evaporator Dry Bulb temperature (°C)
(°CDB) : Outdoor Unit Inlet Air Dry Temperature (°C)

TC : Total Capacity (W)
SHC : Sensible Heating Capacity (W)
PI : Power Input

4.2.9. **RAM-53NP3A**

COOLING [50Hz, 230V]

(°CDB) : Outdoor Unit Inlet Air Dry Temperature (°C)

TC : Total Capacity (W)
SHC : Sensible Heating Capacity (W)
PI : Power Input

4.2.10. **RAM-68NP3A**

COOLING [50Hz, 230V]

4.4. CORRECTION FACTORS ACCORDING TO PIPING LENGTH

Correction Factor for **Cooling Capacity** according to Piping Length

The cooling capacity should be corrected according to the following formula:

CCA = CC x F

CCA: Actual Corrected Cooling Capacity (kcal/h)
CC: Cooling Capacity in the Performance Table (kcal/h)
F: Correction Factor Based on the Equivalent Piping Length

Correction Factor for **Heating Capacity** according to Piping Length

The heating capacity should be corrected according to the following formula:

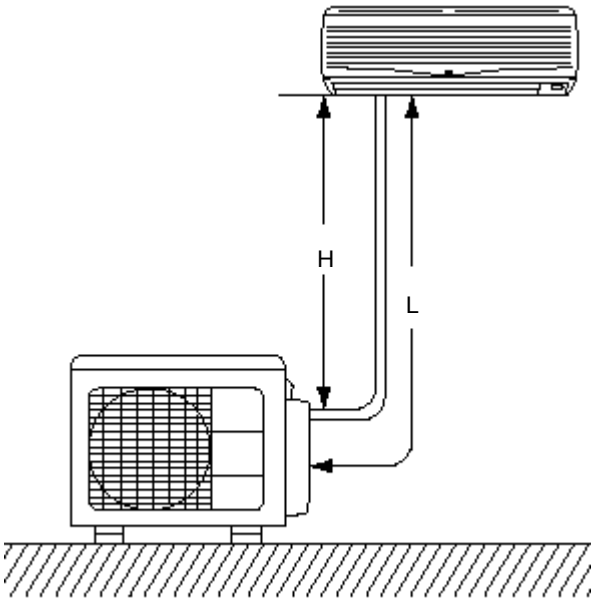

HCA= HC x F

HCA: Actual Corrected Heating Capacity (kcal/h)
HC: Heating Capacity in the Performance Table (kcal/h)
F: Correction Factor Based on the Equivalent Piping Length

The correction factors are shown in the following figure.

Equivalent Piping Length for:

- One 90º Elbow is 0.5m.
- One 180º Curve is 1.5m.

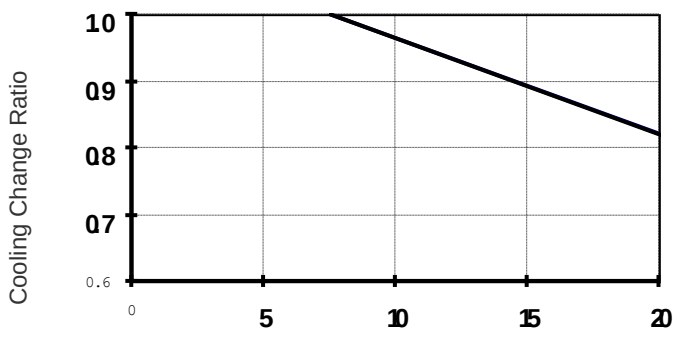

H: Vertical Distance Between Indoor Unit and Outdoor Units in Meters

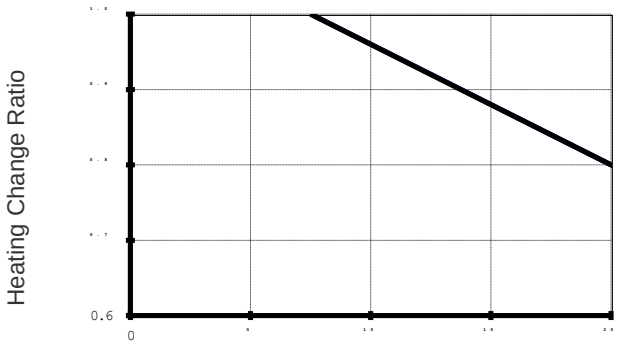

L: Actual One-Way Piping Length Between Indoor Unit and Outdoor Unit in Meters

EL: Equivalent Total Distance Between Indoor Unit and Outdoor Unit in Meters
(Equivalent One-Way Piping Length)

4.5. CORRECTION FACTORS ACCORDING TO DEFROSTING OPERATION

The heating capacity in the preceding paragraph, excludes the condition of the frost or the defrosting operation period. In consideration of the frost or the defrosting operation, the heating capacity is corrected by the equation below.

Corrected heating capacity = Defrost Correction factor x unit capacity

OUTDOOR TEMPERATURE (°CDB)	-15	-10	-5	0	7	10	15
Correction factor (humidity rate85% RH)	0.95	0.95	0.91	0.81	1.0	1.0	1.0

Correction Factor

NOTE:
The correction factor is not valid for special conditions such as snowfall or operation in a transitional period.

*Two units must be connected to the outdoor unit to avoid water condensation and result in water splash.
*One-unit values are for one unit operation with two indoor connected.
*Total nominal cooling capacity should not be more than 8.8kW.

4.6.5. **RAM-68NP3A**

Whichever indoor units are installed, cooling and heating capacity depends on how many and which indoor units are operating at the same time.

*Two units must be connected to the outdoor unit to avoid water condensation and result in water splash.
*One-unit values are for one unit operation with two indoor connected.
*Total nominal cooling capacity should not be more than 8.8kW

4.6.6. **RAM-70NP4A**

Whichever indoor units are installed, cooling and heating capacity depends on how many and which indoor units are operating at the same time.

*Two or three indoor units can be installed with one outdoor unit.
*One-unit values are for one unit operation with two indoor connected.
*Total nominal cooling capacity should not be more than 11.0kW.

4.6.7. **RAM-90NP5A**

Whichever indoor units are installed, cooling and heating capacity depends on how many and which indoor units are operating at the same time.

*Two, three, four or five indoor units can be installed with one outdoor unit.
*One-unit values are for one unit operation with two indoor connected.
*Total nominal cooling capacity should not be more than 15.5kW.

4.6.8. **RAM-130NP6A**

Whichever indoor units are installed, cooling and heating capacity depends on how many and which indoor units are operating at the same time.

*At least four indoor units should be connected
*One-unit values are for one unit operation with four indoors connected.
*Two-unit values are for two units operation with four indoors connected.
*Three-unit values are for three units operation with four indoors connected.
*Four-unit values are for four units operation with four indoors connected.
*Five-unit values are for five units operation with five indoors connected.
*Total nominal cooling capacity should not be more than 17.6kW.

5 WORKING RANGE

CONTENTS

5 WORKING RANGE 5-1
5.1. Power Supply 5-2
5.2. Working Range 5-2
5.2.1. MONO SPLIT - PREMIUM 5-2
5.2.2. MULTIZONE/MONOZONE/MONO SPLIT 5-3

5.1. POWER SUPPLY

Working Voltage	198V ~ 264V
Voltage Imbalance	Within a 3% Deviation from Each Voltage at the Main Terminal of Outdoor Unit
Starting Voltage	Higher than 85% of the Rated Voltage

5.2. WORKING RANGE

5.2.1. MONO SPLIT - PREMIUM

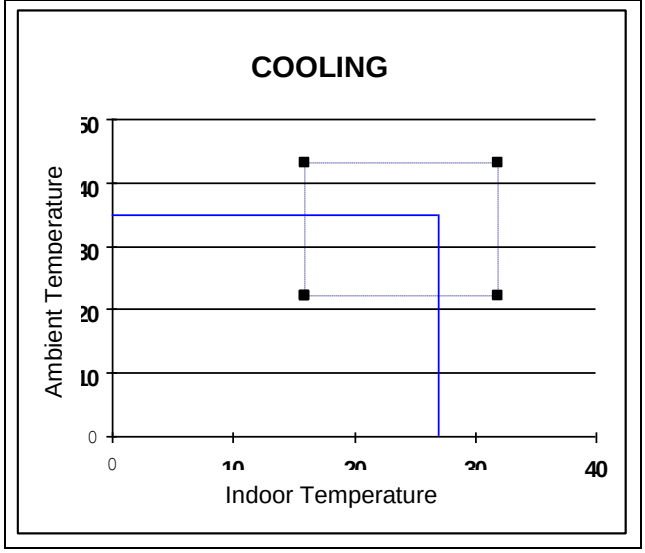

Applicable models:

PREMIUM	
RAC-18WSA	RAC-18WSAN
RAC-25WSA	RAC-25WSAN
RAC-35WSA	RAC-35WSAN

The temperature range is indicated in the following table.

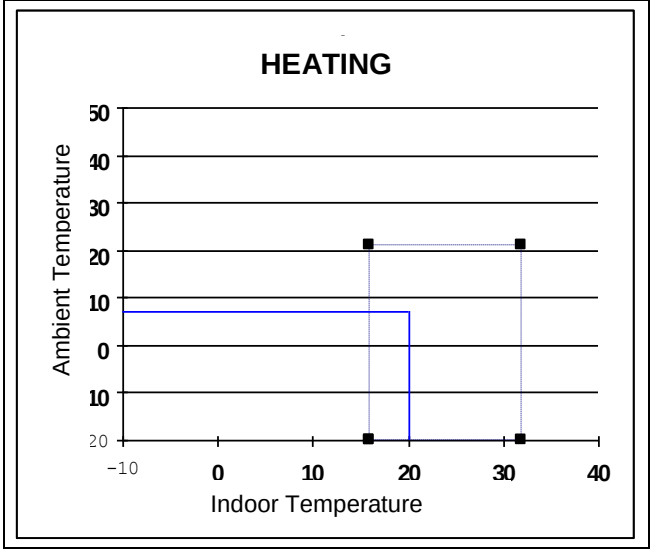

Cooling

working range	min (°C)	max (°C)	rated (°C)
outdoor	22	43	35
indoor	16	32	27

Heating

working range	min (°C)	max (°C)	rated (°C)
outdoor	-20	21	7
indoor	16	32	20

5.2.2. MULTIZONE/MONOZONE/MONO SPLIT

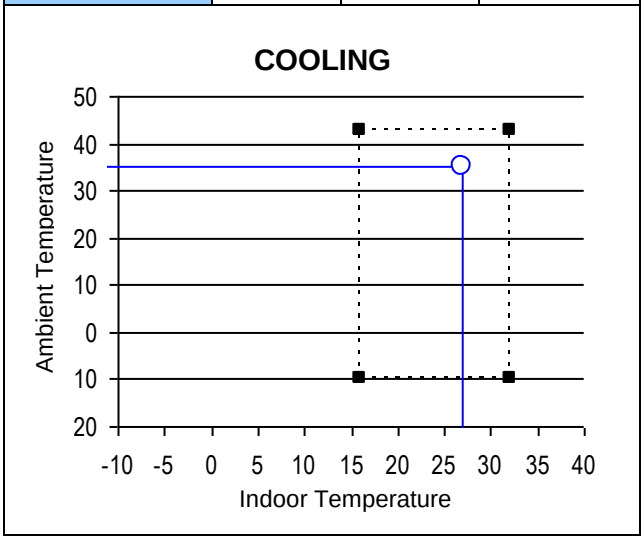

Applicable models:

MULTIZONE	MONOZONE	MONO SPLIT		
RAM-36NP2A	RAC-25NPA	RAC-25WXA	RAC-18WPA	RAC-50DPA
RAM-53NP2A	RAC-35NPA	RAC-35WXA	RAC-25WPA	RAC-60DPA
RAM-53NP3A	RAC-50NPA	RAC-50WXA	RAC-35WPA	RAC-70DPA
RAM-68NP3A		RAC-50WPA	RAC-25FXA	RAC-25FPA
RAM-70NP4A		RAC-60WPA	RAC-35FXA	RAC-35FPA
RAM-90NP5A		RAC-70WPA	RAC-50FXA	RAC-50FPA
RAM-130NP6A				

The temperature range is indicated in the following table.

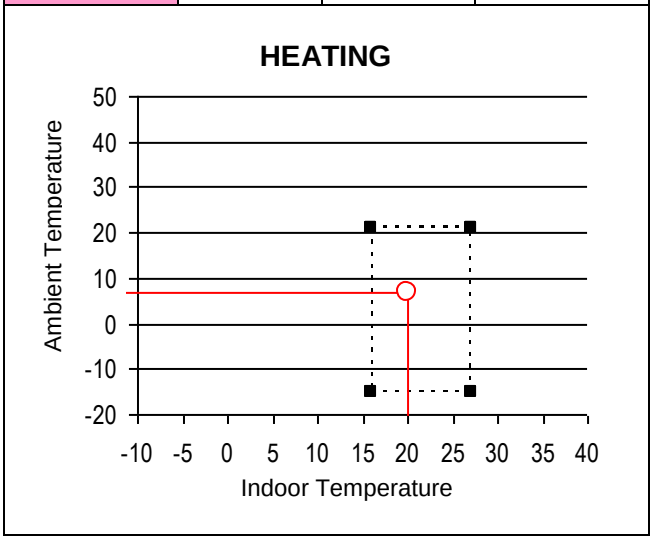

Cooling

working range	min (°C)	max (°C)	rated (°C)
outdoor	-10	43	35
indoor	16	32	27

Heating

working range	min (°C)	max (°C)	rated (°C)
outdoor	-15	21	7
indoor	16	27	20

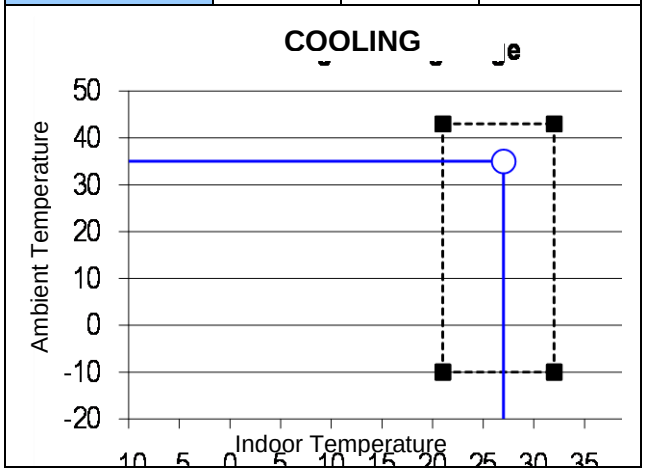

Applicable models:

MONO SPLIT
RAC-18WEA
RAC-25WEA
RAC-35WEA
RAC-50WEA

The temperature range is indicated in the following table.

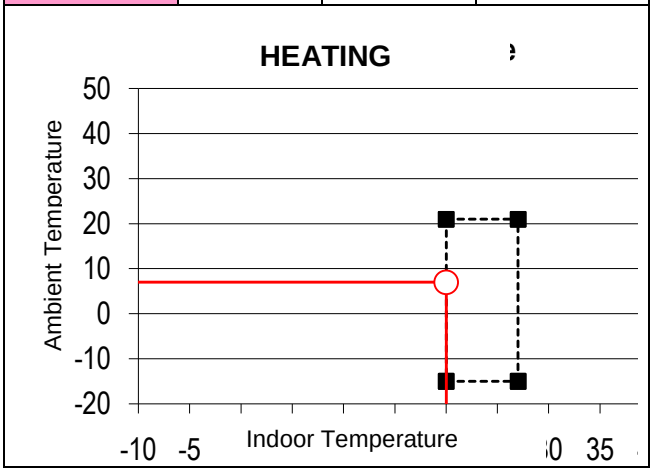

Cooling

working range	min (°C)	max (°C)	rated (°C)
outdoor	-10	43	35
indoor	21	32	27

Heating

working range	min (°C)	max (°C)	rated (°C)
outdoor	-15	21	7
indoor	20	27	20

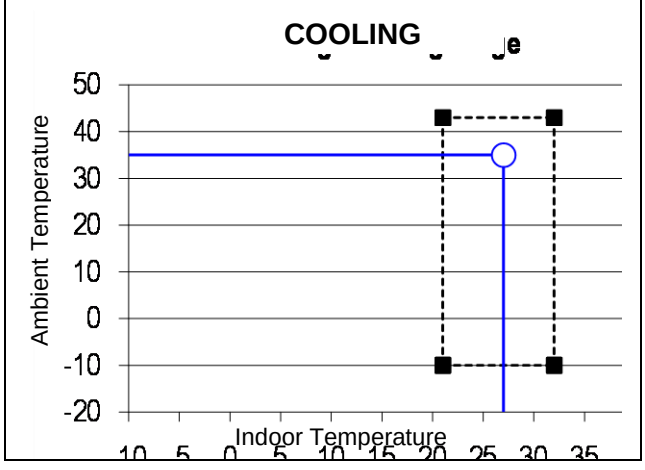

Applicable models:

MONO SPLIT
RAC-18WSPA
RAC-25WSPA
RAC-35WSPA

The temperature range is indicated in the following table.

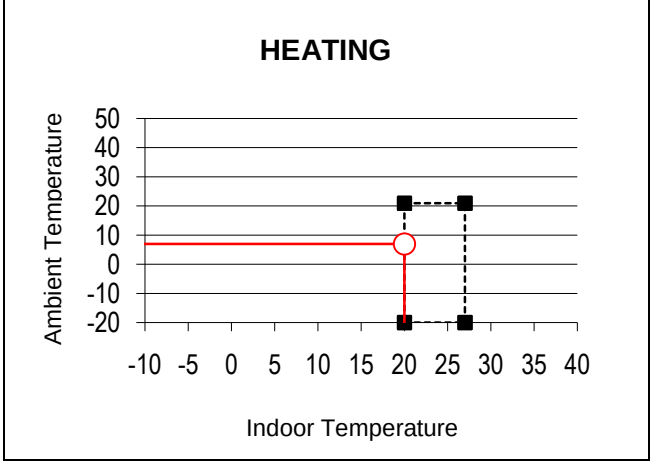

Cooling

working range	min (°C)	max (°C)	rated (°C)
outdoor	-10	43	35

PH: Phase (ϕ)
IPT: Input (W)

NOTE:

1. *The above compressor data is based on 100% capacity combination of indoor units at the rated operating frequency*
2. *This data is based on the same conditions as the nominal heating and cooling capacities.*
3. *The compressor started by an inverter, resulting in extremely low starting current.*

BUTTONS	FUNCTION
MODE	**MODE Selector** Use this button to select the operationg mode. Every time you press this button, the mode will change from (AUTO) → (HEAT) → (DEHUMIDIFY) → (COOL) and → (FAN) cyclically.
FAN	**FAN SPEED Selector Button** This determines the fan speed. Every time you press this button, the airflow rate will change from (AUTO) → (HIGH) → (MED) → (LOW) → (SILENT) (This button allows selection of optimal or preferred fan speed for each operation mode).
	START/STOP button Press this button to start operation. Press it again to stop operation.
ECO	**ECO button** Use this button to set the ECO mode.
	POWERFUL button Use this button to set the POWERFUL mode.
	SILENT button Use this button to set the SILENT mode.
	INFO button 1) Press this button to display temperature for 10 seconds. 2) Press this button to check monthly power consumption. 3) Press this button to recieve the current calendar and clock.
	ECO SLEEP TIMER button Use this button to set the ECO sleep timer.
	AUTO SWING (Vertical) button Controls the angle of the horizontal air deflector.
	AUTO SWING (Horizontal) button Controls the angle of the vertical air deflector.
10°C	**LEAVE HOME button** Prevent the room temperature from falling too much by setting temperature 10°C automatically when no on is at home.
	ONE TOUCH CLEAN button Drying indoor heat exchanger after cooling operation to prevent mildew.
	AIR PURIFIER button Use this button to start air puritying function.
	EXTENDED AIR FLOW button Press this button during operation to start extended airflow operation.
WEEKLY TIMER buttons	
OFF TIMER ON	**ON/OFF TIMER button** The device will turn on (off) and off (on) at the designated time.
TIME	**TIME button** Press the button to set starting time of the program
OK	**OK button** Press the button to save the program. The button shall be pressed everytime after finishing a program setting.
DELETE	**DELETE button** 1) Press the button to delete the selected program. 2) Press the button for about 10 seconds by directing the remote controller towards the indoor unit while Mode A or B display blinks, programs for Mode A or B will be deleted both from the indoor unit and the remote controller after the beep sound from the indoor unit.
Mon-Sun	**DAY button** Select the desired day of the week.
1 – 6	**PROGRAM NO. button** Press this button to select a program number.
CANCEL	**CANCEL** 1) Press the button to cancel the current setting process on the screen. 2) Press the button by directing the remote controller towards the indoor unit, hen weekly timer setting will be canceled from indoor unit after the beep sound from the indoor unit. The program setting remains in the remote controller.
SEND	**SEND button** Press the button for about 3 seconds by directing the remote controller towards the indoor unit after finishing the program setting. Timer lamp on the indoor unit will blink rapidly and after the beep soung from indoor unit, TIMER lamp will light up.
CLOCK	**CLOCK button** Press the button to set calendar and clock.
WEEKLY A/B	**WEEKLY TIMER MODE button** 1) Select Mode A or Mode B. 2 modes can be set and stored as a weekly timer. 2) By pressing the button longer than 3 seconds, program setting screen will appear.

9.1.1.1 AUTOMATIC OPERATION

COOLING/HEATING mode is decided by the room temperature.

A. COOLING/HEATING mode is decided during the **initial start up** of Automatic Operation
Initial start up of Automatic Operation means the following either condition:
- Unit start up in Automatic Operation
- Automatic Operation mode is pressed while the unit is running in manual mode

Start up room temperature	COOL / HEAT
>= Remote controller setting temperature	Unit runs in COOLING mode
< Remote controller setting temperature	Unit runs in HEATING mode

B. COOLING/HEATING mode is decided **in intervals after the initial start up** of Automatic Operation (also known as Auto Changeover function)
**Auto changeover function is not applicable to other indoor models when connected to Multizone outdoor unit.*

(RAI-RPA, RAD-RPA, RAD-PPA, RAF-PXA, RAK-50PPA, RAK-60PPA, RAK-70PPA, RAK-50PXA)

Intervals	Duration
1st interval	10 minutes
2nd interval	15 minutes
Subsequent interval	Every 55 minutes

(RAK-PSPA, RAK-18PPA, RAK-25PPA, RAK-35PPA, RAK-25PXA, RAK-35PXA)

Intervals	Duration
1st interval	5 minutes
2nd interval	15 minutes
Subsequent interval	Every 55 minutes

(RAF-RPA)

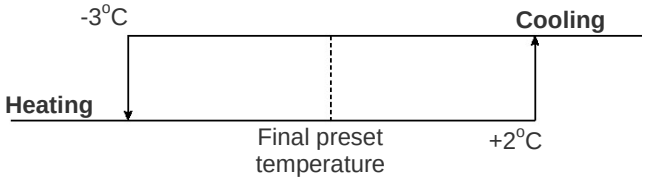

Intervals	Duration
1st interval	30 minutes
2nd interval	50 minutes
Subsequent interval	Every 55 minutes

COOLING/HEATING mode is determined by setting the hysteresis on the final preset temperature.

(RAI-RPA, RAD-RPA, RAD-PPA, RAF-PXA, RAK-50PPA, RAK-60PPA, RAK-70PPA, RAK-50PXA)
Final preset temperature = Remote Controller setting temperature + Σ (sum of all types shift values)
(e.g. temperature shift value, Powerful shift value, Eco shift value, Eco sleep shift value, etc)

Current operation mode	Current room temperature	Next operation mode
COOLING	<= [Final preset temperature - 3 °C]	Change to HEATING
COOLING	> [Final preset temperature - 3 °C]	Continue COOLING

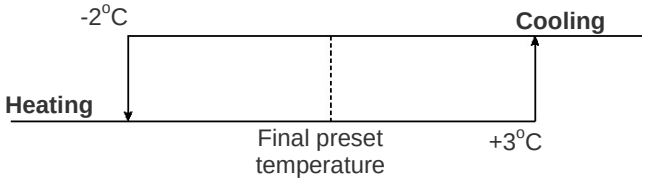

Current operation mode	Current room temperature	Next operation mode
HEATING	>= [Final preset temperature + 2 °C]	Change to COOLING
HEATING	< [Final preset temperature + 2 °C]	Continue HEATING

(RAK-PSPA, RAK-18PPA, RAK-25PPA, RAK-35PPA, RAK-25PXA, RAK-35PXA, RAF-RPA)

Current operation mode	Current room temperature	Next operation mode
COOLING	<= [Final preset temperature - 2 °C]	Change to HEATING
COOLING	> [Final preset temperature - 2 °C]	Continue COOLING

Current operation mode	Current room temperature	Next operation mode
HEATING	>= [Final preset temperature + 3 °C]	Change to COOLING
HEATING	< [Final preset temperature + 3 °C]	Continue HEATING

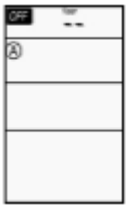

9.1.1.2 SHIFT VALUE

1. Press and hold ⏻ (START/STOP) button and ⏲TIMER ON (ON) button.
2. Press RESET [RESET] button on the same time. Release RESET [RESET] button only, then release ⏻ (START/STOP) and ⏲TIMER ON (ON) button once Screen 1 appears.

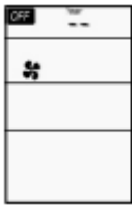

Screen 1

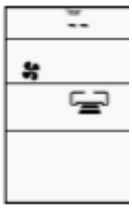

Screen 2

3. Press the MODE (MODE) button to display fan mode (Screen 3).

Screen 3

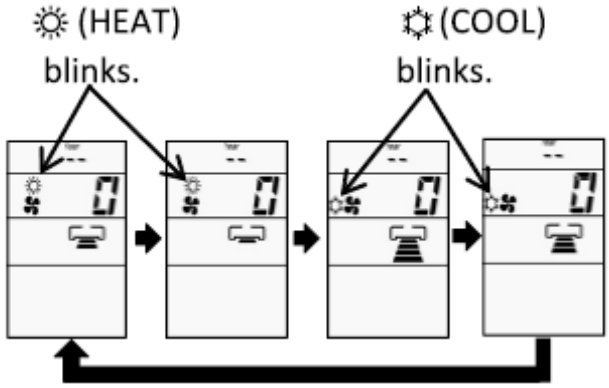

4. Press ⏻(START/STOP) and Screen 4 appear.

Screen 4

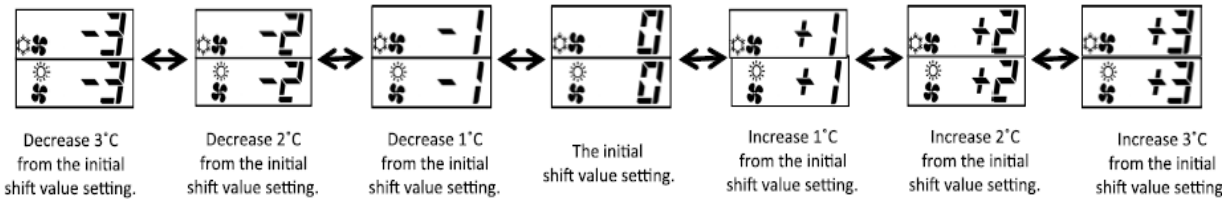

5. Select FAN (FAN SPEED) button to choose Heating Shift or Cooling Shift Mode (Screen 5).

By setting fan speed to HIGH or MED , it will go to Cooling Shift mode.
By setting fan speed to LOW or SILENT, it will go to Heating Shift mode.

Screen 5

6. Press the Temperature button (or) to adjust the shift value.

NOTE:
1. There are total of 7 shift values ranging from -3 to 3.
2. The displayed shift value, (HEAT) and (COOL) symbol on the remote controller display will be disappear after 10 seconds
3. The changed shift value will remain unchanged after turned off the power.
4. If “0” is displayed on the remote controller display, it indicates the shift value is now at the initial setting.

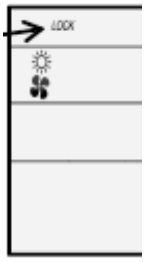

9.1.1.3 OPERATION LOCK

1. HEATING MODE
   a) Press and hold ECO(ECO) and POWERFUL (POWERFUL) buttons, press RESET(RESET) button on the same time. Release RESET(RESET) button only when Screen 1 appear, then release ECO (ECO) button and POWERFUL (POWERFUL) button.

Screen 1

   b) Wait until only Screen 2 appear.

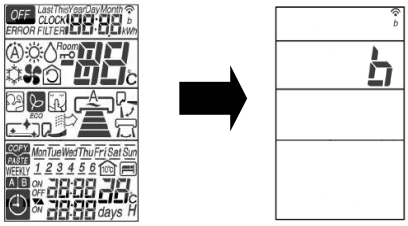

Screen 2

   c) The heating mode operation is locked.
   d) To unlock HEATING mode, repeat step (a). After all operations mode symbols displayed for 10 seconds, the operation mode symbol before cancellation will be display. The heating mode operation is unlocked.

2. COOLING AND DEHUMIDIFYING MODE
   a) Press and hold ECO(ECO) and SILENT (SILENT) buttons for at least 5 seconds when the remote controller is OFF.
   b) Wait until only and displayed on the screen. The cooling and dehumidifying modes operation is locked.
   c) To unlock HEATING mode, repeat step (a). After all operations mode symbols displayed for 10 seconds, the operation mode symbol before cancellation will be display. The cooling and dehumidifying mode operation is unlocked.

9.1.1.4 SETTING THE PREVENTION OF MUTUAL INTERFERENCE

1. Please ensure the other indoor unit is OFF.
2. Press 1~6 (PROGRAM NO.) button, TIMER ON (ON TIMER) button and RESET (RESET) button simultaneously. The remote controller will display Screen 1 and followed by Screen 2. The indoor unit beeps to indicate that it has just received the signal from remote controller.

Screen 1 Screen 2

NOTE:

1. If indoor unit still not receive the correct signal from the correct remote controller, setting shall be made again. By setting again for the 2nd time, the signal address will change from B to A, then repeat again for the 3rd time.
2. As for *RAK-18PPA, RAK-25PPA, RAK-35PPA, RAF-50RPA,* please set the pin No. 6 of the DIP switch at the indoor unit to ON position when selecting channel B for ID communication. *(Please refer to Chapter 1.3.2 for more information)*

9.1.1.5 ERROR CODE INFORMATION

1. In case failure occurs to the air conditioner, by pressing INFO (INFO) button, an error code will be displayed.
2. Direct the remote controller towards the receiver of indoor unit (within 2 meters in from of indoor unit) and press INFO (INFO) button.
3. Wait for 2 seconds for signal transmission and the error code will be displayed.

	**ON TIMER button** Select the turn ON time.
	**OFF TIMER button** Select the turn OFF time.
	**ONE TOUCH CLEAN button** Drying indoor heat exchanger after cooling operation to prevent mildew.
	**FILTER CLEAN button** Start filter cleaning operation while the air conditioner .
	**AUTO button** Press this button to start automatic operation/
	**COMFORT AIRFLOW button** Press this button to start comfort airflow operation.
	
	**IONIZED MIST button** Press this button to start ionized mist operation.
	**ON/OFF TIMER button** The device will turn on (off) and off (on) at the designated time.
	**TIME button** Press the button to set starting time of the program
CANCEL	**CANCEL** 1) Press the button to cancel the current setting process on the screen. 2) Press the button by directing the remote controller towards the indoor unit, hen weekly timer setting will be canceled from indoor unit after the beep sound from the indoor unit. The program setting remains in the remote controller.
SEND	**SEND button** Press the button for about 3 seconds by directing the remote controller towards the indoor unit after finishing the program setting. Timer lamp on the indoor unit will blink rapidly and after the beep soung from indoor unit, TIMER lamp will light up.
	**CLOCK button** Press the button to set calendar and clock.

9.1.2.1 AUTOMATIC OPERATION

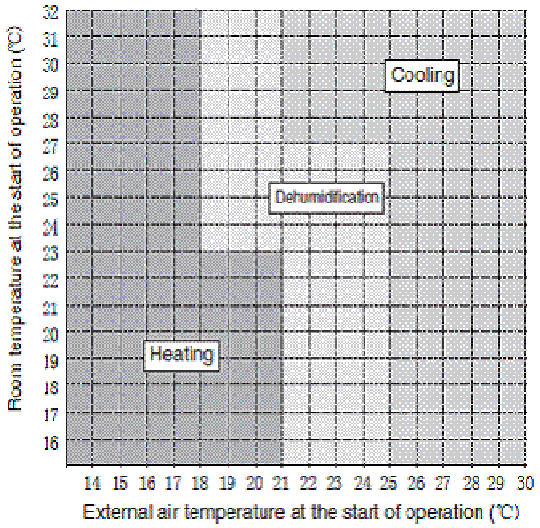

COOLING/HEATING/DEHUMIDIFICATION mode is decided by the room temperature and external air temperature.

A. COOLING/HEATING/ DEHUMIDIFICATION mode is decided during the **initial start up** of Automatic Operation
Initial start up of Automatic Operation means the following either condition:

- Unit start up in Automatic Operation
- Automatic Operation mode is pressed while the unit is running in manual mode

Mode	Room Temperature		External Air Temperature	*Temperature on remote controller will automatically set at
Unit runs in COOLING mode	Room temperature > 27˚C	AND	21˚C <= External air temperature	27˚C (Fan speed mode : AUTO, LOW, SILENT)
	OR			
	Room temperature <=27˚C	AND	External air temperature >=25˚C	
Unit runs in DEHUMIDIFICATION mode	Room temperature > 27˚C		18˚C <= External air temperature <=21˚C	Room temperature at the start of the operation (Fan speed mode: AUTO, LOW, SILENT)
	OR			
	23˚C< Room temperature <=27˚C		25˚C <= External air temperature <=18˚C	
	OR			
	Room temperature <=23˚C	AND	21˚C <= External air temperature <=25˚C	
Unit runs in HEATING mode	Room temperature > 23˚C	AND	External air temperature <=18˚C	23˚C (Fan speed mode: AUTO, LOW, MEDIUM)
	OR			
	Room temperature <=23˚C	AND	External air temperature <=21˚C	

NOTE: *Please refer item C for the information on adjusting room temperature.

B. COOLING/HEATING/ DEHUMIDIFICATION mode is decided **in intervals after the initial start up** of Automatic Operation (also known as Auto Changeover function).

Intervals	Duration
Every Interval	60 minutes

C. ADJUST THE ROOM TEMPERATURE by pressing the (ROOM TEMPERATURE) button.

- Every time the button is pressed, a short beep sound is emitted and the temperature will change by 1˚C.
- +1 is displayed if the temperature is set higher than the automatically set room temperature by 1˚C.
- -1 is displayed if the temperature is set lower than the automatically set room temperature by 1˚C. The adjustable temperature range is not higher or lower that 3˚C of the automatically set room temperature.
- Humidity setting cannot be adjusted.

.

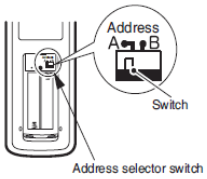

9.1.2.2 OPERATION LOCK

1. HEATING MODE
   a) Press RESET [RESET] button
   b) Press and hold OFF (OFF) and (HEATING) buttons for at least 5 seconds when the remote controller is OFF.
   c) Wait until only and displayed on the screen. The heating mode operation is locked.
   d) To unlock HEATING mode, repeat step (a). The heating mode operation is unlocked.

2 COOLING AND DEHUMIDIFYING MODE
   a) Press RESET [RESET] button
   b) Press and hold OFF (OFF) and (COOLING) buttons for at least 5 seconds when the remote controller is OFF.
   c) Wait until only and displayed on the screen. The cooling and dehumidifying modes operation is locked.
   d) To unlock COOLING mode, repeat step (a). The cooling and dehumidifying mode operation is unlocked.

9.1.2.3 SETTING THE PREVENTION OF MUTUAL INTERFERENCE

1. Please ensure the other indoor unit is OFF.
2. Press RESET (RESET) button on the remote controller.
3. Point the remote controller transmitter/receiver at the indoor unit and move the switch of the Address Selector Switch to B. (Factory setting is set to “A”. The Address Selector Switch is on the outside the remote controller battery cover as per Screen 1)

Screen 1

4. The channel is set when the unit beeps.

Note:
After changing the address, please confirm the unit’s operation with the remote controller. If the unit does not operate, return the switch to “A” and set the switch again.

9.1.3. RAR-5F1

RAR-5F1

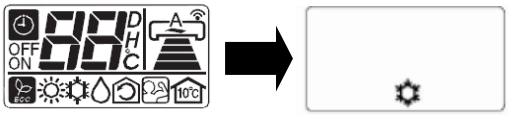

RAK-18PEA RAK-25PEA RAK-35PEA RAK-50PEA

BUTTONS	FUNCTION
	MODE Selector Use this button to select the operationg mode. Every time you press this button, the mode will change for (HEATING), (DEHUMIDIFYING), (COOLING) cyclically.
FAN	**FAN SPEED Selector Button** This determines the fan speed. Every time you press this button, the airflow rate will change from (AUTO) → (HIGH) → (MED) → (LOW) → (SILENT) (This button allows selection of optimal or preferred fan speed for each operation mode).
OFF	**STOP button** Press this button to stop operation.
	ECO button Use this button to set the ECO mode.
	POWERFUL button Use this button to set the POWERFUL mode.
	TEMPERATURE button Value will change quicker when keep pressing.
	AUTO SWING (Vertical) button Controls the angle of the horizontal air deflector.
ON	**ON TIMER button** Select the turn ON time.
OFF	**OFF TIMER button** Select the turn OFF time.

For more information, please refer to the operation manual.

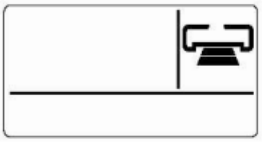

9.1.3.1 SHIFT VALUE

1. Press and hold (OFF) button and (ON) button.
2. Press [RESET] button on the same time. Release [RESET] button only, then release (OFF) and (ON) button once Screen 1 appears.

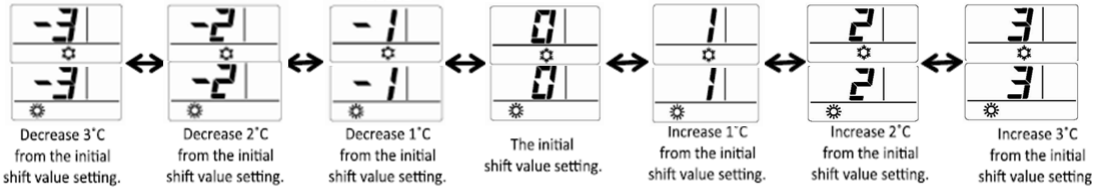

Screen 1 Screen 2

3. Press the (DEHUMIDIFYING) button to display (FAN SPEED) as in Screen 3.

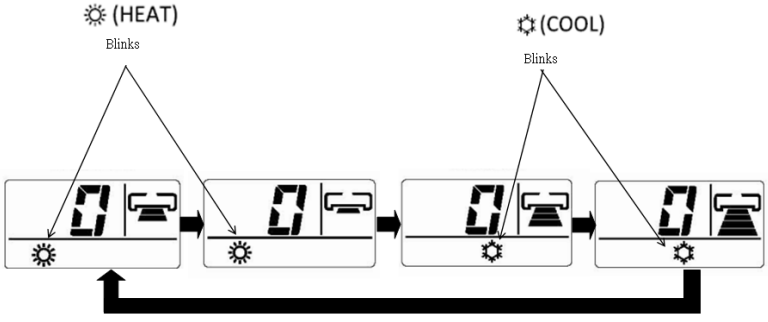

Screen 3

4. Press the Temperature button (or) to change the shift value.
   (The shift value is changed with a beep.)

5. Select FAN(FAN SPEED) button to choose Heating Shift or Cooling Shift Mode (Screen 4).

   By setting fan speed to HIGH or MED , it will go to Cooling Shift mode.
   By setting fan speed to LOW or SILENT, it will go to Heating Shift mode.

Screen 4

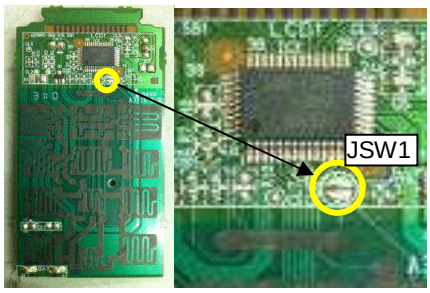

NOTE:

1. There are total of 7 shift values ranging from -3 to 3.
2. The displayed shift value, (HEAT) and (COOL) symbol on the remote controller display will be disappear after 10 seconds
3. The changed shift value will remain unchanged after turned off the power.
4. If “0” is displayed on the remote controller display, it indicates the shift value is now at the initial setting.

9.1.3.2 SETTING THE PREVENTION OF MUTUAL INTERFERENCE

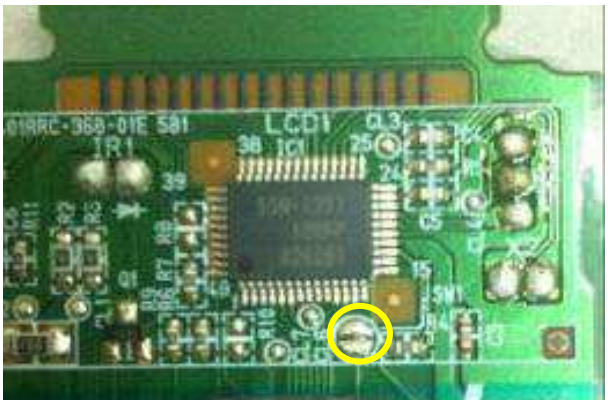

d) Please ensure that the other indoor unit is OFF and the dip switch pin NO.6 at the indoor unit is ON to set the indoor unit ID communication channel to channel B. *(Please refer to Chapter 1.3.2 for more information regarding the dip switch)*

e) Open the cover/case of the remote controller and remove the PCB board as in Screen 1.

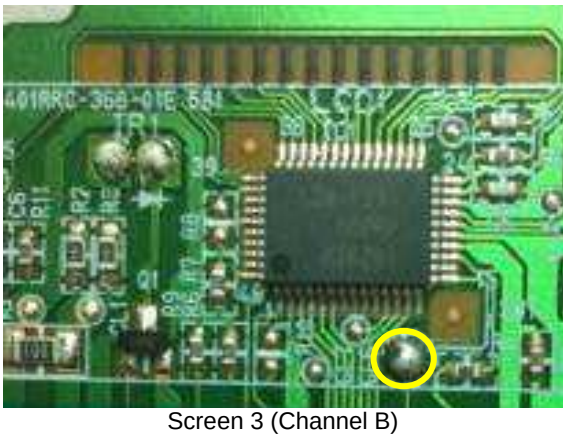

Screen 1

f) Solder to short soldering point JSW1 on the PWB board's surface as in Screen 2(before) to become Screen 3(after).

Screen 2 (Channel A)

Screen 3 (Channel B)

g) Assemble back the remote controller and reinstall it.

9.2 WIRED REMOTE CONTROL (OPTIONAL)

9.2.1. REMOTE CONTROLLER TYPE

This controls the operation function and timer setting of the room air conditioner.

RAR-5G1 (SPX-RCDA)	RAR-5G2 (SPX-RCDB)		
			
RAD-18RPA RAD-25RPA RAD-35RPA RAD-50RPA RAD-50PPA RAD-60PPA RAD-70PPA	RAK-18QPA RAK-25QPA RAK-35QPA RAK-50QPA RAK-18PPA RAK-25PPA RAK-35PPA RAK-50PPA RAK-60PPA RAK-70PPA RAK-18PEA RAK-25PEA RAK-35PEA RAK-50PEA	RAK-18PSPA RAK-25PSPA RAK-35PSPA RAK-18QXA RAK-25QXA RAK-35QXA RAK-50QXA RAK-25PXA RAK-35PXA RAK-50PXA	RAF-25RPA RAF-35RPA RAF-50RPA RAF-25PXA RAF-35PXA RAF-50PXA RAF-25QXA RAF-35QXA RAF-50QXA RAI-25RPA RAI-35RPA RAI-50RPA

BUTTONS	FUNCTION
	MODE Selector Use this button to select the operationg mode. Every time you press this button, the mode will change from (AUTO) → (HEAT) → (DEHUMIDIFY) → (COOL) and → (FAN) cyclically.
FAN	**FAN SPEED Selector Button** This determines the fan speed. Every time you press this button, the airflow rate will change from (AUTO) → (HIGH) → (MED) → (LOW) → (SILENT) (This button allows selection of optimal or preferred fan speed for each operation mode).
	ON/OFF button Press this button to start operation. Press it again to stop operation.
	SLEEP button Use this button to set the SLEEP timer.
SET	**SET button** Timer setting reservation.
OFF	**OFF button** Select the turn OFF timer.
ON	**ON button** Select the turn ON timer.
CANCEL	**CANCEL button** Cancel timer reservation.
	AUTO SWING (Vertical) button Controls the angle of the horizontal air deflector.
	ROOM TEMPERATURE setting button Value will change quicke when keep pressing.

9.2.2. SHIFT VALUE

1. Press and hold ⏻ (ON/OFF) button and ON (ON TIMER) button at the same time while giving a single press on the RESET button until remote controller now enter 'Shift value change mode'.
2. Press ⏻(ON/OFF) button so that the display indicates FAN (FAN) speed.
3. Select FAN(FAN SPEED) button to choose Heating Shift or Cooling Shift Mode.

   By setting fan speed to HIGH or MED , it will go to Cooling Shift mode.
   By setting fan speed to LOW or SILENT, it will go to Heating Shift mode.

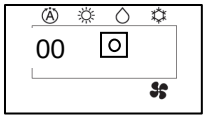

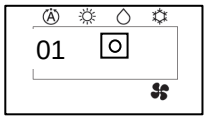

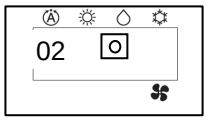

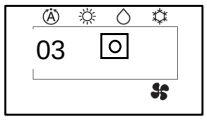

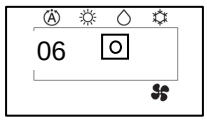

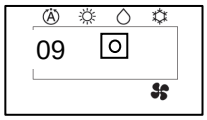

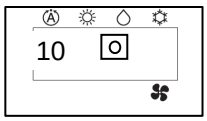

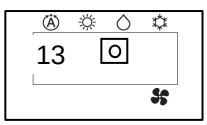

4. Press (ROOM TEMPERATURE) button to change the shift value (-3°C ~ 0 ~ 3°C).

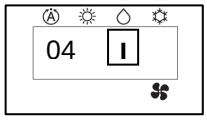

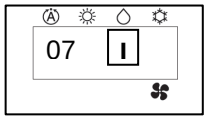

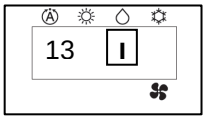

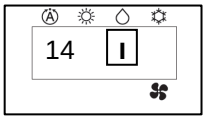

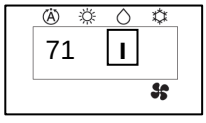

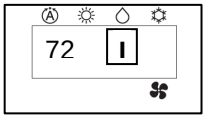

5. Press ⏻ (ON/OFF) button to end 'Shift value setting mode'.

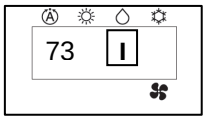

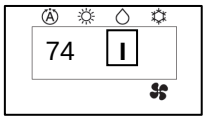

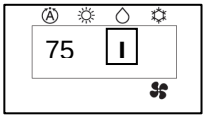

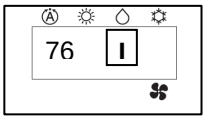

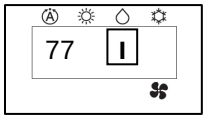

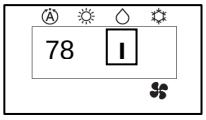

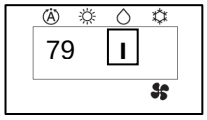

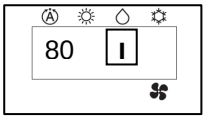

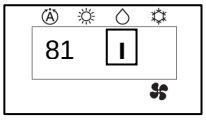

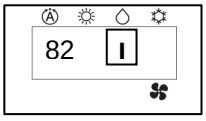

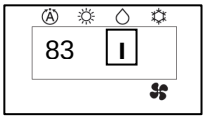

NOTE:
1. There are total of 7 shift values ranging from -3 to 3.
2. The changed shift value will remain unchanged after turned off the power.

9.2.3. ERROR CODE INFORMATION

1. In case failure occurs to the air conditioner, the error code will constantly appear on the wired remote controller display.

	TIMER LAMP BLINKING	LED301 BLINKING	CODE	MEANING
INDOOR	-	-		Normal
	1 time			Refrigerant cycle fault
	2 times	-		Outdoor unit is under forced operation
	3 times	9 times		Communication error between indoor and outdoor units
	6 times	-		Abnormal water level: ceiling/small duct
	9 times	-		Indoor thermistor
	10 times	-		Abnormal rotating numbers
	13 times	-		IC401 data reading error

	TIMER LAMP BLINKING	LD301 BLINKING	CODE	MEANING
OUTDOOR	-	2 times	-	Peak current cut
	-	3 times	-	Compressor abnormal low speed rotation
	4 times	4 times		Compressor switching failure
	-	5 times	-	Overload lower limit cut
	-	6 times	-	OH thermistor temperature rise
	4 times	7 times		Abnormal outdoor thermistor
	-	10 times	-	Abnormal power source
	-	11 times	-	Fan stop for strong wind
	4 times	12 times		Fan motor fault
	4 times	13 times		EEPROM reading error
	4 times	14 times		Active converter defective
	4 times	2 times		Overheat thermostat
	4 times	2 times		Defrost thermostat

	TIMER LAMP BLINKING	LD301 BLINKING	CODE	MEANING
OUTDOOR	4 times	3 times		Outdoor temperature thermostat
	4 times	4 times		Narrow pipe thermostat (indoor 1)
	4 times	5 times		Wide pipe thermostat (indoor 1)
	4 times	6 times		Narrow pipe thermostat (indoor 2)
	4 times	7 times		Wide pipe thermostat (indoor 2)
	4 times	8 times		Narrow pipe thermostat (indoor 3)
	4 times	9 times		Wide pipe thermostat (indoor 3)
	4 times	10 times		Narrow pipe thermostat (indoor 4)
	4 times	11 times		Wide pipe thermostat (indoor 4)
	4 times	12 times		Narrow pipe thermostat (indoor 5)
	4 times	13 times		Wide pipe thermostat (indoor 5)

NOTE: Refer to Chapter 14 for more information on troubleshooting.

10 UNITS INSTALLATION

CONTENTS

10 UNITS INSTALLATION 10-1
10.1 INSTALLATION OF INDOOR UNIT 10-2

10.1.6 INSTALLATION OF MIDDLE STATIC PRESSURE DUCT TYPE INDOOR 10-34
10.2 INSTALLATION OF OUTDOOR UNIT 10-41
10.2.1. SINGLE SPLIT AND MULTI TYPE OUTDOOR 10-41
10.3 FINAL STAGE OF INSTALLATION 10-44
10.3.1. INSULATION AND MAINTENANCE OF PIPE CONNECTIONS 10-44
10.3.2. INSTALLATION OF REMOTE CONTROLLER 10-44

10.1 INSTALLATION OF INDOOR UNIT

10.1.1 INSTALLATION OF WALL TYPE INDOOR

Please read the safety precautions carefully before operating the unit. The contents of this section are vital to ensure safety. Please pay special attention to the following signs.

⚠WARNING Incorrect methods of installation may cause death or serious injury

⚠CAUTION Improper installation may result in serious consequences.

⏚ Make sure to connect earth wire

⊘ This sign indicates prohibition

Be sure that the unit operates in proper condition after installation. Explain to customer the proper way of operating the unit as described in the user's guide.

⚠ WARNING

- Please request your sales agent or qualified technician to install your unit. Water leakage, short circuit of fire may occur if you do the installation work yourself.
- Please observe the instructions stated in the installation manual during the process of installation. Improper installation may cause water leakage, electric shock and fire.
- Make sure that the units are mounted at locations which are able to provide full support of the weight of the units. If not, the units may collapse and impose danger.
- Observe the rules and regulations of the electrical installation and the methods described in the installation manual when dealing with the electrical work. Use power cables approved by the authorities of your country.
- Be sure to use the specified wire for connecting the indoor and outdoor units. Please ensure that the connections are tight after the conductors of the wire are inserted into the terminals. Improper insertion and loose contact may cause over-heating and fire.
- Please use the specified piping set for the correct refrigerant gas. Otherwise, this may result in broken copper pipes or faults
- When installing or removing an air conditioner, don not allow air or moisture to remain in the refrigeration cycle. Otherwise, pressure in the refrigeration cycle may become abnormally high may cause a rupture.
- Be sure to ventilate fully in case refrigerant gas leaks while at work. If the refrigerant gas comes into contact with fire, poisonous gas might be discharged.
- After completion of installation work, check to make sure that there is no refrigeration gas leakage. If the refrigerant gas leaks into the room, coming into contact with fire in a fan-driver heater, space heater, etc; poisonous gas may be emitted.
- Unauthorized modifications to the air conditioner may be dangerous. If a breakdown occurs, please contact a qualified air conditioner technical or electrician. Improper repairs may result in water leakage, electric shock and fire.
- Be sure to connect the earth wire from power supply wire to the outdoor unit and between the outdoor and indoor unit. Improper grounding may cause electric shock. ⏚

⚠ CAUTION

- A circuit breaker or fuse must be installed. Without a circuit breaker or fuse, the danger of electric shock exists. A main switch with a contact gap of more than 3.5mm has to be installed in the power supply line to the outdoor unit.
- Do not install the unit near a location where there is a flammable gas. The indoor unit may catch fire if flammable gas leaks around it.
- Be sure to tighten the flare nut to the specified torque using a toque wrench. If the flare nut is tightened excessively, it may crack as time elapses, causing the refrigerant leakage.
- Please ensure smooth flow of water when installing the drain hose.
- Piping shall be suitable supported with a maximum spacing of 1m between supports
- An IEC approved power cord should be used. Power cord type: NYM.

■ **The Choice of Mounting site**

⚠ WARNING

- The unit should be mounted at stable, non-vibratory location which can provide full support to the unit.

⚠ CAUTION

- No nearby heat source and no obstruction near the air outlet is allowed.
- The clearance distances from top right and left are specified in figure below.
- The location must be convenient for water drainage and pipe connection with the Outdoor unit.
- To avoid interference from noise, please place the unit and its remote controller at least 1m from the radio, television and inverter type fluorescent lamp.
- To avoid any error in signal transmission form the remote controller, please put the controller far away from high-frequency machines and high-power wireless systems.
- The installation height of indoor unit must be 2.3m or more.

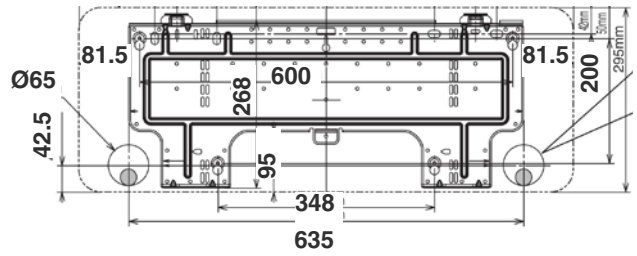

Installation of Hanger, Wall Penetration and Installation of Protection Pipe.

①CAUTION

- The draining of the water container inside the indoor unit can be done from the left. Therefore, the hanger must be fixed horizontally or slightly tilted towards the side of drain hose. Otherwise, condensed water may overflow the water container.

■ Direct Mounting on the Wall

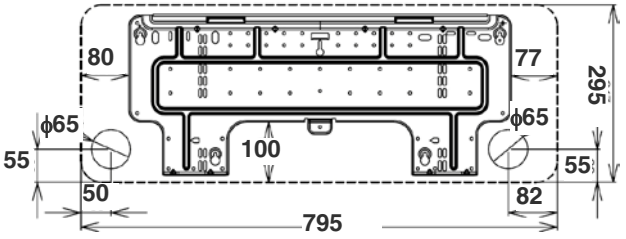

- Please use hidden beams in the wall to hold the hanger

■ Procedures of Installation and Precautions

- Procedures to fix the hanger

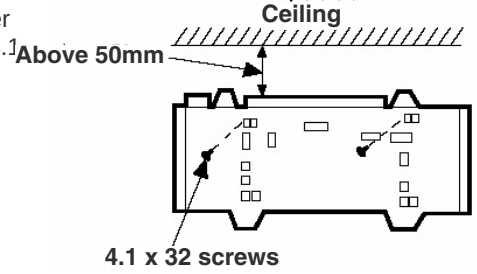

1. Drill holes on the wall

2. Push plug into the holes.

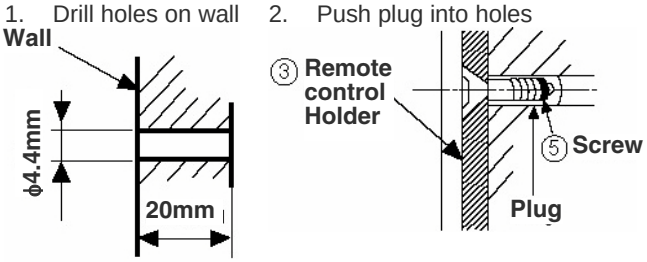

3. Fix the hanger on wall with 4.1 x 32 screws

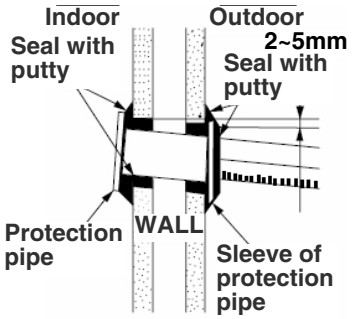

- Procedures to fix the holder of the remote control

1. Drill holes on wall 2. Push plug into holes

■ Wall Penetration and Installation of Protection Pipe

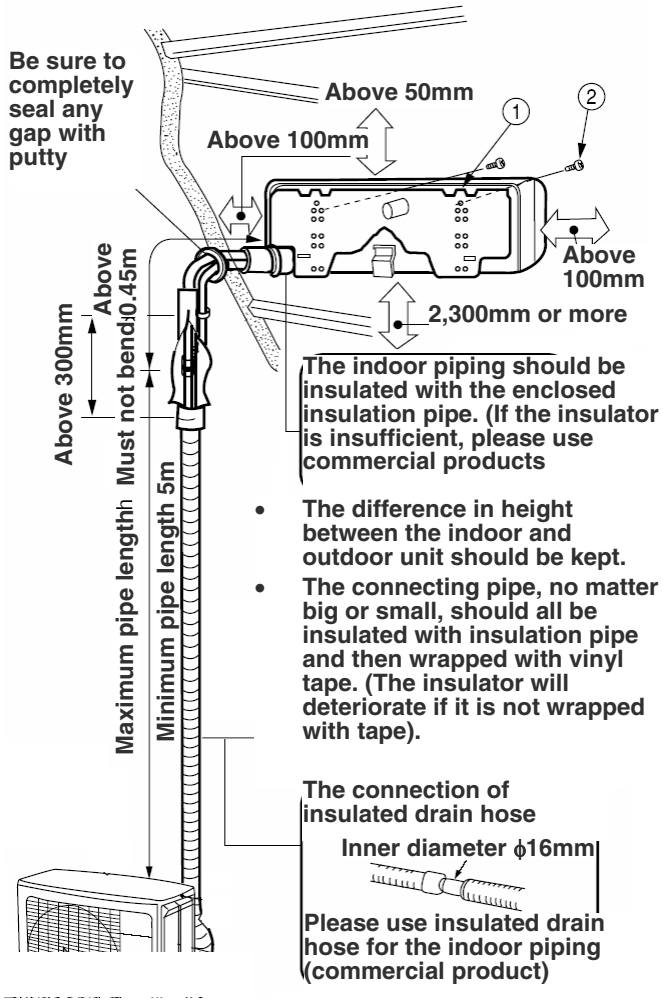

- Drill a 65mm hole on wall which is slightly tilted towards the outdoor side. Drill the wall at a small angle
- Cut the protection pipe according to the wall thickness
- Empty gap in the sleeve of protection pipe should be completely sealed with putty to avoid dripping of rain water into the room.

① WARNING

- Be sure that the wire is not in contact with any metal in the wall. Please use the protection pipe as wire passing through the hollow part of the wall so as to prevent the possibility of damaged by mouse. Unless it seals completely, any air with high humidity flows from outdoor and dew may drop.

■ Vertically Downward Piping

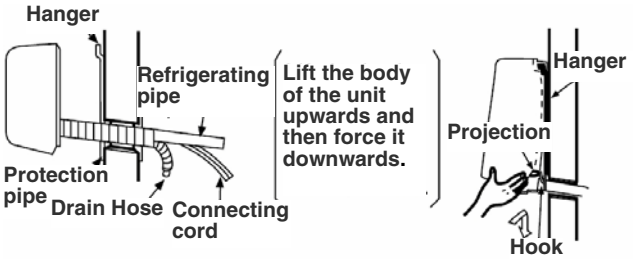

Preparation

- Connect the connecting cord
- Pull out the pipe, connecting cord and drain hose.

Installation

- The upper part of the Indoor unit is hung on the hanger
- The projection at the lower part of the Indoor unit is hooked onto the hanger.

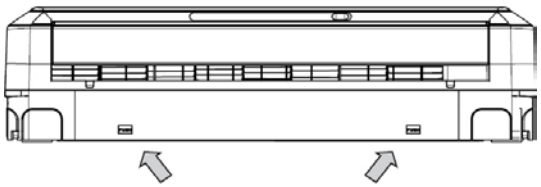

① CAUTION

Please pull the lower part of the indoor unit outwards to check if the unit is hooked onto the hanger. Improper installation may cause vibration and noise.

How to remove indoor unit

- Push up the (PUSH) sections at the bottom of the indoor unit and pull the bottom plate towards you. Then the claws are released from the stationary plate. The (Push) sections are indicated by 2 arrows in figure.

[Push] marks position

■ Horizontal Piping

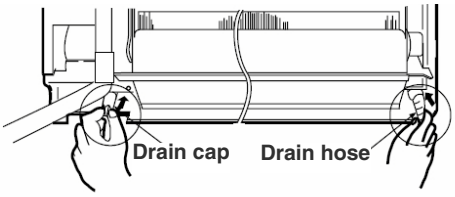

Preparation

Change of Drain Hose and Installation Procedures

- Exchange the location of drain hose and drain cap during horizontal piping as shown in figure below. Be sure to plug in the drain hose until the insulation material folds upon itself.

Please use pliers to pull out the drain cap.

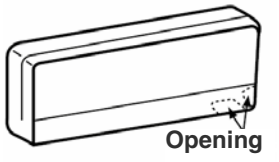

Condensed water may leak out if not inserted

① CAUTION

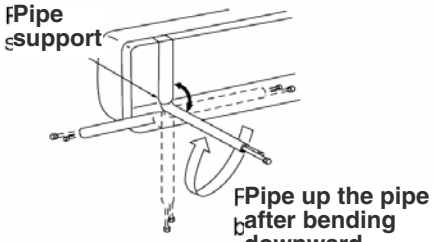

- Condensed water may leak out if not inserted properly.

■ Horizontal & Downward Piping-Making Openings

- During horizontal or downward piping, use a knife to cut openings as shown in figure. Then remove the sharp edges of openings with a file.

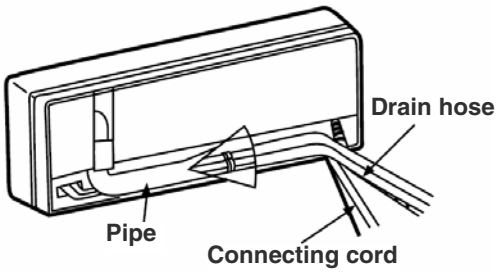

- Turn the piping while holding down the lower

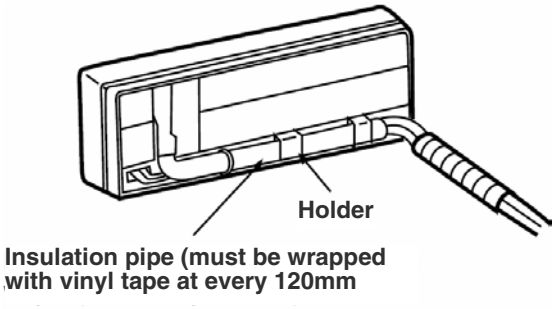

portion of pipe-support

Installation of Refrigerating Pipes after Connection

- The refrigerating pipes should be adjusted to fit into the hole on the wall and then ready for further connection.
- The terminals of 2 connected pipes must be covered with insulator used for terminal connection. Then the pipes are wrapped with insulation.
- Connect the connecting cord after removing electrical cover. (Refer to Chapter13 Electrical Wiring)

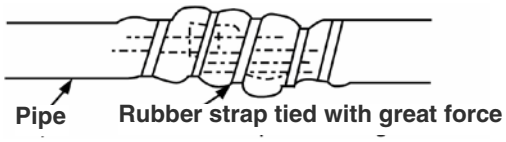

- After adjustment, fit the connecting cord and pipes into the space available under the indoor unit. Use holder to hold them tight
- Holder can be attached at the either of 2 places. Please select the easier position.

① CAUTION

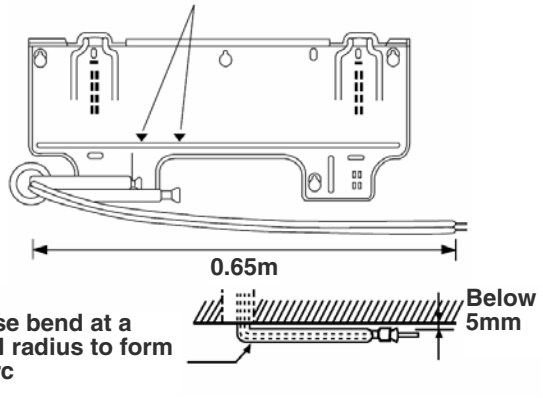

- The rubber strap used for fixing the insulator should not be tied with great force. Otherwise, this will damage the heat insulation and causes water condensation.

■ The Connection of Refrigerating Pipe during the Installation of Indoor unit

Preparation to Install Refrigerating Pipes

- The refrigerating pipes and connecting cord transform and are attached.
- The end of the refrigerating pipes are at locations marked with "▼" symbol

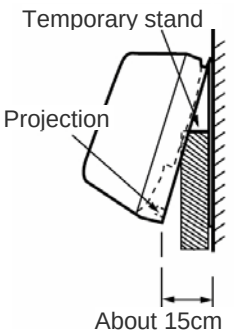

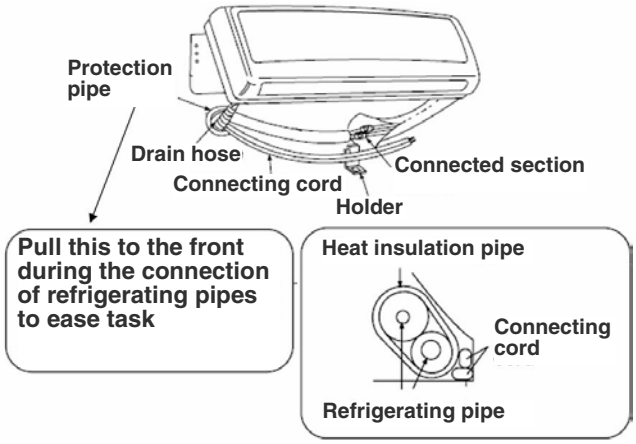

① CAUTION

- Please fix in the plastic core after flaring to avoid plastic chips entering the pipes.

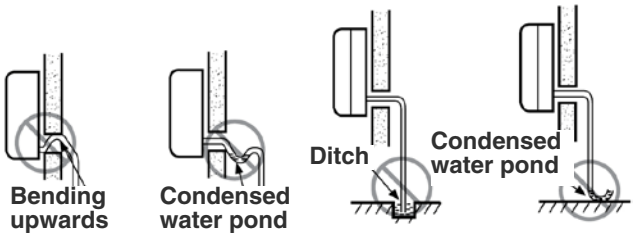

Installation

- Hang the Indoor unit onto the hanger. Use the temporary stand at the back of the Indoor unit to push its lower part 15cm forwards.
- Place the drain hose through the hole on the wall
- Wrap the refrigerating pipes with insulation pipe after connecting refrigerating pipe.
- Connect the connecting cord after removing electrical cover.(Refer to Chapter13 Electrical Wiring)
- After adjustment, the connecting cord and refrigerating pipes are placed into the space available under the Indoor unit.
- The projection of Indoor Unit must hook to the hanger

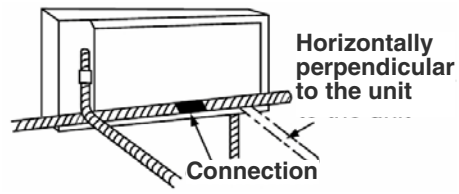

Installation of drain hose

① CAUTION

- Be sure that the drain hose is not loosely connected or bend.
- You are free to choose the side (left or right) for the installation of drain hose. Please ensure the smooth flow of condensed water of the Indoor unit during installation. (Carelessness may result in water leakage.)

Direction of Piping

There are 6 directions allowed, namely,

- horizontally perpendicular to the unit
- vertically down from right
- horizontally out from right
- horizontally out to left
- horizontally out to right
- vertically down from left

⚠ CAUTION

- Don't form the piping downward at the left of the unit.

10.1.2 INSTALLATION OF FLOOR TYPE INDOOR (RAF-QXA, RAF-PXA)

Please read the safety precautions carefully before operating the unit. The contents of this section are vital to ensure safety. Please pay special attention to the following signs.

⚠WARNING Incorrect methods of installation may cause death or serious injury

⚠CAUTION Improper installation may result in serious consequences.

⏚ Make sure to connect earth wire

⊘ This sign indicates prohibition

Be sure that the unit operates in proper condition after installation. Explain to customer the proper way of operating the unit as described in the user's guide.

⚠ WARNING

- Please request your sales agent or qualified technician to install your unit. Water leakage, short circuit of fire may occur if you do the installation work yourself.
- Please observe the instructions stated in the installation manual during the process of installation. Improper installation may cause water leakage, electric shock and fire.
- Make sure that the units are mounted at locations which are able to provide full support of the weight of the units. If not, the units may collapse and impose danger.
- Observe the rules and regulations of the electrical installation and the methods described in the installation manual when dealing with the electrical work. Use power cables approved by the authorities of your country.
- Be sure to use the specified wire for connecting the indoor and outdoor units. Please ensure that the connections are tight after the conductors of the wire are inserted into the terminals. Improper insertion and loose contact may cause over-heating and fire.
- Please use the specified piping set for the correct refrigerant gas. Otherwise, this may result in broken copper pipes or faults
- When installing or removing an air conditioner, don not allow air or moisture to remain in the refrigeration cycle. Otherwise, pressure in the refrigeration cycle may become abnormally high may cause a rupture.
- Be sure to ventilate fully in case refrigerant gas leaks while at work. If the refrigerant gas comes into contact with fire, poisonous gas might be discharged.
- After completion of installation work, check to make sure that there is no refrigeration gas leakage. If the refrigerant gas leaks into the room, coming into contact with fire in a fan-driver heater, space heater, etc; poisonous gas may be emitted.
- Unauthorized modifications to the air conditioner may be dangerous. If a breakdown occurs, please contact a qualified air conditioner technical or electrician. Improper repairs may result in water leakage, electric shock and fire.
- Be sure to connect the earth wire from power supply wire to the outdoor unit and between the outdoor and indoor unit. Improper grounding may cause electric shock. ⏚

① CAUTION

- A circuit breaker or fuse must be installed. Without a circuit breaker or fuse, the danger of electric shock exists. A main switch with a contact gap of more than 3.5mm has to be installed in the power supply line to the outdoor unit.
- Do not install the unit near a location where there is a flammable gas. The indoor unit may catch fire if flammable gas leaks around it.
- Be sure to tighten the flare nut to the specified torque using a torque wrench. If the flare nut is tightened excessively, it may crack as time elapses, causing the refrigerant leakage.
- Please ensure smooth flow of water when installing the drain hose.
- Piping shall be suitable supported with a maximum spacing of 1m between supports
- An IEC approved power cord should be used. Power cord type: NYM.

① WARNING

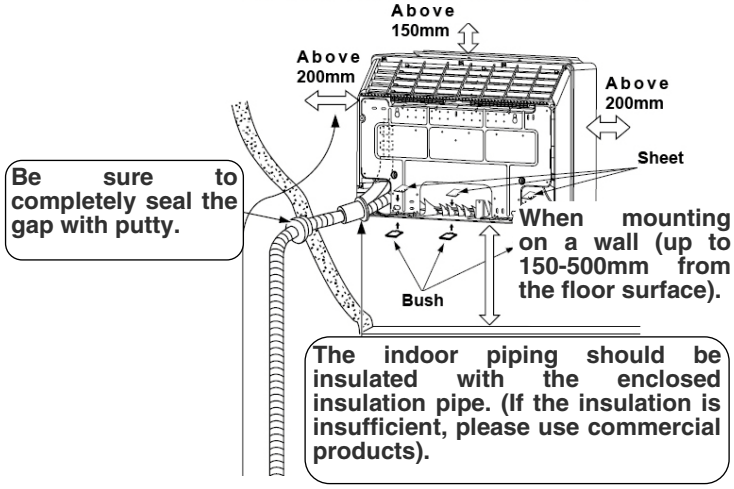

- The unit should be mounted at stable, non-vibratory location which can provide full support to the unit.

① CAUTION

- No nearby heat source and no obstruction near the air outlet is allowed.
- The clearance distances from top right and left are specified in figure below.
- The location must be convenient for water drainage and pipe connection with the Outdoor unit.
- To avoid interference from noise, please place the unit and its remote controller at least 1m from the radio, television and inverter type fluorescent lamp.
- To avoid any error in signal transmission form the remote controller, please put the controller far away from high-frequency machines and high-power wireless systems.

Indoor unit installation

The space indicated by an arrow is to guarantee the performance of the air conditioner. Install the apparatus at the ample space in order to carry out the maintenance and repair works.

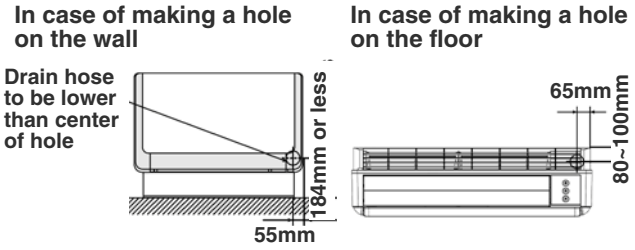

Models: Floor type	Maximum piping length (m)	Minimum piping length (m)	Maximum height (m)
RAF-25PXA	10	5	20
RAF-35PXA	10	5	20
RAF-50PXA	10	5	30

Installation of wall penetration and installation of protection pipe

1. Hole position

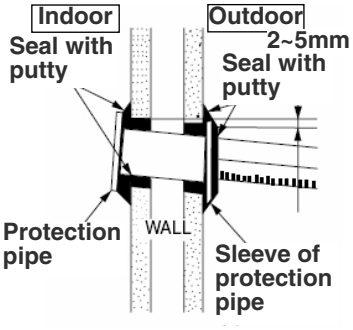

Make a hole on the wall such the position as shown below, in order to keep the flow for condensed water smooth.

Hole position

2. Wall penetration and installation of protection pipe

Drill a Φ65mm hole on wall which is slightly tilted towards the outdoor side. Drill the wall at a small angle.
Cut the protection pipe according to the wall thickness.
Empty gap in the sleeve of protection pipe should be completely sealed with putty to avoid dripping of rain water into the room.

① CAUTION

- Be sure that the wire is not in contact with any metal in the wall. Please use the protection pipe as wire passing through the hollow part of the wall so as to prevent the possibility of damaged by mouse.

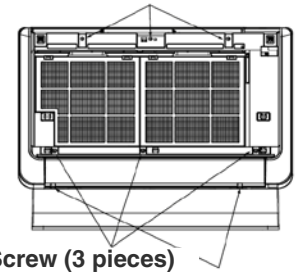

Installation of the indoor unit

1. How to remove the front cover

Please refer to section for details.

Removal and installation of front cover

Screw (3 pieces)

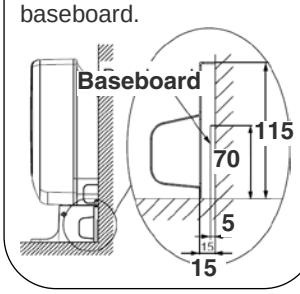

Screw (3 pieces)

Screw (2 pieces)

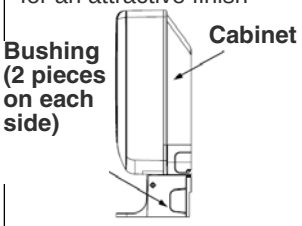

If there is a baseboard

If there is a baseboard 5~15mm in thickness and 115mm or less in height, cut the pipe bushing to conform to the baseboard.

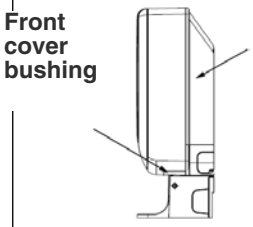

For sideways piping

For right sideways piping, cut the stand's bushing with a plastic cutter or similar tool and use a file for an attractive finish

For floor piping

For floor piping, cut the front cover bushing with a plastic cutter or similar tool and use a file for an attractive finish.

2. Drain pipe

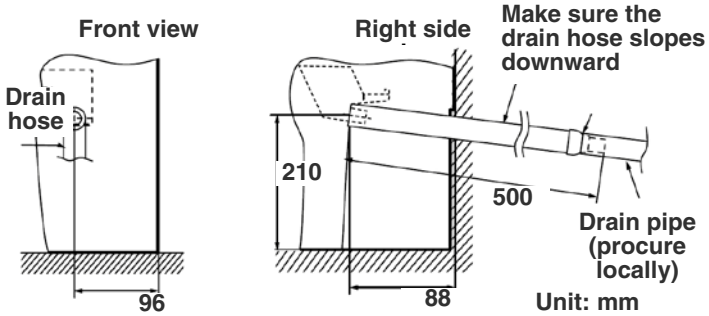

Make sure drain pipe slopes downward so that drain flows smoothly without being trapped in the middle.

The drain hose (connecting port outer diameter: 16mm or 20mm, length: 500mm) is included in the indoor unit.

Prepare a drain pipe as shown in the following figure.

To prevent condensation, the indoor drain pipe should be covered with heat insulation material with a thickness of more than 10mm.

After piping is completed, check to make sure that drain discharges smoothly. Seal the drain pipe tightly with tape to keep dirt out.

3. Connecting the pipe to indoor unit

Draw in the pipes through the hole of the wall or the floor to indoor.

Arrange he pipe shown below. In the case that large pipe and small pipe arrange to make in front and behind.

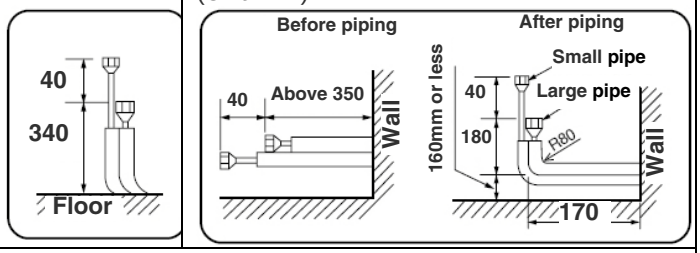

The indoor piping should be insulated with the enclosed insulation pipe.

The pipe should first be cut longer than the length shown below.

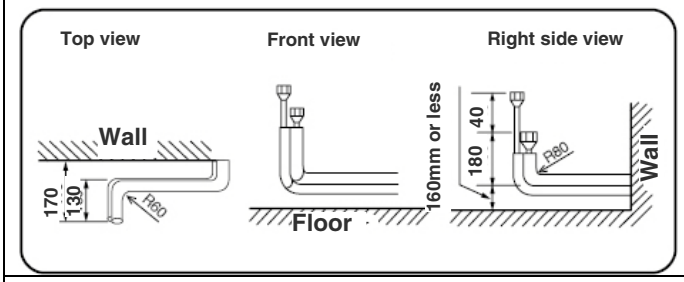

The excess section of the pipe should be cut off during pipe connection.

- In the case of make a hole on the floor	- In the case of make a hole on the wall

(Unit: mm)

- Sideways piping

Remove PIPE SUPPORT.

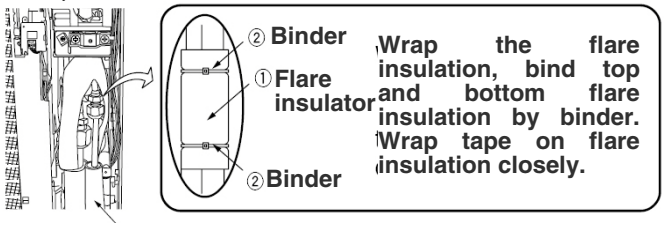

Insert the drain hose into the hole in the wall.

Winding insulation pipe for drain hose and taping 4 or 5 places to fix.

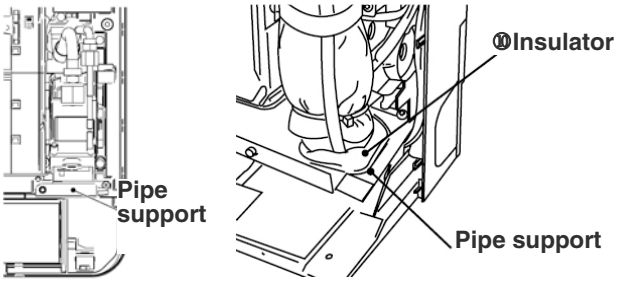

Connect the pipe to the indoor unit.

After completing the piping connection, cover the connector with the insulator.

Connect the cord (follow instructions in the section "Connection of the connecting cord" on the reverse of this sheet).

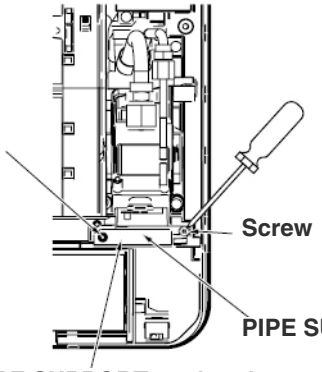

- Since there is some space between PIPE SUPPORT and the pipe, affix the insulator ⑩ to the PIPE SUPPORT. As shown in the figure below, affix the insulator ⑩ to the PIPE SUPPORT to sandwich it.

- After connecting the pipes and connecting cord, be sure to screw PIPE SUPPORT tightly and fix the pipes and connecting cord.

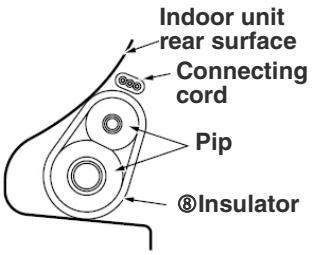

Hook the PIPE SUPPORT tab in the square hole.

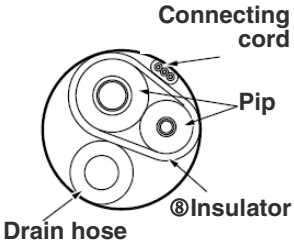

Mount PIPE SUPPORT so that the cylindrical portion of the drain pan passes through its hole and sucure it with screws located at the right back corner.

- Position the easy-to-attach side of PIPE SUPPORT (after aligning it with the pipe) to face the front and secure it with a screw. (Be sure to install PIPE SUPPORT to prevent rodents from entering the indoor unit.)
- To prevent the pipe connector from contacting the front cover, push the connector as fsr as it goes.
- Arrange the connecting cord, pipes and drain hose neatly and store them in the bottom section of the rear surface of the indoor unit.

- Pipe layout of the unit rear surface

- Pipe/drain hose layout when passing through the file in a wall

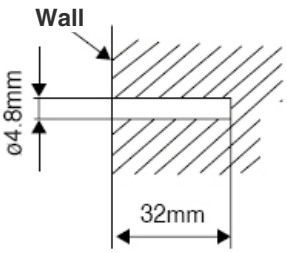

ⓘ CAUTION

- When mounting the flare insulator ①, make sure there is a space between the insulator and left of resin part. Otherwise, may cause water dripping.

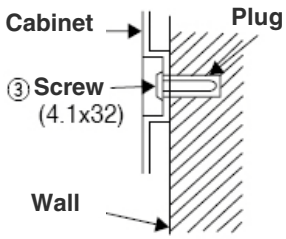

Fixing the indoor unit

1. Floor installation

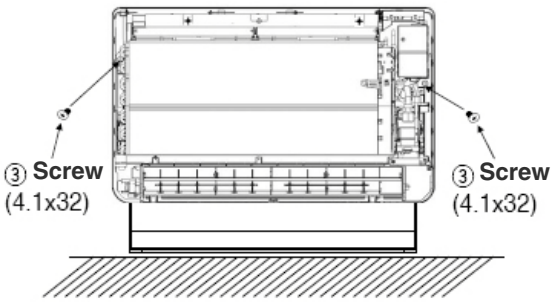

a. Drill holes on wall (As shown below)

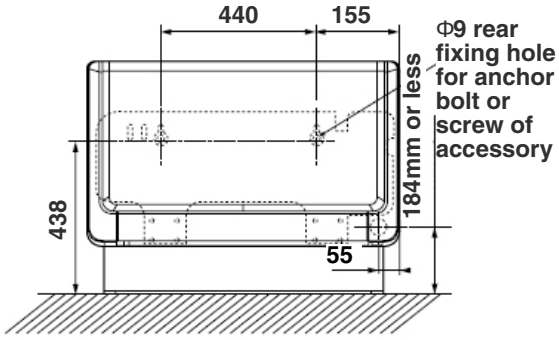

b. Push plug into the holes (As shown below)

Fixing on the wall

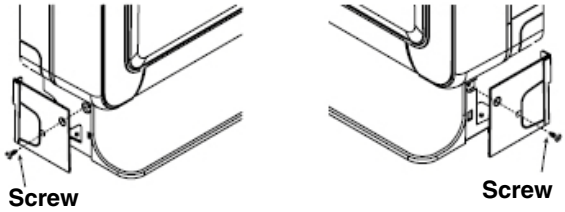

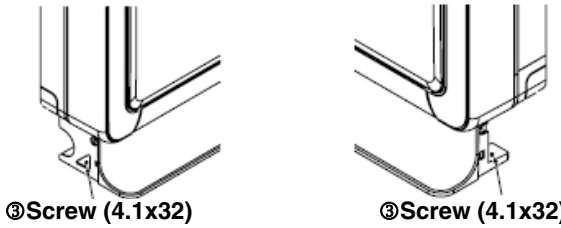

Fixing on the hanger

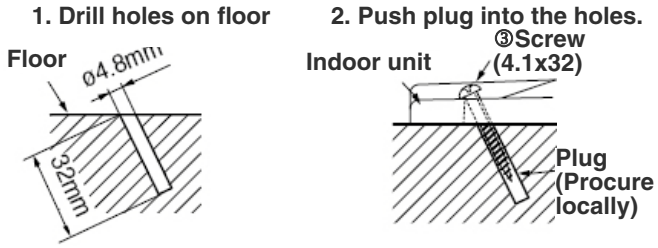

Fixing the base of indoor unit

- **Fix the base of indoor unit on the floor with 4.1x3.2mm screws (right and left).**
- **When fixing the indoor unit above the ground, be sure to fix an L-angle at the bottom to support it.**

(The plug can be secured diagonally with a screw as shown above.)

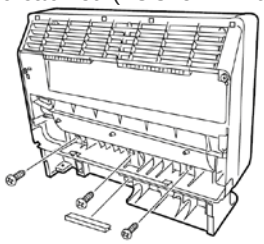

① WARNING

- Be sure to attach screw ③ to prevent the indoor unit from overturn.

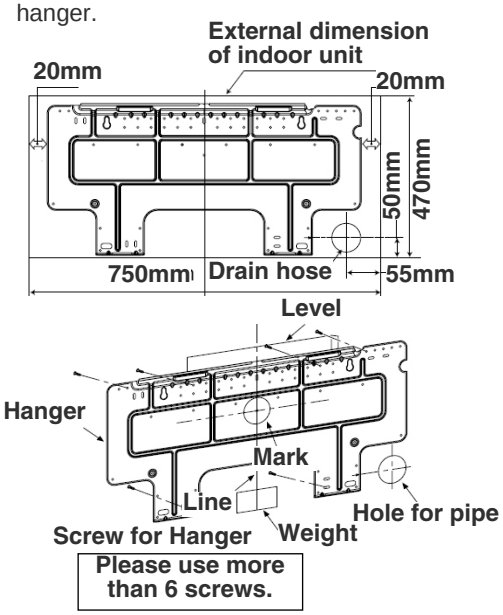

2. Wall installation

Direct mounting on the wall

- Please remove 3 screws and clip which fix to the stand and cabinet. (As shown in the figure below)

- Please remove the screws which fix the cabinet and hanger.
- Please use hidden beams in the wall to hold the hanger.

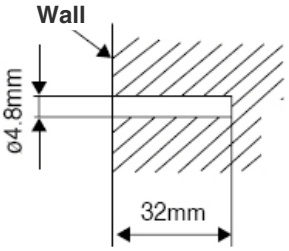

ⓘ CAUTION

- The draining of the water container inside the indoor unit can be done from the left. Therefore the hanger must be fixed horizontally or slightly tilted towards the side of drain hose. Otherwise, condensed water may overflor the water container.

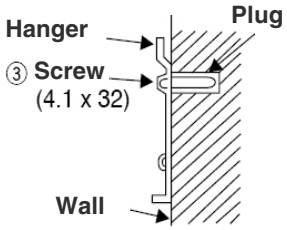

❖ **Procedure of installation and precautions.**

Procedure to fix the hanger and indoor unit.

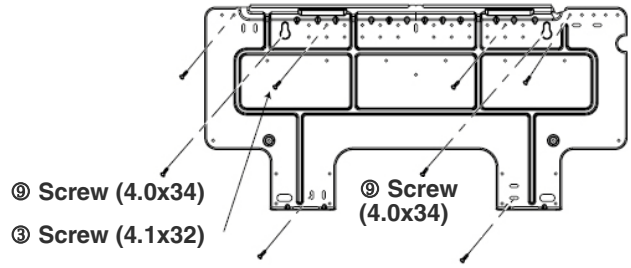

1. Drill holes on wall (As shown below)

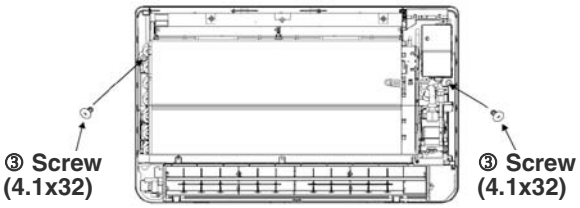

2. Push plug into the holes (As shown below)

3. Fix the hanger on wall with 4.1x32 and 4.0x34 screw. (As shown in figure below)

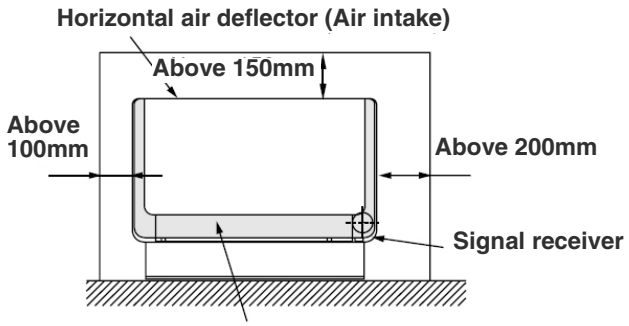

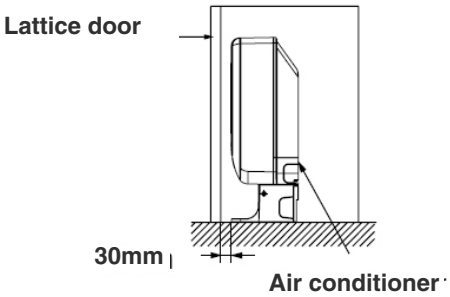

4. Fix the indoor unit on the wall with 4.1x32 screw.

3. Built-in installation

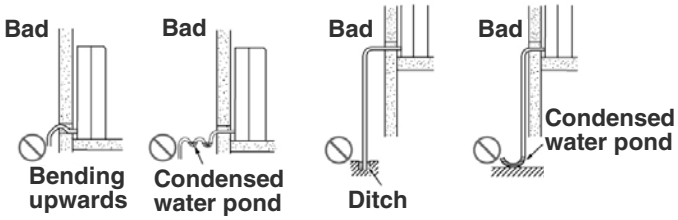

- If outlet is covered with the lattice door, room temperature may not be controlled properly. Therefore, air outlet must be open as much as possible.
- If air deflector of air outlet is adjusted too much upward, room temperature may not be controlled properly due to the heat inside the lattice door. Therefore, the deflector must be adjusted to nearly horizontal angle.
- If signal receiver is covered with the lattice door, signal receiving distance or range (angle) becomes smaller. Therefore, single receiver must not be covered with the lattice door.
- Only the vertical lattice door may be used. Besure to use a lattice door with an open area ratio of 75% or more. If another lattice door or one with an open area ratio of less than 75% is used, maximum performance may not be obtained.
- With a built-in installation, it may take more time to reach the set temperature after the unit is switched on.

4. Checking of drawing drain hose

- Connect the separate drain hose to the drain hose that is attached to the indoor unit.
- For keeping the smooth flowing of condensed water the drain hose should be inclined as shown in figure below.

ⓘ WARNING

- Be sure that the hose is not loosely connected or bent.

ⓘ CAUTION

- Please ensure the smooth flow of condensed water of the indoor unit during installation. (Carelessness may result in water leakage.)

10.1.3 INSTALLATION OF FLOOR TYPE INDOOR (RAF-RPA)

Please read the safety precautions carefully before operating the unit. The contents of this section are vital to ensure safety. Please pay special attention to the following signs.

ⓘWARNING Incorrect methods of installation may cause death or serious injury

ⓘCAUTION Improper installation may result in serious consequences.

⏚ Make sure to connect earth wire

⃠ This sign indicates prohibition

Be sure that the unit operates in proper condition after installation. Explain to customer the proper way of operating the unit as described in the user's guide.

ⓘ WARNING

- Please request your sales agent or qualified technician to install your unit. Water leakage, short circuit of fire may occur if you do the installation work yourself.
- Please observe the instructions stated in the installation manual during the process of installation. Improper installation may cause water leakage, electric shock and fire.
- Make sure that the units are mounted at locations which are able to provide full support of the weight of the units. If not, the units may collapse and impose danger.
- Observe the rules and regulations of the electrical installation and the methods described in the installation manual when dealing with the electrical work. Use power cables approved by the authorities of your country.
- Be sure to use the specified wire for connecting the indoor and outdoor units. Please ensure that the connections are tight after the conductors of the wire are inserted into the terminals. Improper insertion and loose contact may cause over-heating and fire.
- Please use the specified piping set for the correct refrigerant gas. Otherwise, this may result in broken copper pipes or faults
- When installing or removing an air conditioner, don not allow air or moisture to remain in the refrigeration cycle. Otherwise, pressure in the refrigeration cycle may become abnormally high may cause a rupture.
- Be sure to ventilate fully in case refrigerant gas leaks while at work. If the refrigerant gas comes into contact with fire, poisonous gas might be discharged.
- After completion of installation work, check to make sure that there is no refrigeration gas leakage. If the refrigerant gas leaks into the room, coming into contact with fire in a fan-driver heater, space heater, etc; poisonous gas may be emitted.
- Unauthorized modifications to the air conditioner may be dangerous. If a breakdown occurs, please contact a qualified air conditioner technical or electrician. Improper repairs may result in water leakage, electric shock and fire.
- Be sure to connect the earth wire from power supply wire to the outdoor unit and between the outdoor and indoor unit. Improper grounding may cause electric shock. ⏚

⚠ CAUTION

- A circuit breaker or fuse must be installed. Without a circuit breaker or fuse, the danger of electric shock exists. A main switch with a contact gap of more than 3.5mm has to be installed in the power supply line to the outdoor unit.
- Do not install the unit near a location where there is a flammable gas. The indoor unit may catch fire if flammable gas leaks around it.
- Be sure to tighten the flare nut to the specified torque using a toque wrench. If the flare nut is tightened excessively, it may crack as time elapses, causing the refrigerant leakage.
- Please ensure smooth flow of water when installing the drain hose.
- Piping shall be suitable supported with a maximum spacing of 1m between supports
- An IEC approved power cord should be used. Power cord type: NYM.

The choice of mounting site

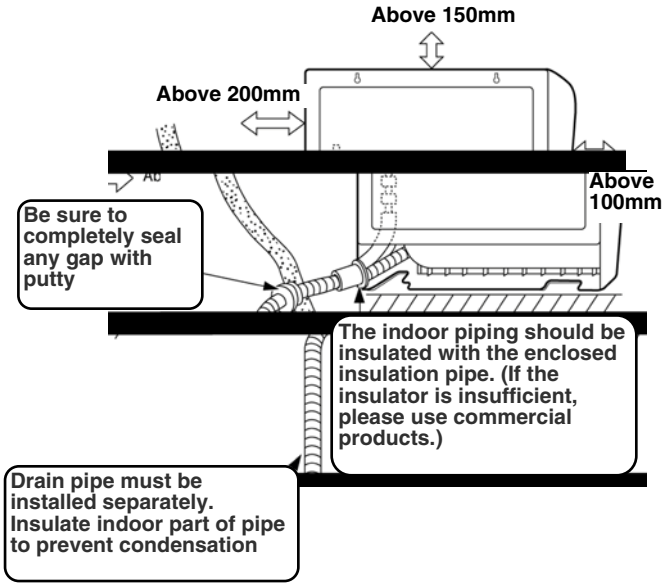

⚠ WARNING

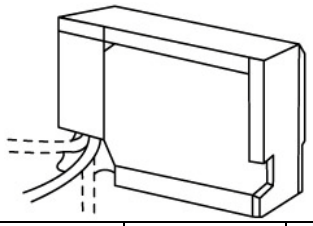

- The unit should be mounted at stable, non-vibratory location which can provide full support to the unit.

⚠ CAUTION

- No nearby heat source and no obstruction near the air outlet is allowed.
- The clearance distances from top right and left are specified in figure below.
- The location must be convenient for water drainage and pipe connection with the Outdoor unit.
- To avoid interference from noise, please place the unit and its remote controller at least 1m from the radio, television and inverter type fluorescent lamp.
- To avoid any error in signal transmission form the remote controller, please put the controller far away from high-frequency machines and high-power wireless systems.

Indoor unit installation

Piping configuration may be in three different directions: direct rear piping, right downward piping and right sideway piping.

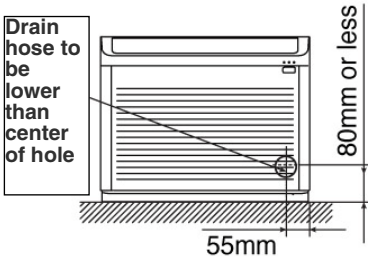

Model Floor Type	Maximum piping length (m)	Minimum piping length (m)	Maximum height (m)
RAF-25RPA	10	5	20
RAF-35RPA	10	5	20
RAF-50RPA	10	5	20

Installation of wall penetration and installation of protection pipe

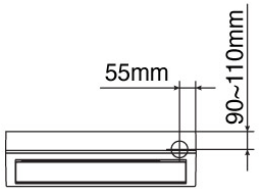

1. Hole position
   - Make a hole on the wall such as the position shown below, in order to keep the flow for condensed water smooth

Hole position

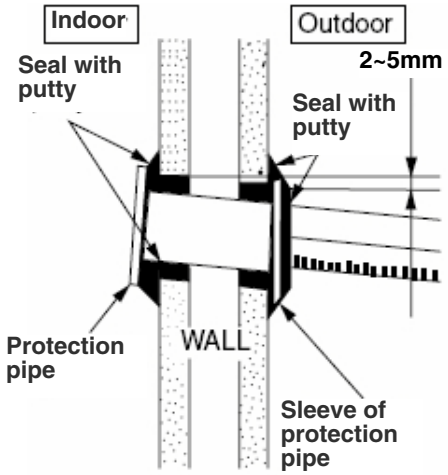

In case of making a hole on the wall

In case of making a hole on the floor

2. Wall Penetration and Installation of Protection Pipe
   - Drill an Ø65mm hole on wall which is slightly tilted towards the outdoor side. Drill the wall at a small angle
   - Cut the protection pipe according to the wall thickness
   - Empty gap in the sleeve of protection pipe should be completely sealed with putty to avoid dripping of rain water into the room.

⚠ WARNING

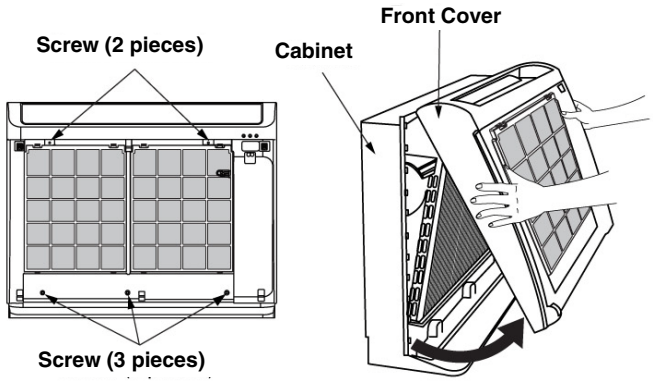

- Be sure that the wire is not in contact with any metal in the wall. Please use the protection pipe as wire passing through the hollow part of the wall so as to prevent the possibility of damaged by mouse. Unless it seals completely, any air with high humidity flows from outdoor and dew may drop.

Installation of the indoor unit

■ How to remove the front cover

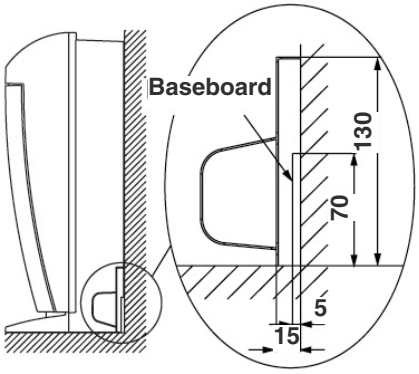

1. Remove the front panel (refer to instructions on the reverse of this sheet)
2. Remove the front cover
   - Remove the two bottom screws and two top screws. Pull the front cover approximately 30mm towards you.

※ When attaching the front cover, follow the above procedure in reverse order. Make sure the hooks at the front cover top surface are securely inserted into the cabinet.

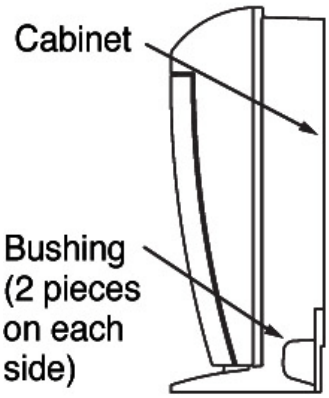

- If there is a baseboard

If the baseboard is 5~15mm in thickness or 70~130mm in height, cut the pipe bushing to conform to the baseboard.

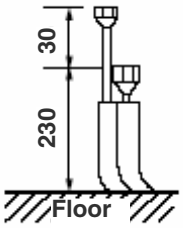

For sideways piping

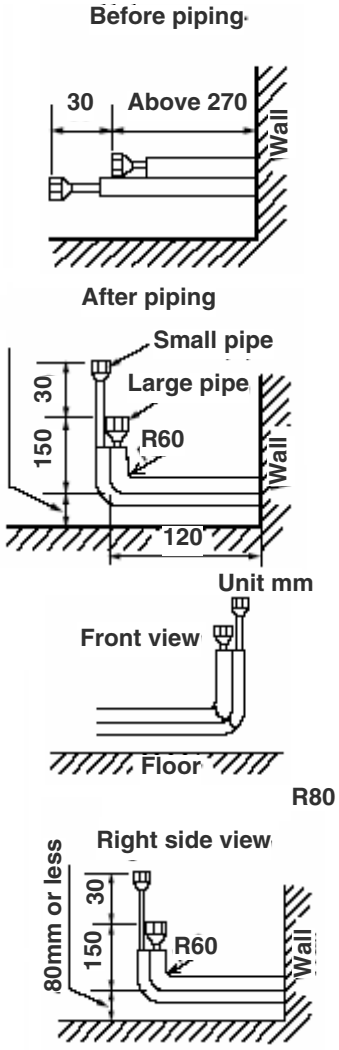

For right or left sideways piping, cut the cabinet's bushing with a plastic cutter or similar tool and use a file for an attractive finish.

Connecting the pipe to indoor unit

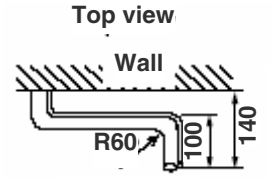

- Draw in the pipes through the hole of the wall or the floor to indoor.
- Arrange the pipe shown below. In the case that large pipe and small pipe arrange to make in front and behind.
- The indoor piping should be insulated with the enclosed insulation pipe.
- The pipe should first be cut longer than the length shown below.
- The excess section of the pipe should be cut off during pipe connection.
- In the case of make a hole on the floor

- In case of make a hole on the wall

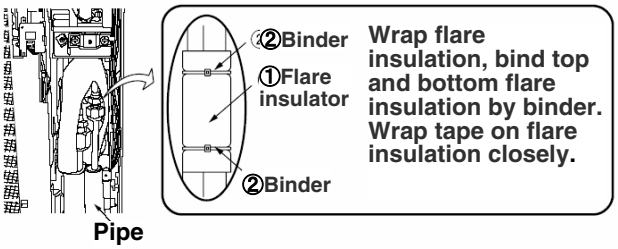

- **Sideways piping**

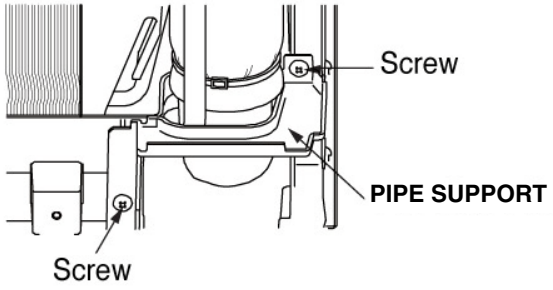

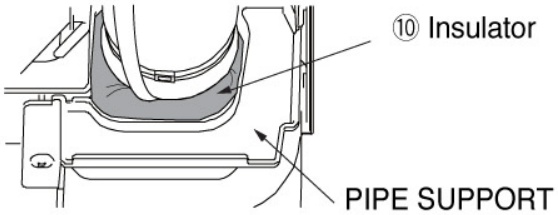

① WARNING

- For sideways piping, do not install the drain hose sideways. Connect the drain hose so that it comes out directly.
- Sideways installation of the drain hose will prevent it from sloping downward, causing water leakage. To avoid dripping, make sure to pass the drain hose under the pipe.
- Remove the PIPE SUPPORT.
- Insert the drain hose into the hole in the wall.
- Winding insulation pipe for drain hose and taping 4 or 5 places to fix.
- Connect the pipe to the indoor unit
- After completing the piping connection, cover the connector with a insulator

- Since there is some space between PIPE SUPPORT and the pipe, affix the insulator ⑩ to the PIPE SUPPORT. As shown in the figure below, affix the insulator ⑩ to the PIPE SUPPORT to sandwich it.

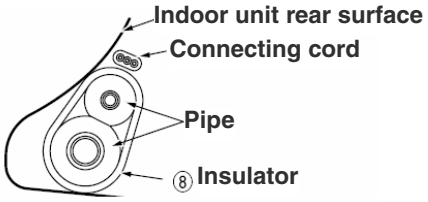

- After connecting the pipes and connecting cord, be sure to screw PIPE SUPPORT, tightly and fix the pipes and connecting cord.
- Position the each-to-attach side of PIPE SUPPORT (after aligning it with the pipe) to face the front and secure it with a screw. (Be sure to install PIPE SUPPORT to prevent rodents from entering the indoor unit).

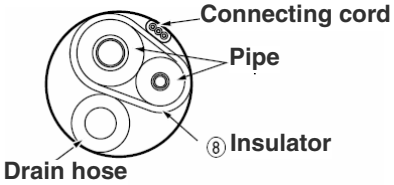

① CAUTION

- When mounting the flare insulator ①, make sure there is a space between the insulator and left of resin part. Otherwise, may cause water dripping.
- To prevent the pipe connector from contacting the front cover, push the connector as far as it goes.
- Arrange the connecting cord, pipes and drain hose neatly and store them in the bottom section of the rear surface of the indoor unit

Pipe layout of the unit rear surface

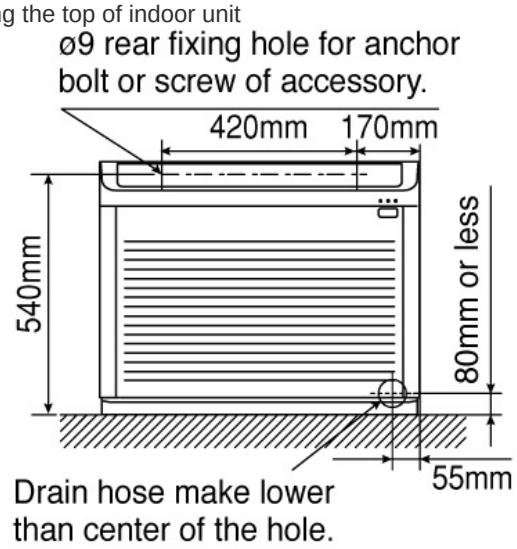

Pipe/drain hose layout when passing through the file in a wall.

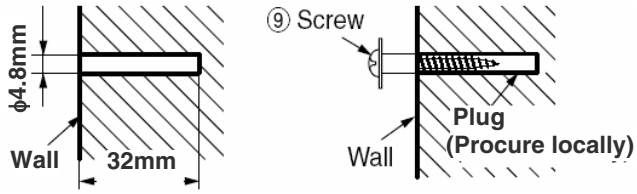

■ **Fixing the indoor**

Fixing the top of indoor unit

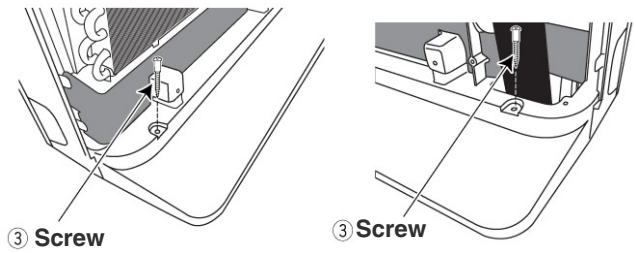

① WARNING

- Even if there is space between the indoor unit and the back wall, make sure to securely attach the indoor unit to the wall, ceiling or floor using wire to prevent it from falling.
- In the case of fixing by the anchor bolt, bury the Ø6 anchor bolt into the wall as shown in below. Lift up the indoor unit slightly and hang.
- In the case of fixing by screw of accessory
- Bury the plug into the wall as shown in below to attach the screw ⑨. Lift up the indoor unit slightly and hang.

Fixing the base of indoor unit

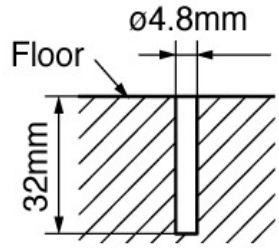

- Fix the base of indoor unit on the floor with 4.1 x 63mm screws. (Right and left)

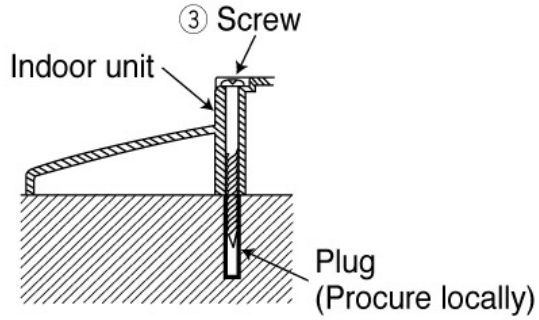

① WARNING

- Be sure to attach screw ③ to prevent the indoor unit from overturn.
- When fixing the indoor unit above the ground, be sure to fix an L-angle at the bottom to support it
- To drill holes, either Case 1 or 2 may be used.

1. Drill holes on floor.

2. Push plug into the holes

BUILT-IN INSTALLATION

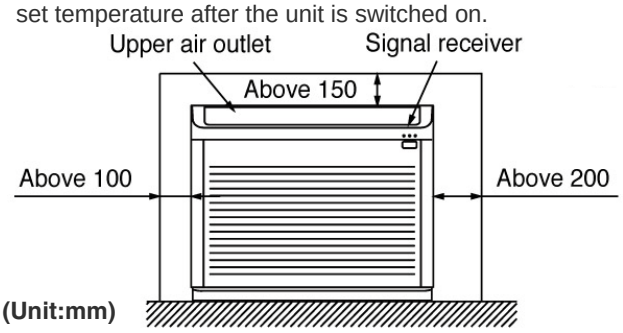

①If upper or lower air outlet is covered with lattice door, room temperature may not be controlled properly. Therefore, air outlet must be opened as much as possible.

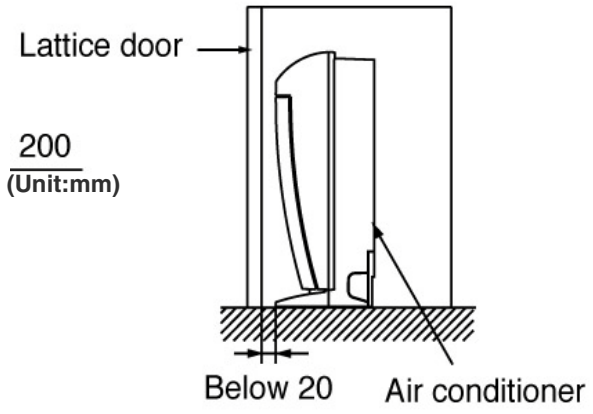

②If air deflector or upper air outlet is adjusted too much upward, room temperature may not be controlled properly due to the heat inside the lattice door. Therefore, the deflector must be adjusted to nearly horizontal angle.

③If signal receiver is covered with the lattice door, signal receiving distance or range (angle) becomes smaller. Therefore, signal receiver must not be covered with the lattice door.

④Only the vertical lattice door may be used. Be sure to use a lattice door with an open area ratio of 75% or more. If another lattice door or one with an open area ratio of less than 75 is used, maximum performance may not be obtained.

⑤With built-in installation it may take more time to reach the set temperature after the unit is switched on.

10.1.4 INSTALLATION OF 4 WAY CEILING CASSETTE TYPE INDOOR

Please read the safety precautions carefully before operating the unit. The contents of this section are vital to ensure safety. Please pay special attention to the following signs.

⚠WARNING Incorrect methods of installation may cause death or serious injury

⚠CAUTION Improper installation may result in serious consequences.

⏚ Make sure to connect earth wire

⊘ This sign indicates prohibition

Be sure that the unit operates in proper condition after installation. Explain to customer the proper way of operating the unit as described in the user's guide.

⚠ WARNING

- Please request your sales agent or qualified technician to install your unit. Water leakage, short circuit of fire may occur if you do the installation work yourself.
- Please observe the instructions stated in the installation manual during the process of installation. Improper installation may cause water leakage, electric shock and fire.
- Make sure that the units are mounted at locations which are able to provide full support of the weight of the units. If not, the units may collapse and impose danger.
- Observe the rules and regulations of the electrical installation and the methods described in the installation manual when dealing with the electrical work. Use power cables approved by the authorities of your country.
- Be sure to use the specified wire for connecting the indoor and outdoor units. Please ensure that the connections are tight after the conductors of the wire are inserted into the terminals. Improper insertion and loose contact may cause over-heating and fire.
- Please use the specified piping set for the correct refrigerant gas. Otherwise, this may result in broken copper pipes or faults
- When installing or removing an air conditioner, don not allow air or moisture to remain in the refrigeration cycle. Otherwise, pressure in the refrigeration cycle may become abnormally high may cause a rupture.
- Be sure to ventilate fully in case refrigerant gas leaks while at work. If the refrigerant gas comes into contact with fire, poisonous gas might be discharged.
- After completion of installation work, check to make sure that there is no refrigeration gas leakage. If the refrigerant gas leaks into the room, coming into contact with fire in a fan-driver heater, space heater, etc; poisonous gas may be emitted.
- Unauthorized modifications to the air conditioner may be dangerous. If a breakdown occurs, please contact a qualified air conditioner technical or electrician. Improper repairs may result in water leakage, electric shock and fire.
- Be sure to connect the earth wire from power supply wire to the outdoor unit and between the outdoor and indoor unit. Improper grounding may cause electric shock. ⏚

⚠ CAUTION

- A circuit breaker or fuse must be installed. Without a circuit breaker or fuse, the danger of electric shock exists. A main switch with a contact gap of more than 3.5mm has to be installed in the power supply line to the outdoor unit.
- Do not install the unit near a location where there is a flammable gas. The indoor unit may catch fire if flammable gas leaks around it.
- Be sure to tighten the flare nut to the specified torque using a toque wrench. If the flare nut is tightened excessively, it may crack as time elapses, causing the refrigerant leakage.
- Please ensure smooth flow of water when installing the drain hose.
- Piping shall be suitable supported with a maximum spacing of 1m between supports
- An IEC approved power cord should be used. Power cord type: NYM.

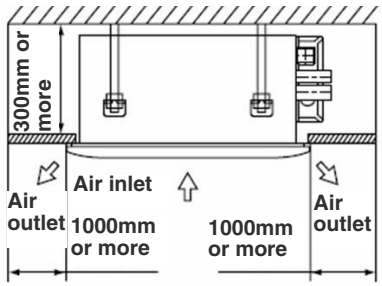

The choice of mounting site

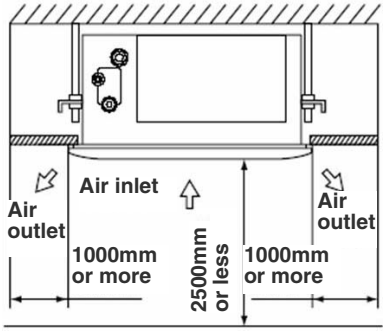

⚠ WARNING

- The unit should be mounted at stable, non-vibratory location which can provide full support to the unit.

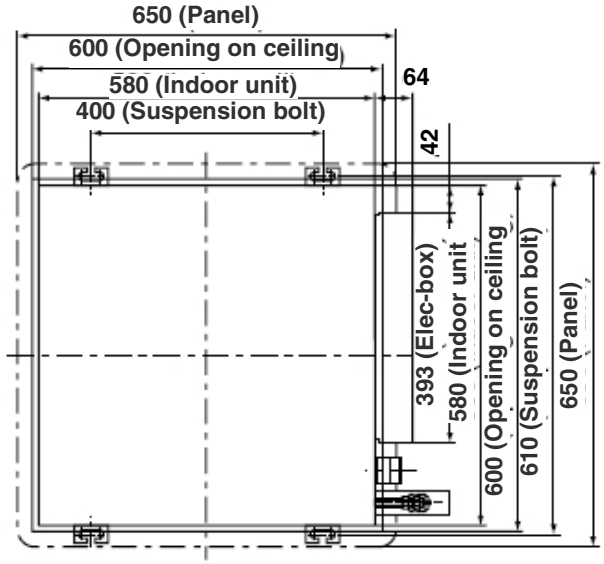

⚠ CAUTION

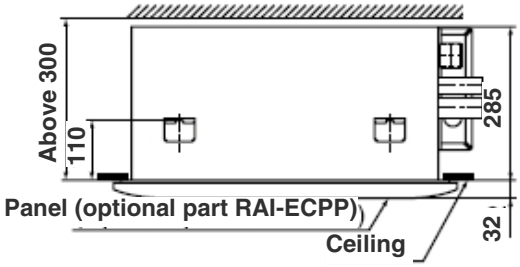

- No nearby heat source and no obstruction near the air outlet is allowed.
- The clearance distances from top right and left are specified in figure below.
- The location must be convenient for water drainage and pipe connection with the Outdoor unit.
- To avoid interference from noise, please place the unit and its remote controller at least 1m from the radio, television and inverter type fluorescent lamp.
- To avoid any error in signal transmission form the remote controller, please put the controller far away from high-frequency machines and high-power wireless systems.
- The installation height of indoor unit must be 2.3m or more.

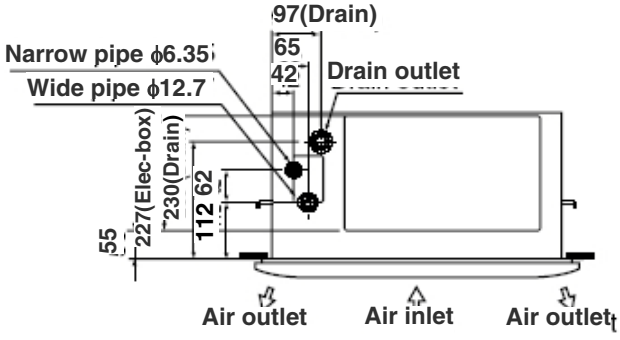

Opening on ceiling and suspension bolt

- Need a connecting work for refrigerant pipe, drain pipe and F cable in the ceiling after suspending the indoor unit. Arrange drain pipe, refrigerant pipe and F cable in their installation position.
- For finishing of opening on ceiling, arrange with builder in detail.
- If ceiling is already completed, connecting cables between indoor and outdoor, piping and drain piping must be done before fitting the indoor unit

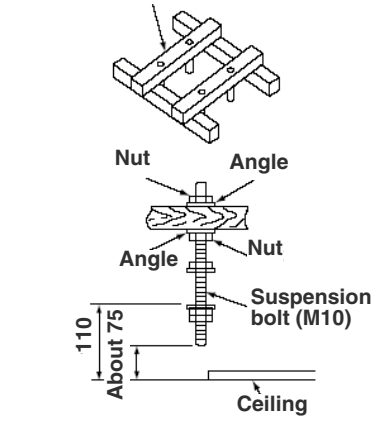

Preparation for installing the indoor unit

Installation of suspension bolts

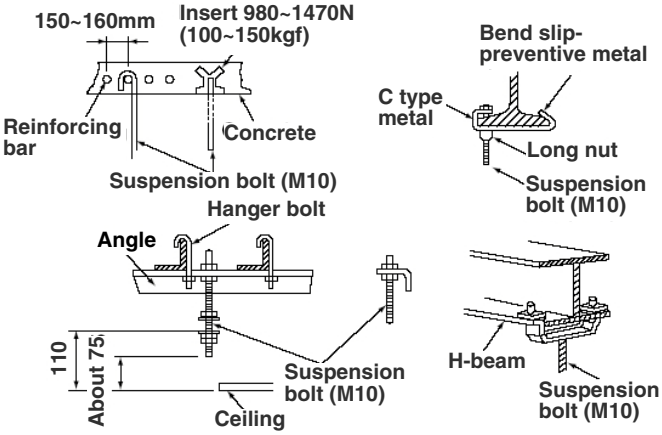

- Be sure to reinforce furring of ceiling (frame: ceiling joints and supporter) to maintain level of ceiling and prevent vibration of ceiling plate.
- Suspension bolts should be purchased in the field.
- Refer to the diagrams shown below for length of suspension bolts.

In case of wooden frame

60~90mm square piece of lumber

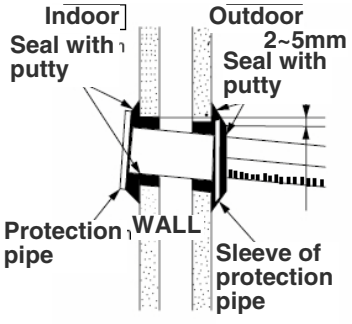

In case of steel frame

Wall Penetration and Installation of Protection Pipe

- Drill a ø65mm hole on wall watch which is slightly titled towards the outdoor side. Drill the wall at a small angle.
- Cut the protection pipe according to the wall thickness.
- Empty gap in the sleeve of protection pipe should be completely sealed with putty to avoid dripping of rain water into the room

① CAUTION

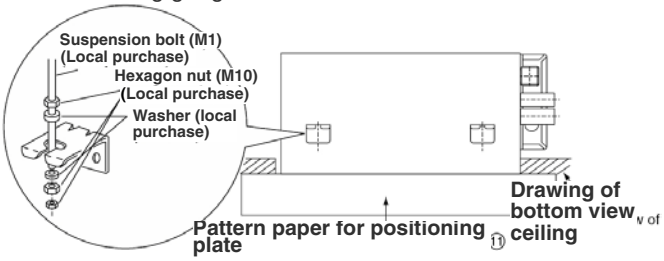

- Be sure that the wire is not in contact with any metal in the wall. Please use the protection pipe as wire passing through the hollow part of the wall so as to prevent the possibility of damaged by rodents.

① WARNING

- Be sure to use protection pipe (commercial product). If the cables are touching metal body inside the wall or if the wall is hollow where rodents could damage the cables, this might cause electrical shock or fire. Incomplete sealing could also allow the high humid air from inside the wall or outside the room to leak in and cause water drip.

Installation of Indoor unit

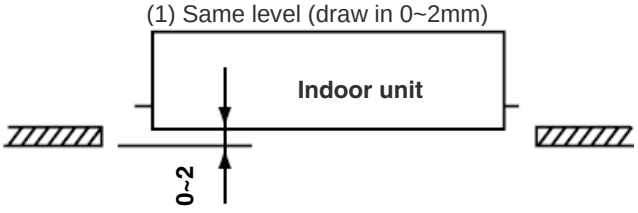

- Set nut and washer on suspension bolt and hook it to suspension clamp by lifting the indoor unit.
- Suspension bolt must have play of 20~30 mm on its right and left. If free play is not enough, fix the lifting lug to suspension bolt without attaching nut underneath the suspension bolt, then attach nut and install indoor unit.
- Make sure that indoor unit is kept level using a levelling gauge

The space between bottom surfaces of ceiling and indoor unit

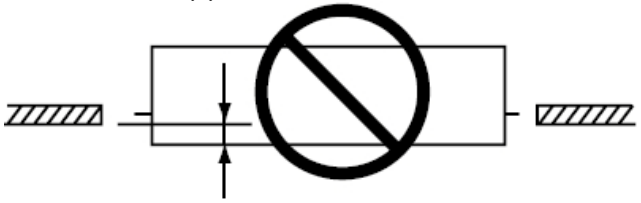

- Be sure to install the indoor units as follow position (1)

(1) Same level (draw in 0~2mm)

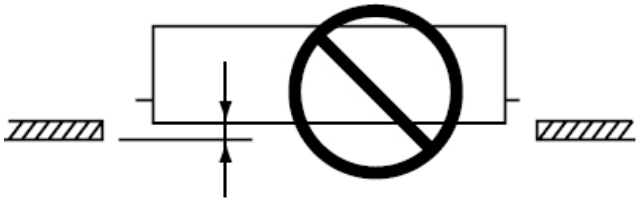

- Do not install the indoor units as follow position (2) or (3).

(2) Stick out above 0mm

(3) Draw in above 3mm

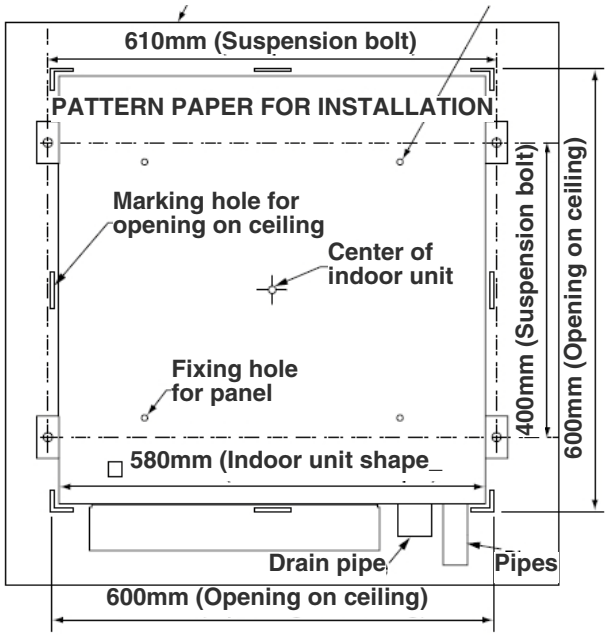

- Be sure that bottom face of indoor main unit is the same height (or expected height if the ceiling is yet to be constructed) as lower surface of the ceiling.

① CAUTION

- Be sure to install the indoor unit level. If the indoor unit is inclined, water may leak.
- If space between bottom surfaces indoor unit and ceiling is not correct, the may be a gap between the panel and indoor unit, causing condensed water to drip.
- If ceiling is constructing after the installation of air conditioner, be sure to attach a patter paper for installation that shows ceiling opening dimension.

Pattern paper for installation plate ⑫ **Installation plate fixing screw ⑬**

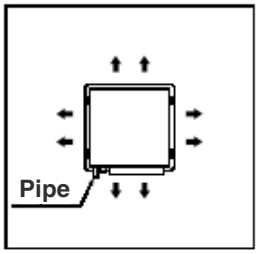

NOTE

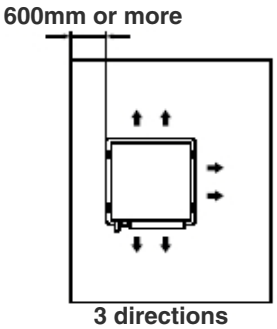

Pease use this pattern paper to decide the suspension bolt position. Apply by putting the reverse side onto the ceiling surface

Selecting the Mounting Position

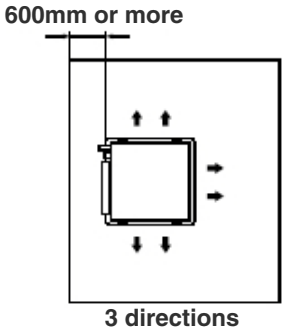

The installation place is very important for the air conditioner because it is very difficult to mover from one place to another after the first installation. Decide the mounting position together with the customer. The discharge direction can be selected as shown below.

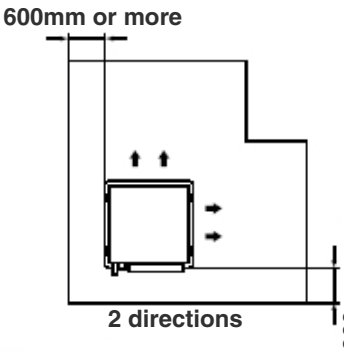

4 directions

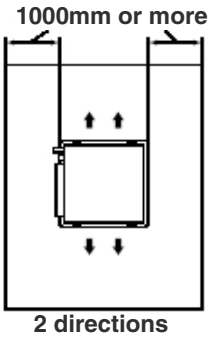

3 directions

3 directions

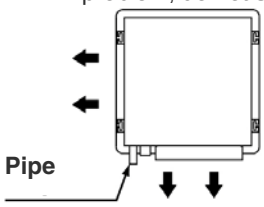

2 directions

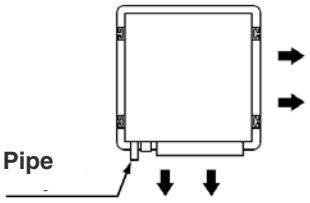

2 directions

① CAUTION

- Since 2-way outlet shown below cause performance problem, do not set it.

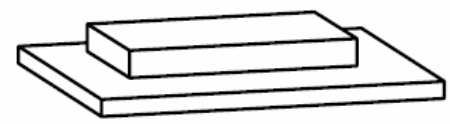

Blower cover installation

Install the blower cover only to the air outlet direction which is not in use.

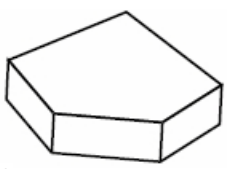

Install the blower cover at the diffuser shown. Fix the blower cover securely.

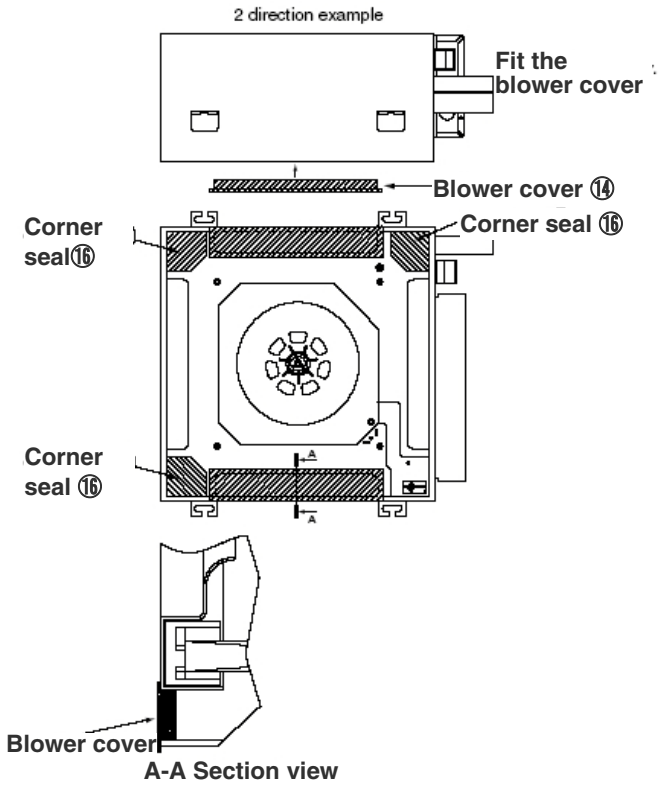

Corner seal installation

Install the corner seal at position shown. Fix the corner seal securely.

Shall be installed regardless to 2 directions, 3 directions or 4 directions.

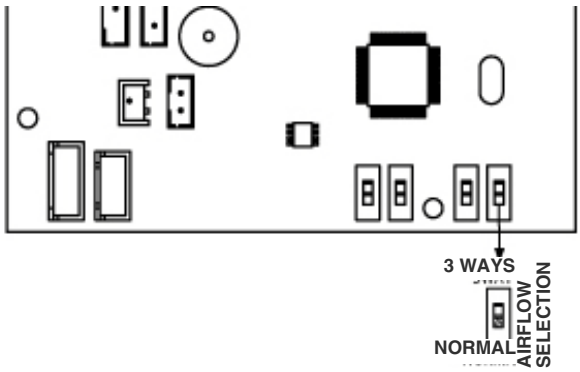

2 direction sample

A-A Section view

Selecting the Air flow switch

1. Turn power off.
2. Remover cover of the electrical box
3. When selecting discharge direction of 2 directions or 3 directions, select the “AIR FLOW SELECTION” on the main PWB to 3 way.
   When selecting discharge direction to 4 directions, select the “AIR FLOW SELECTION” on the switch PWB to NORMAL.

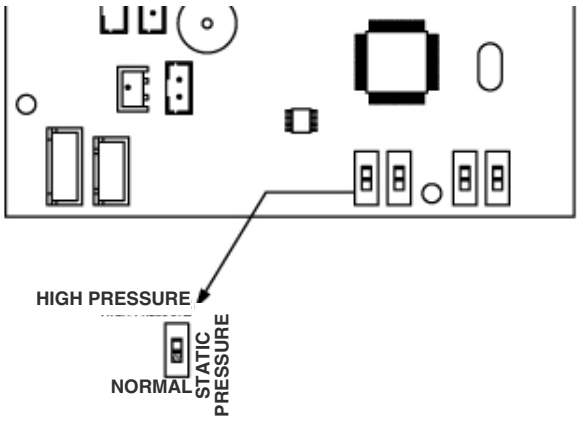

NOTE:
During 2 directions or 3 directions, sound level will increase.

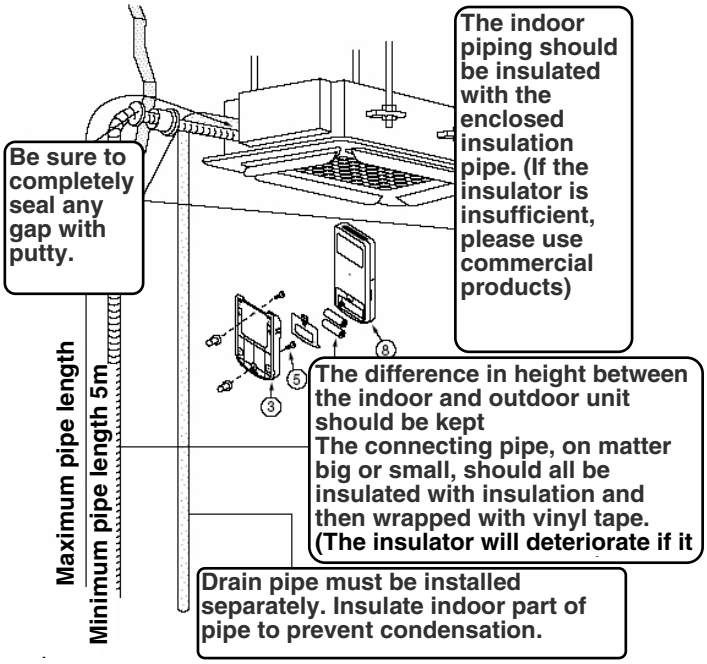

Selecting the Air flow switch

1. Turn power off.
2. Remover cover of the electrical box
3. When install the indoor unit 2500mm or more form the floor, select the “STATIC PRESSURE SW” on the main PWB to HIGH PRESSURE

   When install the indoor unit below than 2500mm from floor, select the “STATIC PRESSURE SW” on the main PWB to NORMAL

STATIC PRESSURE SW is used for increasing the fan speed according to the situation of the trial operation inside the room with ceiling height 2.5m and above. However noise gets slightly higher.

Installation of Ceiling Panel

① WARNING

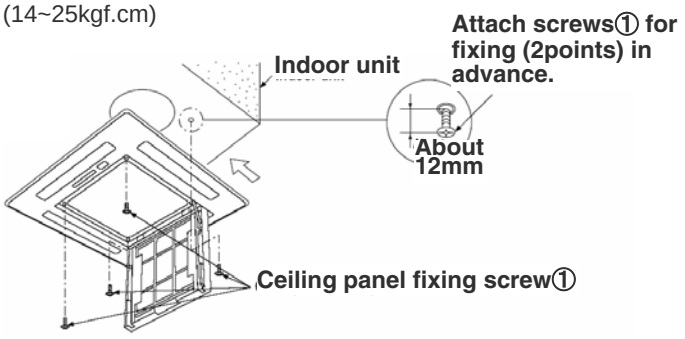

- Please handle the ceiling panel carefully (Be sure not to damage or make it dirty)

INSTALL CEILING PANEL

1. Attach screws (2points) for fixing ceiling panel to indoor unit with space of approximately 12mm between each other. (Temporary fixing of ceiling panel cannot be done without having space)
2. Press the mark “PUSH” on the left and right sides of the suction grille.
3. Insert elongated holes (2p points) on ceiling panel to the screws for fixing the panel and slide the panel towards the directions shown by arrow. And fix temporarily with screws for fixing the panel on suction grille stopper side (2 points)
4. Tighten the screws for fixing the panel (4 points)

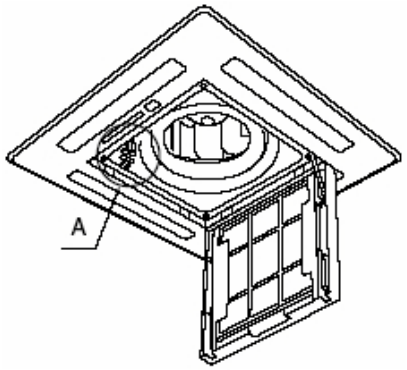

HOW TO SCREW FOR CEILING PANEL

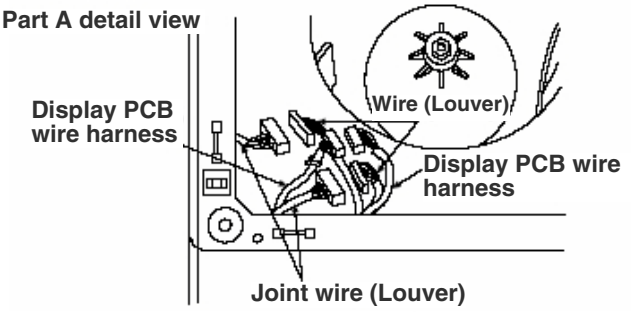

① **CAUTION** Fixing screw ①torque 1.47~2.45Nm. (14~25kgf.cm)

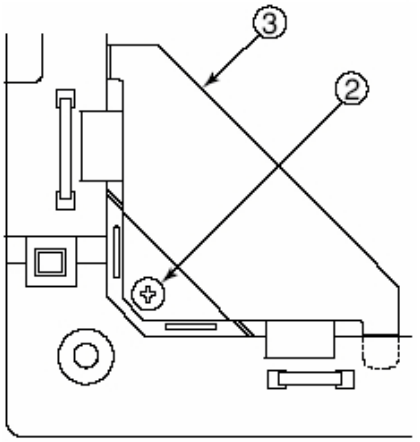

HOW TO ARRANGE CONNECTORS AND LEAD WIRES

Connect the connectors in accordance to part A detail view, then cover the connectors and lead wires with connector cover③ tighten the screws for fixing the connector cover by using tapping screw②

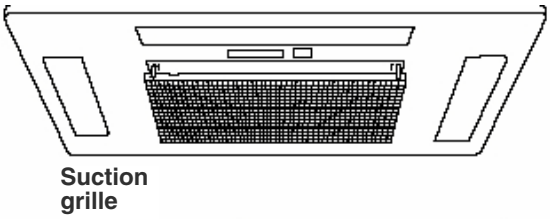

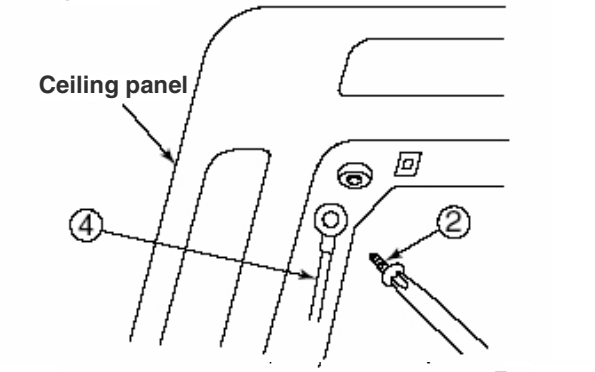

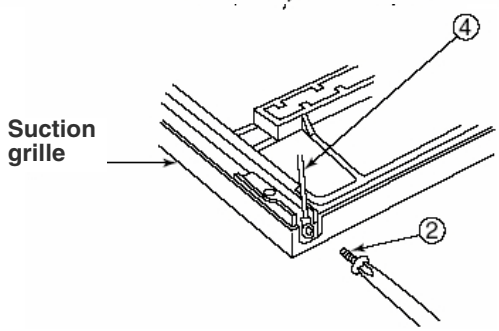

HOW TO INSTALL SAFETY CABLE

Fix safety cable④ connecting the ceiling panel and the suction grille (2 portions) by using tapping screw②

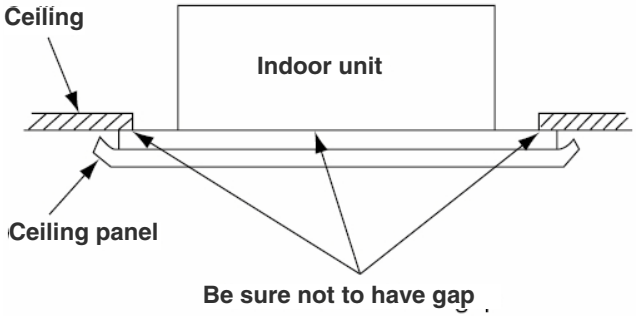

CONFIRMATION POINTS AFTER INSTALLATION

- Is there a gap between the ceiling panel and indoor unit, ceiling panel and ceiling?

⚠ CAUTION

The gap can cause water dripping.

- Is air filter attached properly?

TRIAL OPERATION

Execute trial operation to confirm the air conditioner is working normally (movement of vertical deflector, receiving signals from remote controller, etc)

Explain operation of this unit to the customers following the procedure on operation manual.

Is timer lamp not blinking? (If drain pump trial operation switch is in '"trial operation" mode, timer lamp blinks 7 times)

10.1.5 INSTALLATION OF NORMAL STATIC PRESSURE DUCT TYPE INDOOR

Please read the safety precautions carefully before operating the unit. The contents of this section are vital to ensure safety. Please pay special attention to the following signs.

⚠WARNING Incorrect methods of installation may cause death or serious injury

⚠CAUTION Improper installation may result in serious consequences.

⏚ Make sure to connect earth wire

⊘ This sign indicates prohibition

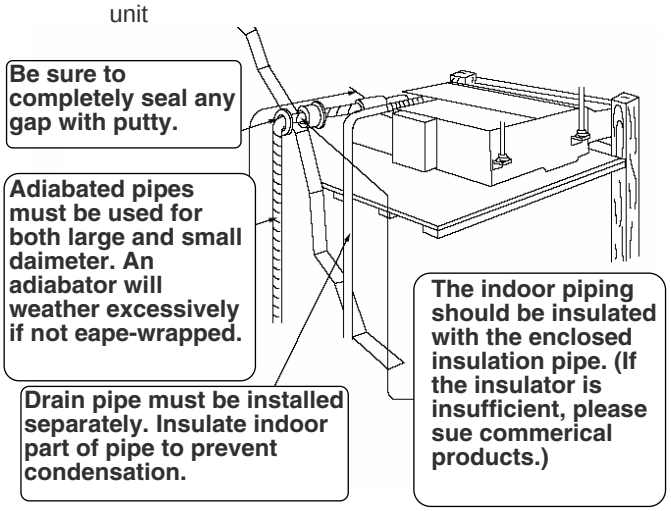

Be sure that the unit operates in proper condition after installation. Explain to customer the proper way of operating the unit as described in the user's guide.

⚠ WARNING

- Please request your sales agent or qualified technician to install your unit. Water leakage, short circuit of fire may occur if you do the installation work yourself.
- Please observe the instructions stated in the installation manual during the process of installation. Improper installation may cause water leakage, electric shock and fire.
- Make sure that the units are mounted at locations which are able to provide full support of the weight of the units. If not, the units may collapse and impose danger.
- Observe the rules and regulations of the electrical installation and the methods described in the installation manual when dealing with the electrical work. Use power cables approved by the authorities of your country.
- Be sure to use the specified wire for connecting the indoor and outdoor units. Please ensure that the connections are tight after the conductors of the wire are inserted into the terminals. Improper insertion and loose contact may cause over-heating and fire.
- Please use the specified piping set for the correct refrigerant gas. Otherwise, this may result in broken copper pipes or faults
- When installing or removing an air conditioner, don not allow air or moisture to remain in the refrigeration cycle. Otherwise, pressure in the refrigeration cycle may become abnormally high may cause a rupture.
- Be sure to ventilate fully in case refrigerant gas leaks while at work. If the refrigerant gas comes into contact with fire, poisonous gas might be discharged.
- After completion of installation work, check to make sure that there is no refrigeration gas leakage. If the refrigerant gas leaks into the room, coming into contact with fire in a fan-driver heater, space heater, etc; poisonous gas may be emitted.
- Unauthorized modifications to the air conditioner may be dangerous. If a breakdown occurs, please contact a qualified air conditioner technical or electrician. Improper repairs may result in water leakage, electric shock and fire.
- Be sure to connect the earth wire from power supply wire to the outdoor unit and between the outdoor and indoor unit. Improper grounding may cause electric shock. ⏚

① CAUTION

- A circuit breaker or fuse must be installed. Without a circuit breaker or fuse, the danger of electric shock exists. A main switch with a contact gap of more than 3.5mm has to be installed in the power supply line to the outdoor unit.
- Do not install the unit near a location where there is a flammable gas. The indoor unit may catch fire if flammable gas leaks around it.
- Be sure to tighten the flare nut to the specified torque using a toque wrench. If the flare nut is tightened excessively, it may crack as time elapses, causing the refrigerant leakage.
- Please ensure smooth flow of water when installing the drain hose.
- Piping shall be suitable supported with a maximum spacing of 1m between supports
- An IEC approved power cord should be used. Power cord type: NYM.
- "Height difference " and "Piping length" of Indoor and Outdoor unit differs depending on the Outdoor unit. Please refer to the "Installation manual" in Outdoor unit

Proper place for Installation

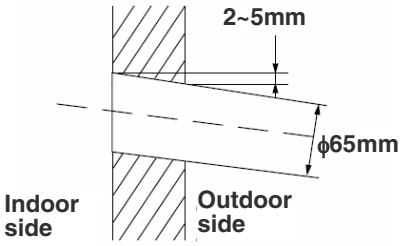

Indoor unit

Refrigerating pipes can be drawn from the back, the under the left side of the indoor unit. In the case that refrigerating pipes are drawn form the left side, confirm the smooth flowing of condensed water. If not, the condensed water will overflow into the room. When the pipes are drawn from the right or left side, the pipes can be connected easily by configuration the pipes before installation.

Installation procedure and notice

Especially, the selection of installation place need great care for the split type air conditioner, because it is very difficult to move from place to place after the first installation.

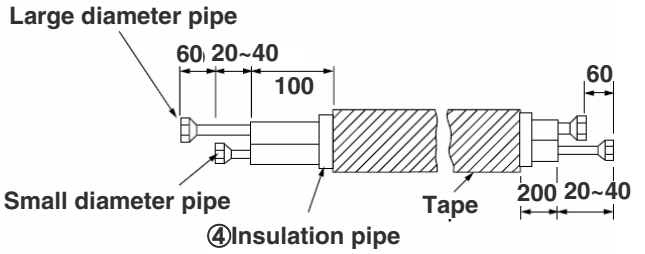

1. Make a hole on the wall such that the place as shown in figure in order to keep the flow of condensed water smooth.

2. Hole on wall should be made with some inclination as above for keeping the smooth flow of condensed water.

1. Connecting pipe installation

   - Seal the end of pipes to prevent from moisture and water

Unit: mm

INSTALLATION OF FULL DUCT TYPE

Full duct type

Need optional parts when install full duct type

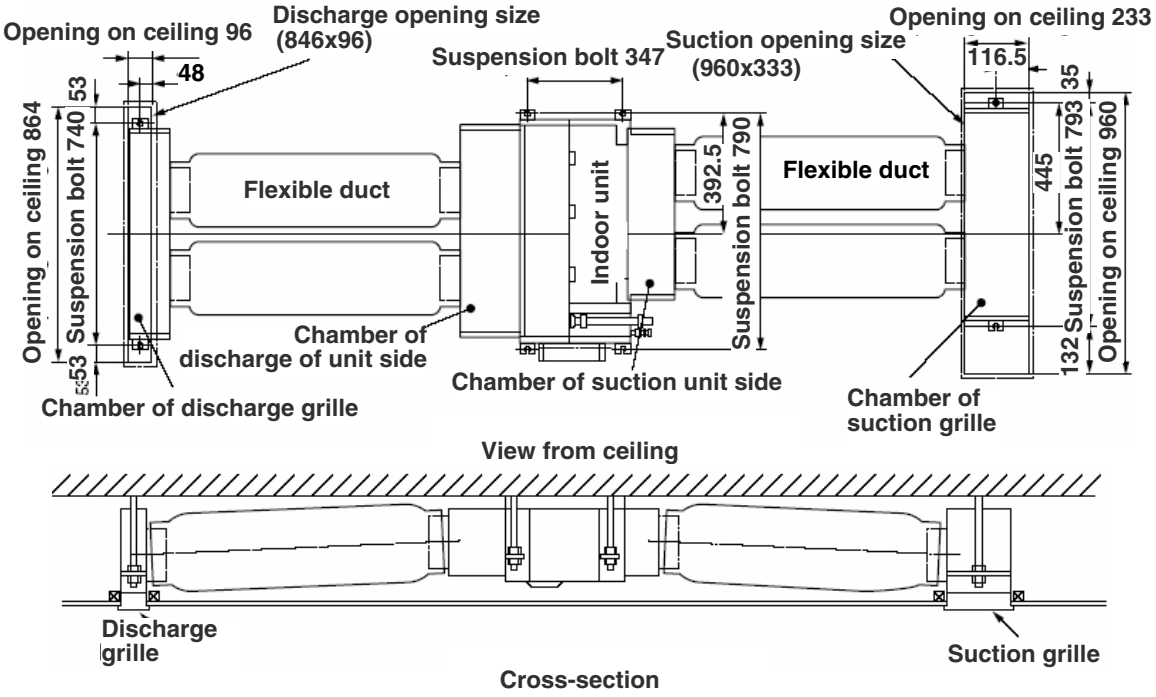

①	Discharge grille
②	Chamber of discharge grille Ø150mm
③	Chamber of discharge of unit side Ø150mm
④	Chamber of suction of unit side Ø150mm
⑤	Chamber of suction grille Ø150mm
⑥	Suction grille
⑦	Flexible duct Ø150mm 1m
	Flexible duct Ø150mm 2m

- Select the indoor unit position, fixing direction of air outlet so that cool/hot air reaches all the room. Standard position of the indoor unit is with the wall side on the ceiling.
- Permissible length and bending of duct.

	Permissible length	Bending
Discharging side duct	4m or less added to suction side	90° or less, 1 section
Suction side duct	1m or less	45° or less, 1 section

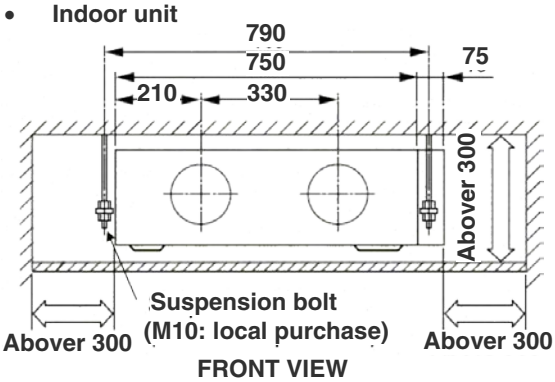

- Secure the space for installation, inspection or servicing.
- Apply water-proof treatment to back surface of ceiling under the indoor unit, to prevent water drop.
- Do not allow any obstacle to block air flow within 1m of suction grille.

1. Installation figure

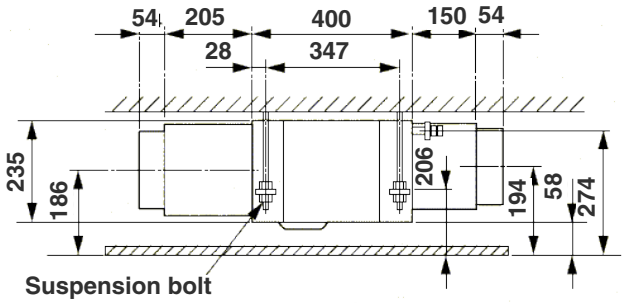

2. Opening on ceiling and suspension bolt position

- **Indoor unit**

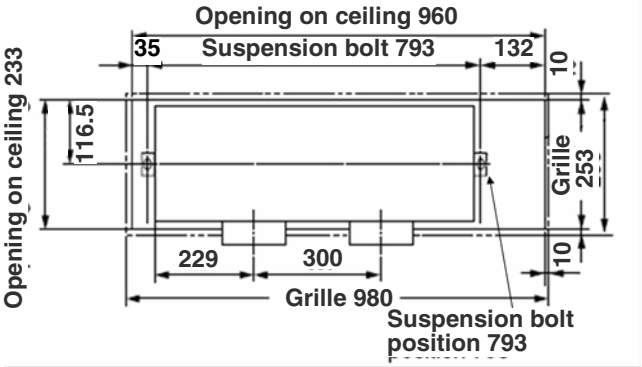

FRONT VIEW

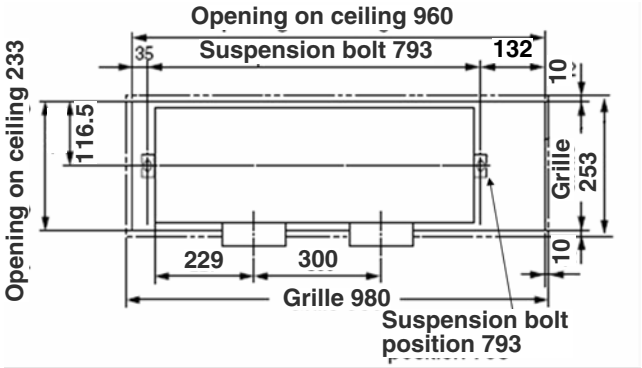

SIDE VIEW

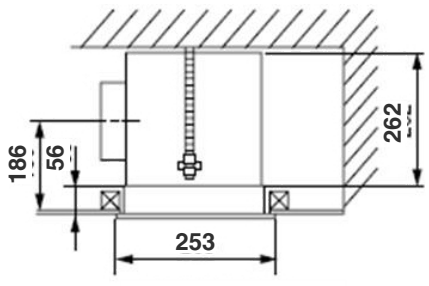

- **Chamber of suction grille**

PLANE VIEW

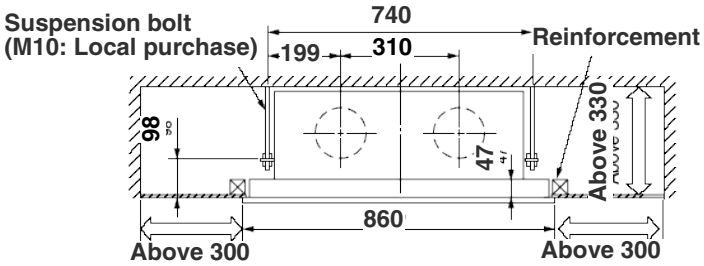

FRONT VIEW

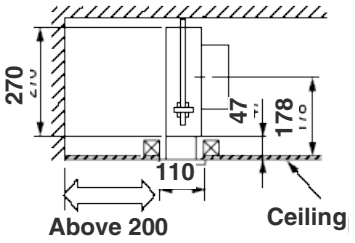

SIDE VIEW

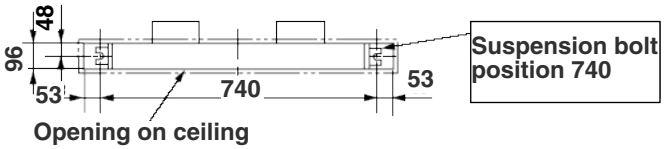

- **Chamber of discharge grille**

FRONT VIEW

SIDE VIEW

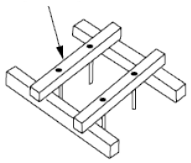

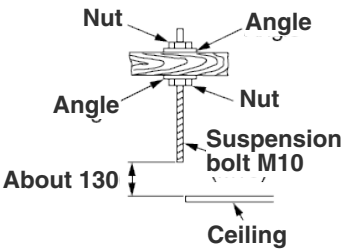

PLANE VIEW

- Arrange drain pipe, refrigerant pipe and connecting cord in their installation position.
- For finishing of opening on ceiling, arrange with builder in detail

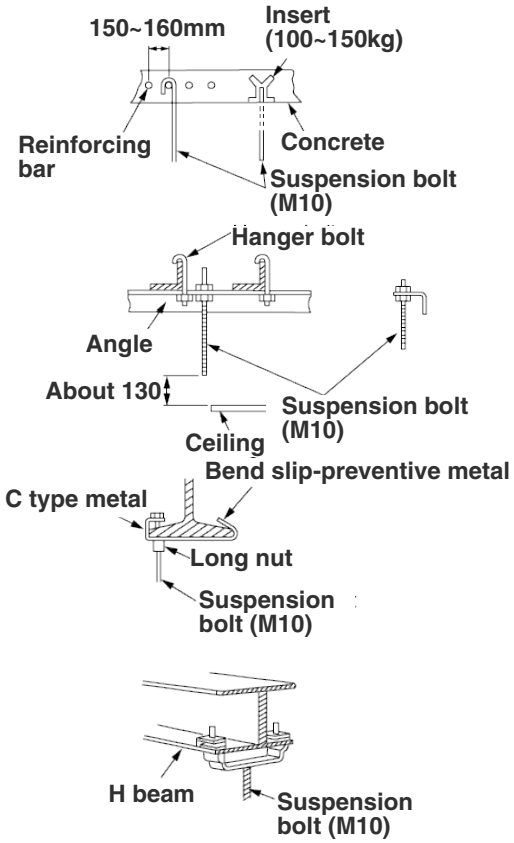

3. Installation of suspension bolt

- Be sure to reinforce furring of ceiling (frame: ceiling joint and supporter) to maintain level of ceiling and prevent vibration of ceiling plate.
- Suspension bolts should be purchased in the field
- Refer to diagrams shown below or length of suspension bolts.
- **In case of wooden frame**
  60~90mm square piece of lumber

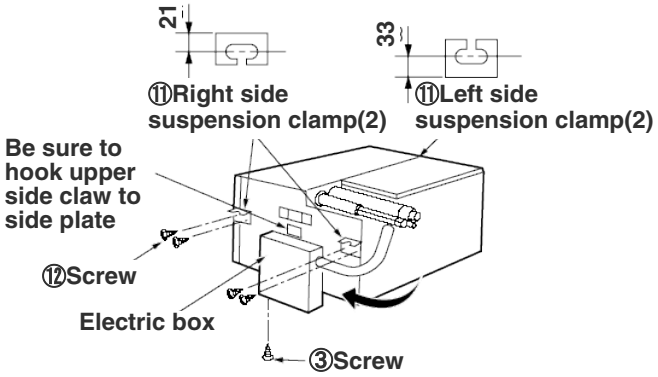

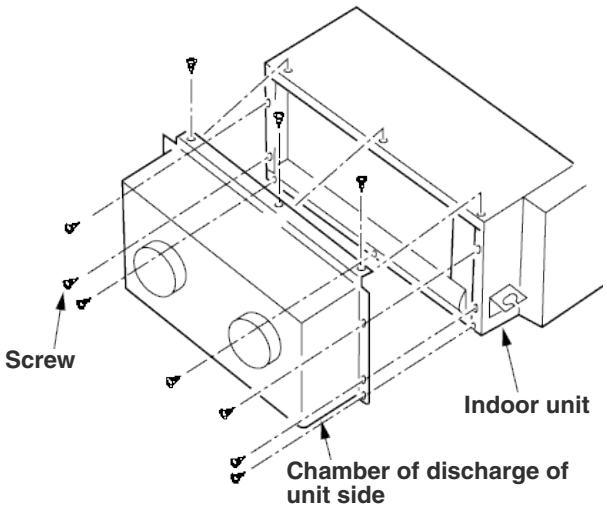

- **In case of steel frame**

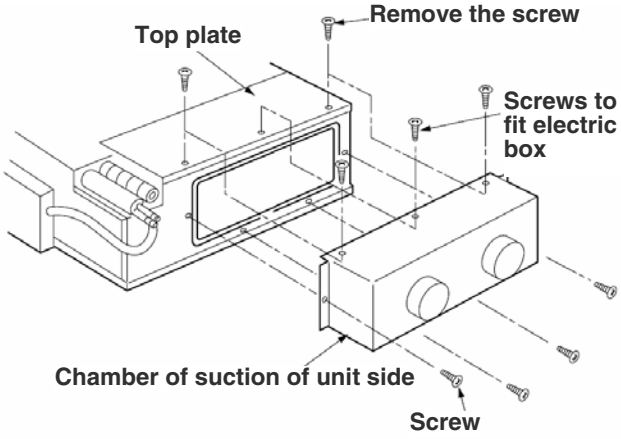

4. Preparation for installing indoor unit

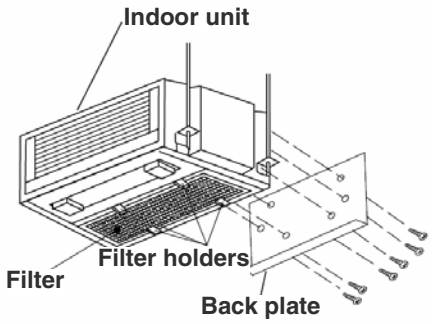

- Remove 1 screw by which electric box is installed, and then remove electric box
- Turn removed electric box with lead wires kept connected so that wire lead out section is positioned at the upper side, and hook the claw of electric box to side plate. Then fix the electric box to the bottom of the indoor unit using 1 screw.
- Install 4 suspension clamps at both sides of indoor unit, 2 clamps at each side, using 8 tapping screws. (Since size of left and right clamps are different for certain parts, refer to diagram on the bottom)
- Chamber of discharge of unit side (optional part: RAU-DU2) on the indoor unit using 10 tapping screws.

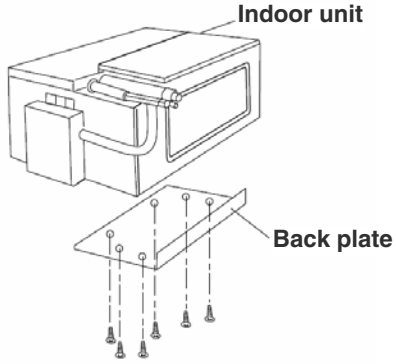

- Install bottom plates 1 and 2 on the bottom of the indoor unit using 9 tapping screws. (install bottom plate 1 first, followed by plate 2)
- Cut and open dotted line section for suction port at the back of the indoor unit, using nippers (2 locations)
- Remove 2 screws at top plate end of indoor unit and chamber of suction of unit side using 7 screws.

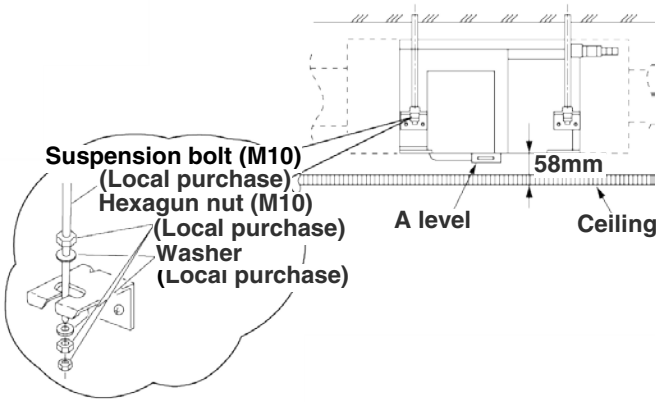

(1) Bottom side suction opening

(2) Back side suction opening

5. Installation of indoor unit

- Set nut and washer on suspension bolt and hook it to suspend clamp by lifting the indoor unit.
- Make sure that indoor unit is kept level using a level or vinyl hose with water.
- Fix the indoor unit so that the space between bottom surfaces of ceiling and indoor unit is 58mm.

① CAUTION

- Be sure to install the indoor unit level. If the indoor unit is inclined, water may leak.
- If the space between bottom surfaces of indoor unit and ceiling is not correct, there may be a gap between the grille and ceiling surface, which will cause dripping of condensed water.

INSTALLATION OF SEMI DUCT TYPE

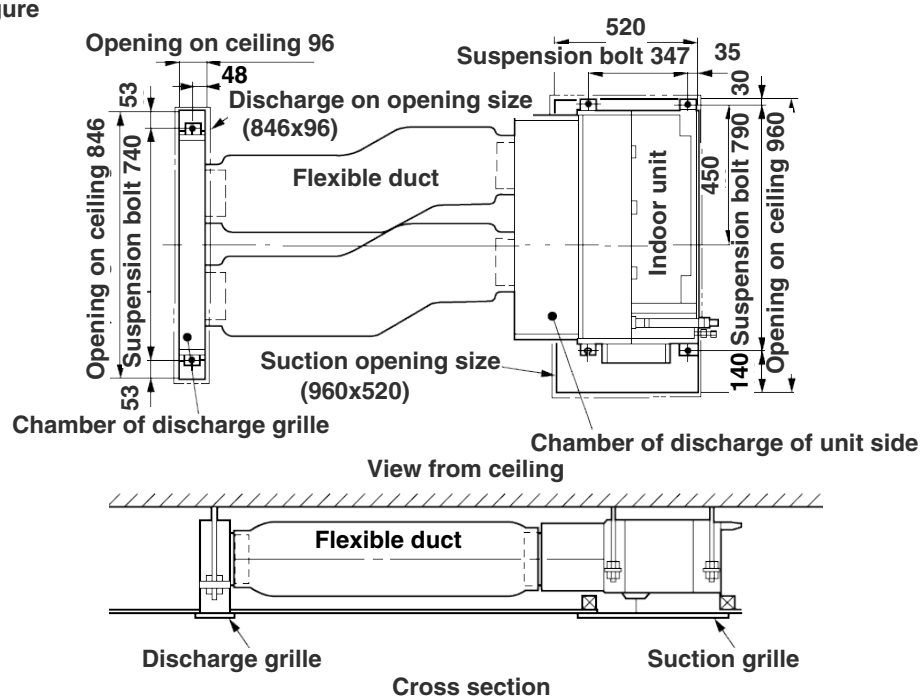

①	Discharge grille
②	Chamber of discharge grille Ø150mm
③	Chamber of discharge of unit side Ø150mm
④	Suction grille
⑤	Flexible duct Ø150mm 1m
	Flexible duct Ø150mm 2m

- Select the indoor unit position, fixing direction of air outlet so that cool/hot air reaches all the room. Standard position of the indoor unit is with the wall side on the ceiling.
- Permissible length and bending of duct.

	Permissible length	Bending
Discharging side duct	4m or less added to suction side	90° or less, 1 section

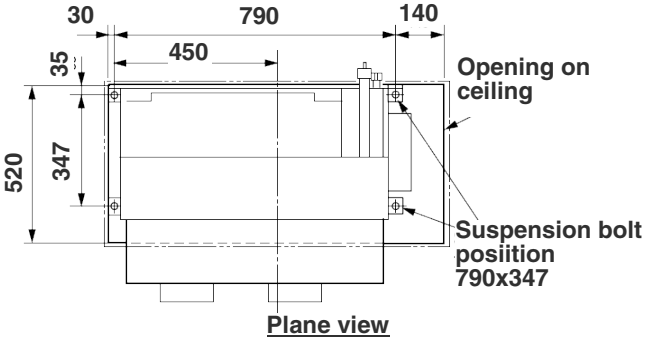

- Secure the space for installation, inspection or servicing.
- Apply water-proof treatment to back surface of ceiling under the indoor unit, to prevent water drop.
- Do not allow any obstacle to block air flow within 1m of suction grille
-

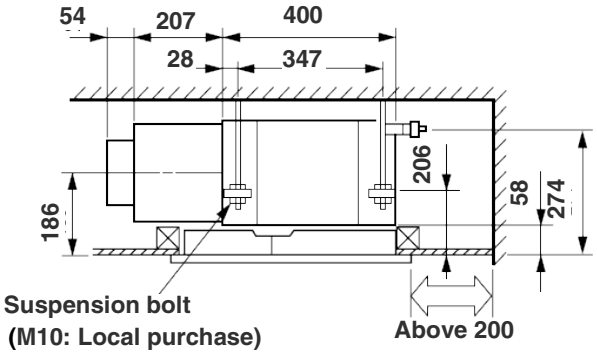

1. Installation figure

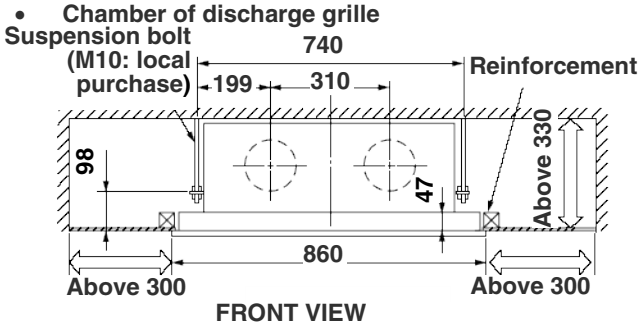

2. Opening on ceiling and suspension bolt position

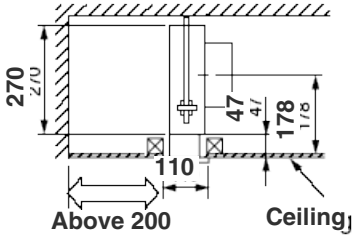

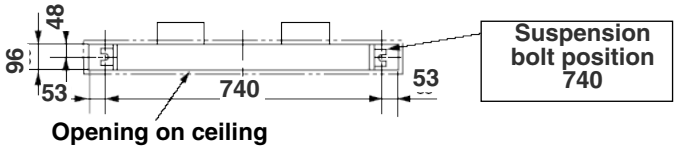

Side view

FRONT VIEW

SIDE VIEW

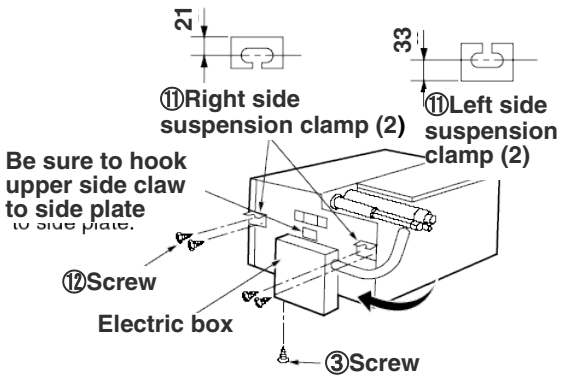

PLANE VIEW

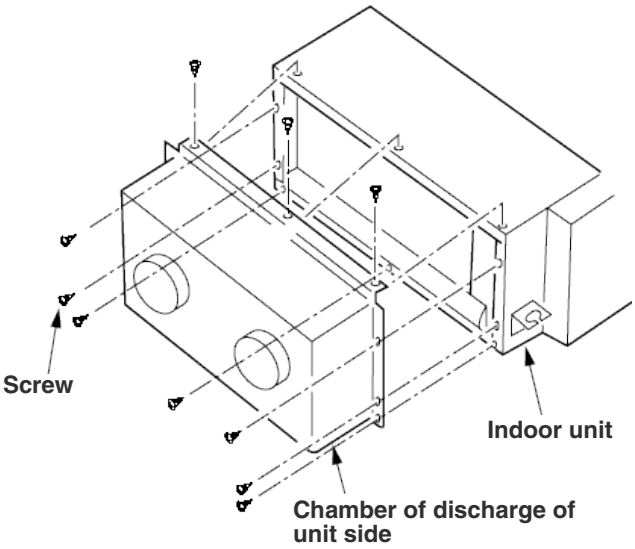

4. Installation of suspension bolt

- This is the same as for discharge/suction duct type. Follow instructions for discharge/suction duct type

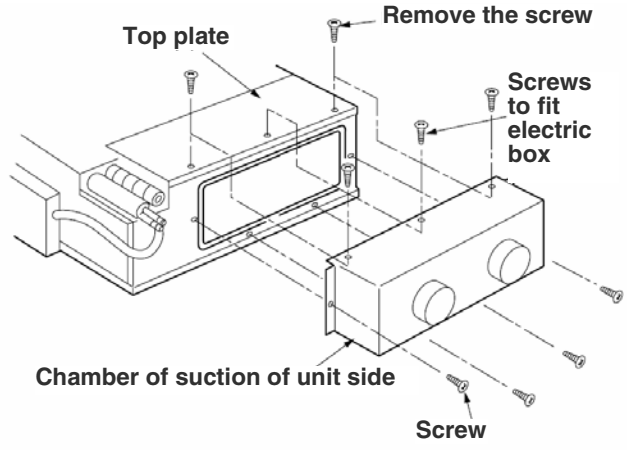

4. Preparation for installing indoor unit

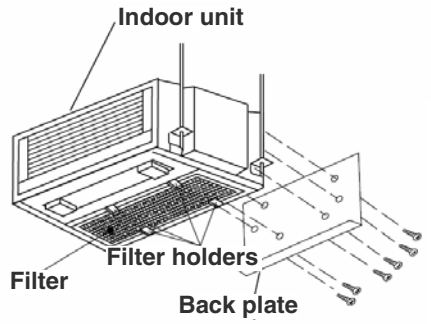

- Remove 1 screw by which electric box is installed, and then remove electric box
- Turn removed electric box with lead wires kept connected so that wire lead out section is positioned at the upper side, and hook the claw of electric box to side plate. Then fix the electric box to the bottom of the indoor unit using 1 screw.
- Install 4 suspension clamps at both sides of indoor unit, 2 clamps at each side, using 8 tapping screws. (Since size of left and right clamps are different for certain parts, refer to diagram on the bottom)
- Chamber of discharge of unit side on the indoor unit using 10 tapping screws.

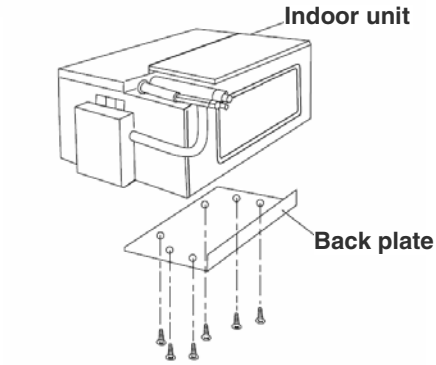

- Install bottom plates 1 and 2 on the bottom of the indoor unit using 9 tapping screws. (install bottom plate 1 first, followed by plate 2)
- Cut and open dotted line section for suction port at the back of the indoor unit, using nippers (2 locations)
- Remove 2 screws at top plate end of indoor unit and chamber of suction of unit side using 7 screws.

(1) Bottom side suction opening

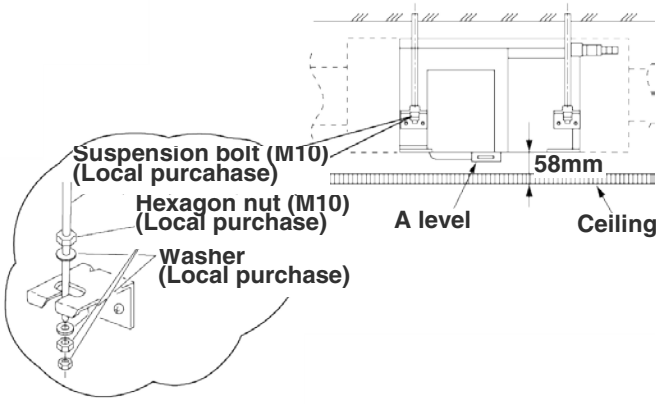

(2) Back side suction opening

5. Installation of indoor unit

Set nut and washer on suspension bolt and hook it to suspend clamp by lifting the indoor unit.

Make sure that indoor unit is kept level using a level or vinyl hose with water.

Fix the indoor unit so that the space between bottom surfaces of ceiling and indoor unit is 58mm.

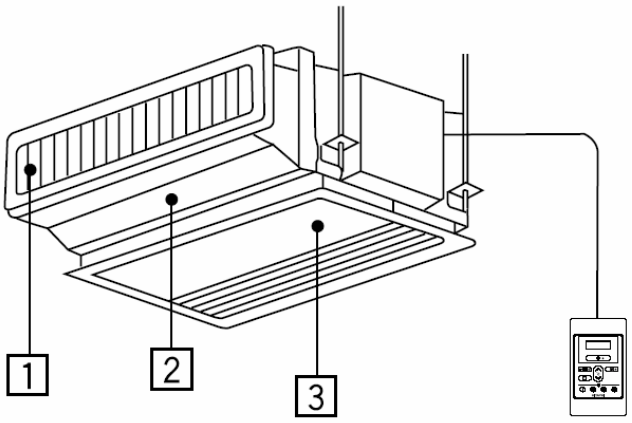

① CAUTION

- Be sure to install the indoor unit level. If the indoor unit is inclined, water may leak.
- If the space between bottom surfaces of indoor unit and ceiling is not correct, there may be a gap between the grille and ceiling surface, which will cause dripping of condensed water.

INSTALLATION OF NON DUCT TYPE

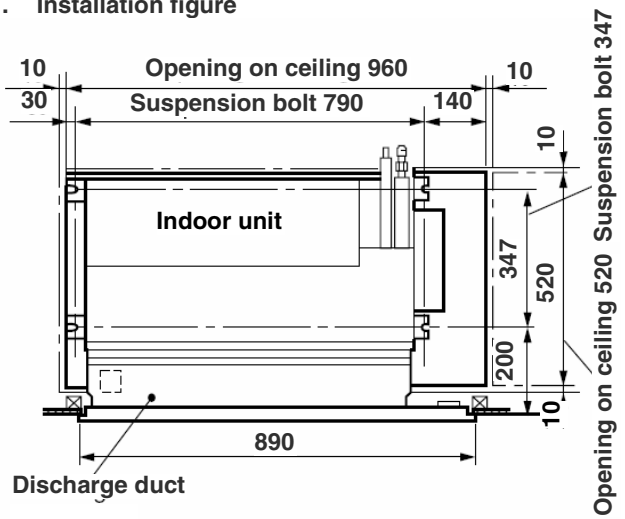

Non duct type

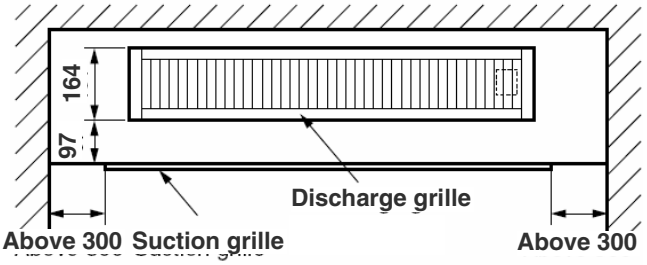

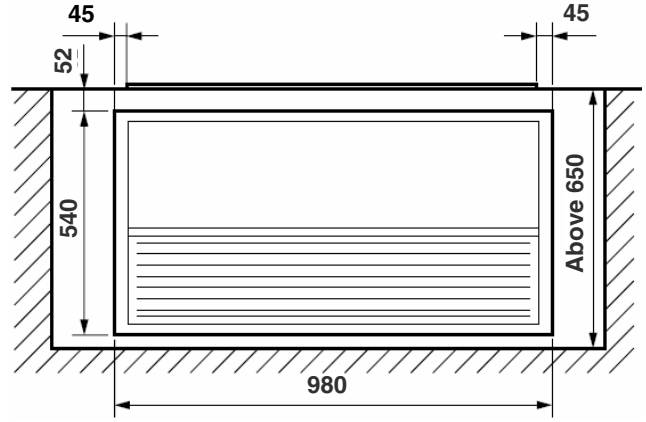

Need optional parts when install non duct type

①	Discharge grille
②	Discharge duct
③	Suction grille

1. Installation figure

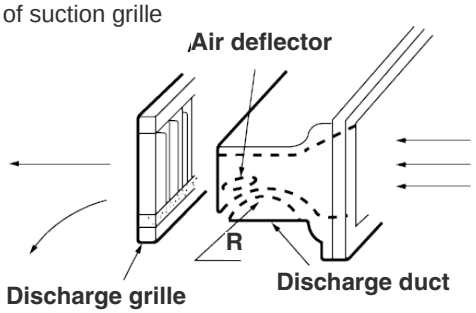

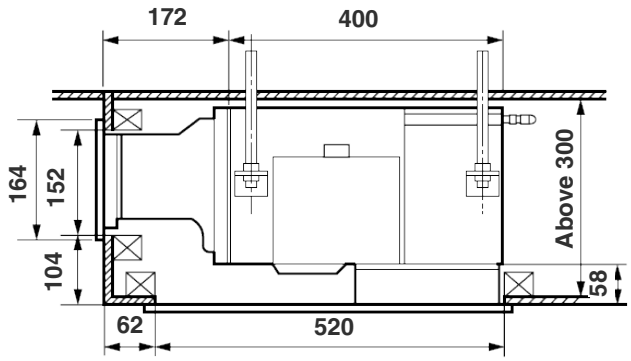

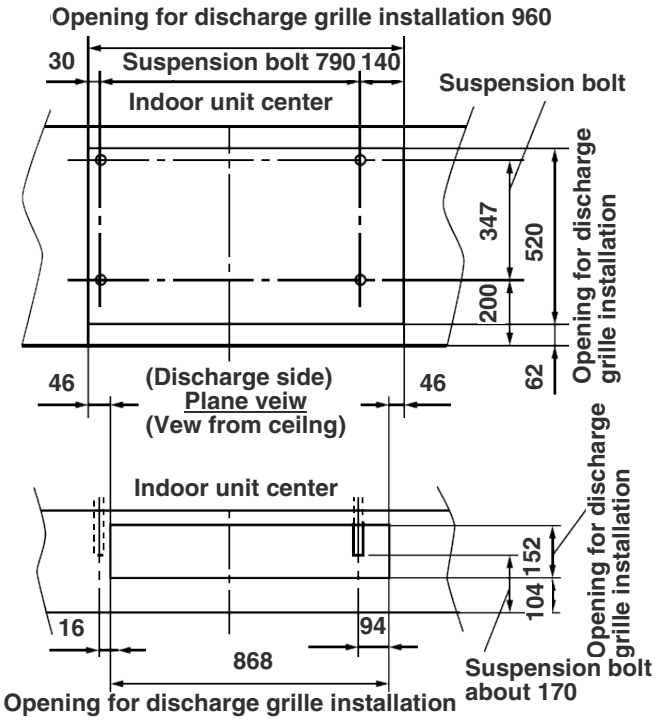

- Select the indoor unit position, fixing direction of air outlet so that cool/hot air reaches all the room.

- Do not allow any obstacle to block air flow within 1m of suction grille

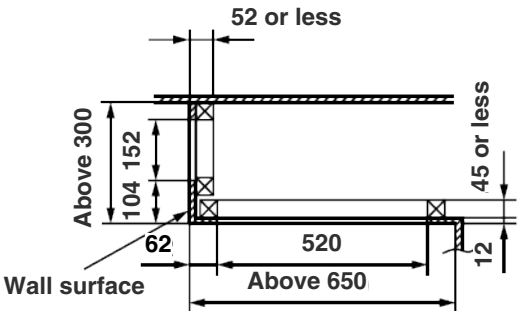

2. Opening on ceiling and suspension bolt position

Front view
(View from the front)

- Use M10 bolt for suspension bolt.
- Opening of ceiling and suspension bolt position are as shown on the left.
- Before installing the indoor unit, prepare opening 960mm x 520mm on ceiling, and 868mm x 152mm on wall and arrange drain pipe, refrigerant pipe and connecting cord in their installation positions.
- For finishing of opening on ceiling and wall, arrange with builder in detail.
- Be sure to reinforce furring of ceiling (frame: ceiling joist and joist supporter) to maintain level of ceiling and prevent vibration of ceiling plate.

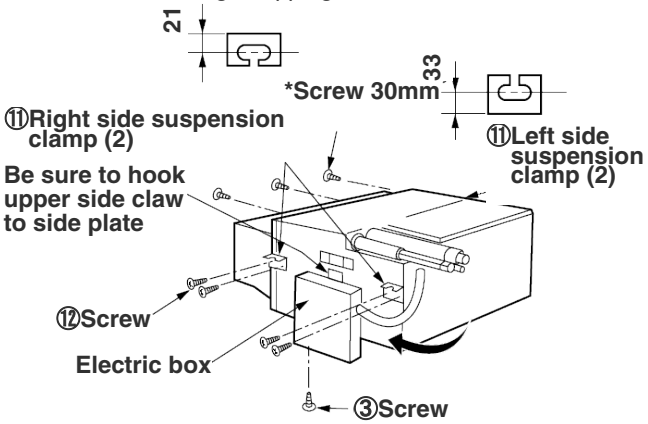

3. Installation of suspension bolt

- This is same as for discharge/suction duct type. Follow instructions for discharge/suction duct type

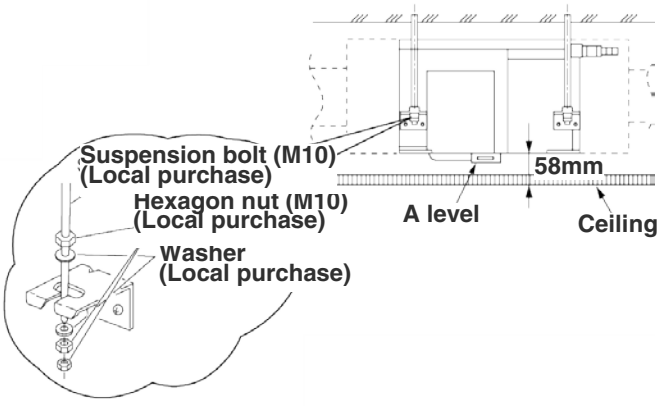

4. Preparation for installing indoor unit

- Remove 1 screw by which electric box is installed, and then remove electric box
- Turn removed electric box with lead wires kept connected so that wire lead out section is positioned at the upper side, and hook the claw of electric box to side plate. Then fix the electric box to the bottom of the indoor unit using 1 screw.
- Install 4 suspension clamps at both sides of indoor unit, 2 clamps at each side, using 8 tapping screws.
- Match discharge duct facing down (motor lead is set to left side) to discharge port of indoor unit and install using 6 tapping screws.

5. Installation of indoor unit

- Set nut and washer on suspension bolt and hook it to suspend clamp by lifting the indoor unit.
- Make sure that indoor unit is kept level using a level or vinyl hose with water.
- Fix the indoor unit so that the space between bottom surfaces of ceiling and indoor unit is 58mm.

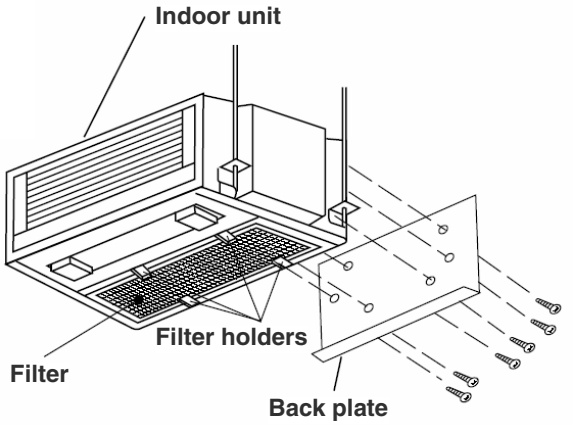

① CAUTION

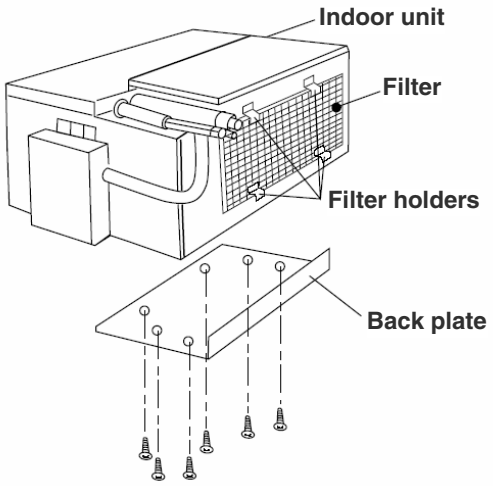

- Be sure to install the indoor unit level. If the indoor unit is inclined, water may leak.
- If the space between bottom surfaces of indoor unit and ceiling is not correct, there may be a gap between the grille and ceiling surface, which will cause dripping of condensed water.

6. Change of suction opening and filter position from bottom to back side

- Remove the filter at the bottom side of indoor unit by unscrew 8 screws at the filter holders (4 portions).
- Remove 6 screws at back plate of indoor unit.
- Then install the back plate at the bottom of indoor unit using 6 screws.
- Install filter at backside of indoor unit by fixing it with filter holders (4 portions) using 8 screws.

(1) Bottom side suction opening

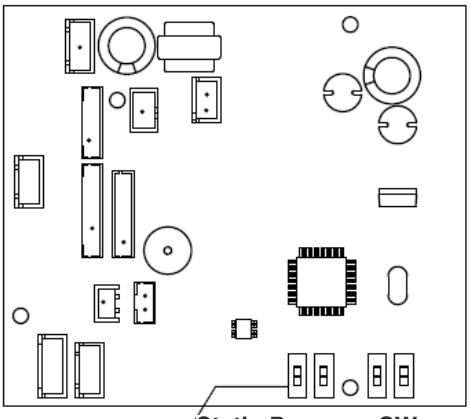

(2) Back side suction opening

Setting of switches

High static-pressure switch (Full duct type and semi duct type)

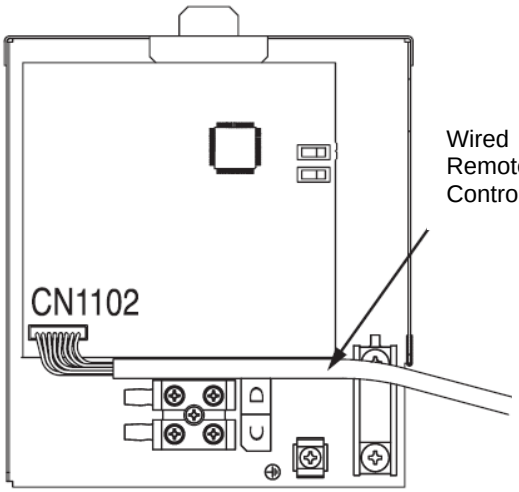

For full duct type and semi duct type, set the high static – pressure switch to HIGH STATIC-PRESSURE
If it is not set to HIGH STATIC-PRESSURE, there will be reduction of cooling and heating capacities. (At the time of delivery, the switch is set as “NORMAL”)

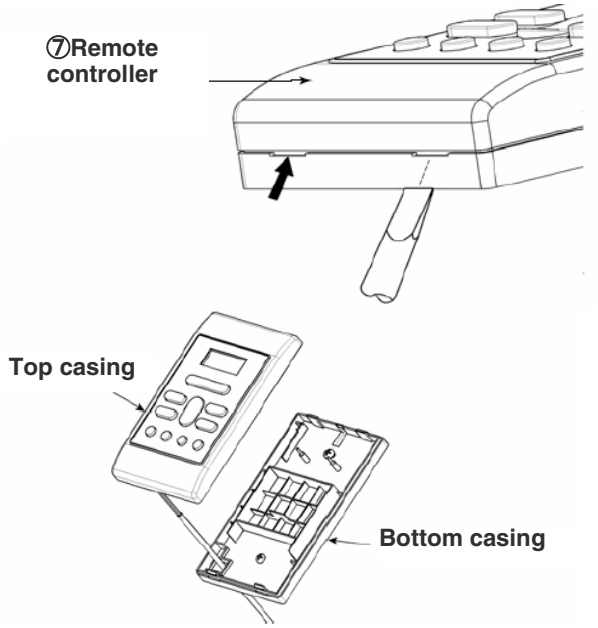

4. Installation of wired remote controller

a. Connection to the electrical box
- Remove the cover of electric box
- Connect the connector of wired remote controller to CN1102
- Assemble back the cover of electrical box

b. Wiring installation for wired remote controller (2 methods)
- Wired remote controller casing can be opened by pressing the slots with minus screw driver (see below diagram)

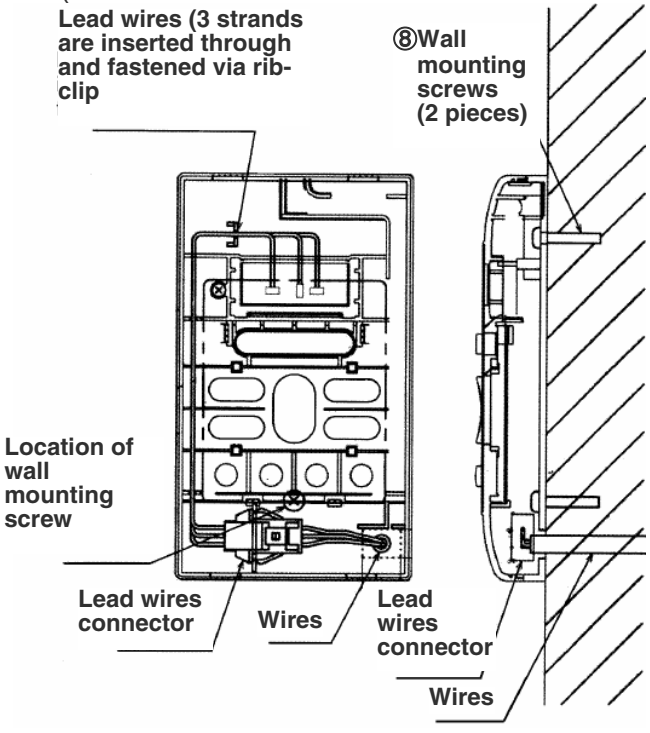

- Decide the fixing location of remote controller so that the length of wire shall be within 15 meters.

① CAUTION

- Do not cut the provided wire. Excess wire should be properly wound and fitted at safe place
- Do not join the wire with additional wire.
- When connecting the wires via the wall's recessed slot:

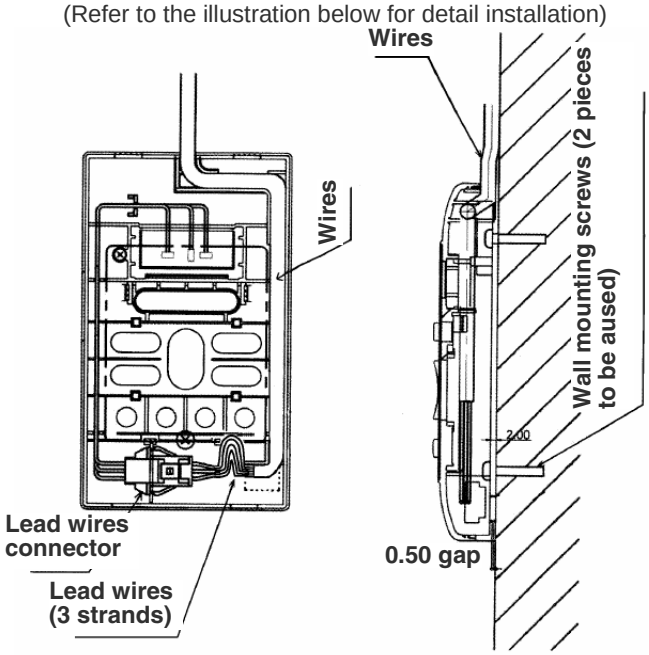

1. Fix the bottom casing to the wall by the provided screw
2. Assemble the top casing to the fixed bottom casing. (Refer to the illustration below for detail installation

- When the wires to be connected from inside top portion of top casing;

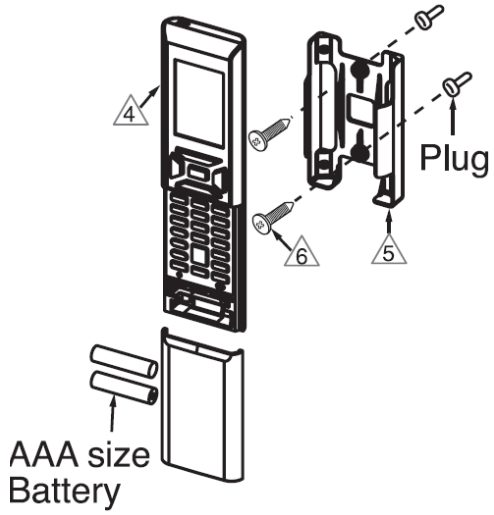

1. Break off a perforated aperture located at the top portion of the bottom casing by nipper. Remove sharp edges around the aperture by cutter.
2. Fix the bottom casing to the wall by the screw provided.
3. Connect the wires to the lead wires connector.
4. Mount the wires through the provided slot on top casing.

5. Assemble the top casing to the fixed bottom casing. (Refer to the illustration below for detail installation)

3. Installation of wireless remote controller (optional))

- The remote controller can be placed in its holder which is fixed on wall or beam
- To operate the remote controller at its holder, please ensure that the unit can receive signal transmitted from the controller at the place where the holder is to be fixed. The unit will beep when signal is received from the remote controller. The signal transmission is weakening by fluorescent light. Therefore, during the installation of the remote control holder, please switch on the light, even during day time, to determine the mounting location of the holder.

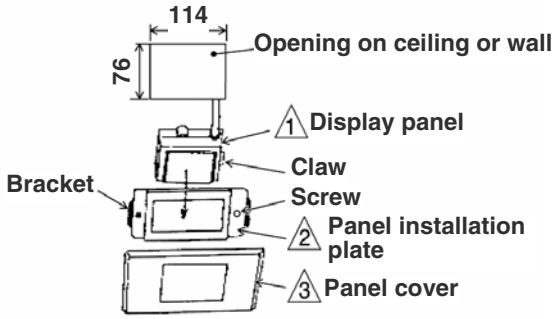

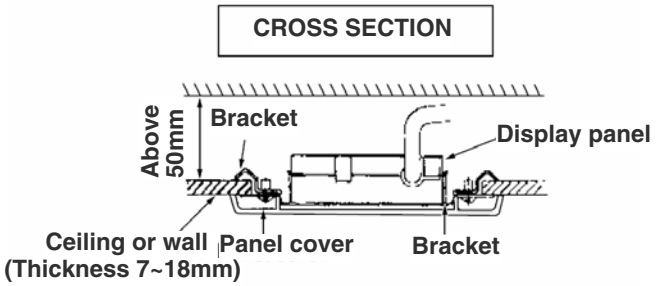

Installation of display panel (Optional)

- Select an installation position on ceiling or wall where there is no obstacle to interrupt signal reception.
- Loosen screws of panel installation plate so that bracket can be slightly moved.
- Match brackets to the opening on ceiling or wall and tighten screws until bracket is firmly secured to ceiling material.
- Install the panel cover so inside claws are securely hooked to the panel installation plate
- Conduct the indoor unit side housing of display panel cord to the electric box of the indoor unit an connect it with the housing at the side of the unit.

① CAUTION

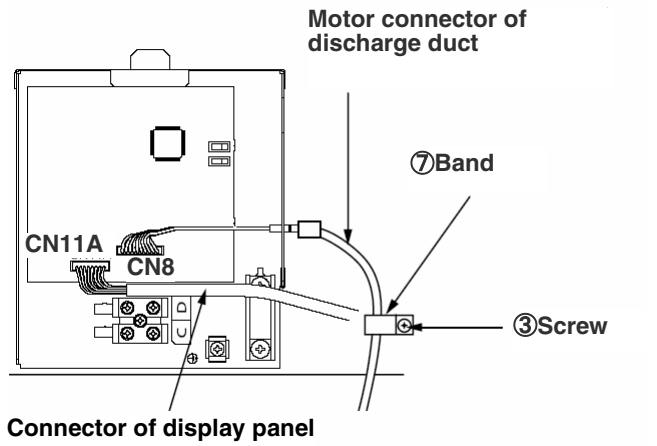

- Please disconnect wired remote controller connector at CN18 if to use wireless remote controller.

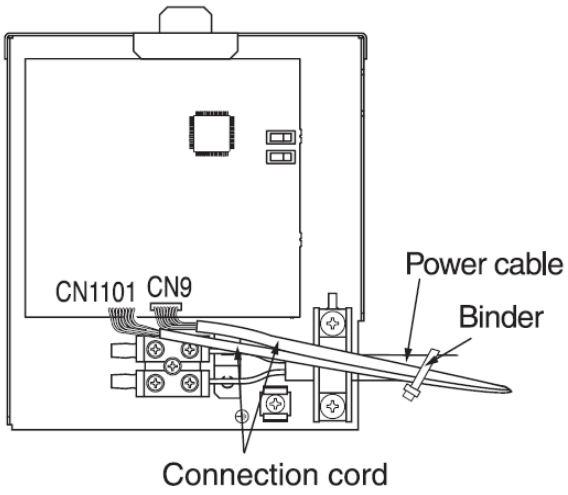

Connetion of discharge duct and display panel lead wires (Optional)

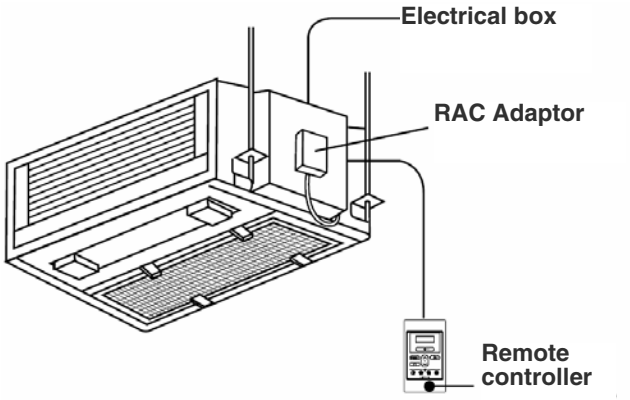

- Connect the motor connector of discharge duct to the connector CN8 (see diagram below)
- Attach connector of this panel of the connector CN11A on the control PWB>
- Be sure to fix the motor lead wire of discharge duct (if applicable) using fixing band (For full duct type an semi duct type connect only display panel

4. When connecting the H-Link

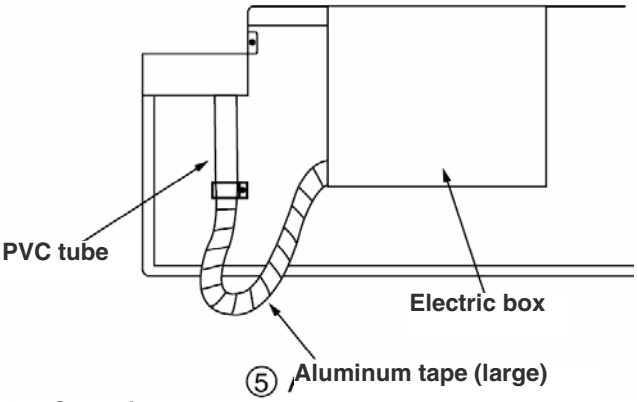

- When connecting to H-link, a separately purchased RAC adaptor is required.
- TO install the wiring, the electrical box cover must be opened, (for the RAC adaptor connect to CN1101)
- The connection cord and power cables are to be arranged and tied up as per the diagram as shown below.
- Please refer to the respective user manuals of the RAC adaptor for further details.
- Please refer to the user manual for instructions on the removal and installation of the electrical box.

5. Protection of lead wire

- Wrap aluminum tape around PVC tube between electric box and indoor unit (cord band).

6. Operation test

- Please ensure that the air conditioners in normal operating condition during the operation test.
- Explain to your customer the proper operation procedures as described in the user manual.
- If the indoor unit does not operate, check to see that the connections are correct.

① CAUTION

- Trial run should be conducted on one unit at a time to check for incorrect wiring of connecting cord.

10.1.6 INSTALLATION OF MIDDLE STATIC PRESSURE DUCT TYPE INDOOR

Please read the safety precautions carefully before operating the unit. The contents of this section are vital to ensure safety. Please pay special attention to the following signs.

⚠WARNING Incorrect methods of installation may cause death or serious injury

⚠CAUTION Improper installation may result in serious consequences.

Make sure to connect earth wire

This sign indicates prohibition

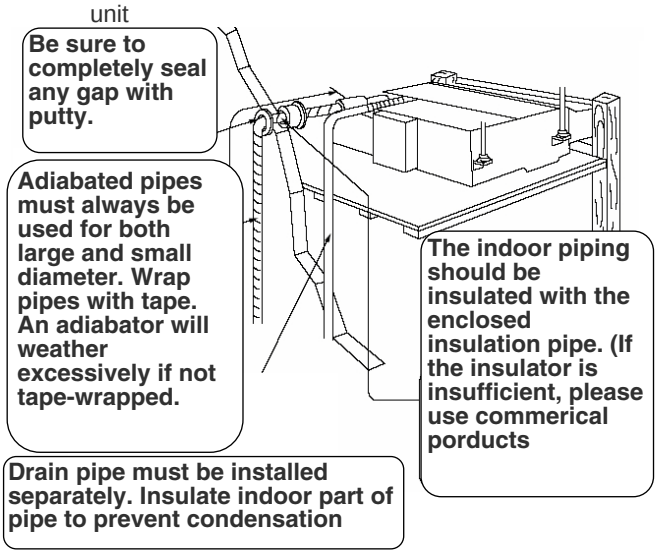

Be sure that the unit operates in proper condition after installation. Explain to customer the proper way of operating the unit as described in the user's guide.

⚠ WARNING

- Please request your sales agent or qualified technician to install your unit. Water leakage, short circuit of fire may occur if you do the installation work yourself.
- Please observe the instructions stated in the installation manual during the process of installation. Improper installation may cause water leakage, electric shock and fire.
- Make sure that the units are mounted at locations which are able to provide full support of the weight of the units. If not, the units may collapse and impose danger.
- Observe the rules and regulations of the electrical installation and the methods described in the installation manual when dealing with the electrical work. Use power cables approved by the authorities of your country.
- Be sure to use the specified wire for connecting the indoor and outdoor units. Please ensure that the connections are tight after the conductors of the wire are inserted into the terminals. Improper insertion and loose contact may cause over-heating and fire.
- Please use the specified piping set for the correct refrigerant gas. Otherwise, this may result in broken copper pipes or faults
- When installing or removing an air conditioner, don not allow air or moisture to remain in the refrigeration cycle. Otherwise, pressure in the refrigeration cycle may become abnormally high may cause a rupture.
- Be sure to ventilate fully in case refrigerant gas leaks while at work. If the refrigerant gas comes into contact with fire, poisonous gas might be discharged.
- After completion of installation work, check to make sure that there is no refrigeration gas leakage. If the refrigerant gas leaks into the room, coming into contact with fire in a fan-driver heater, space heater, etc; poisonous gas may be emitted.
- Unauthorized modifications to the air conditioner may be dangerous. If a breakdown occurs, please contact a qualified air conditioner technical or electrician. Improper repairs may result in water leakage, electric shock and fire.
- Be sure to connect the earth wire from power supply wire to the outdoor unit and between the outdoor and indoor unit. Improper grounding may cause electric shock.

⚠ CAUTION

- A circuit breaker or fuse must be installed. Without a circuit breaker or fuse, the danger of electric shock exists. A main switch with a contact gap of more than 3.5mm has to be installed in the power supply line to the outdoor unit.
- Do not install the unit near a location where there is a flammable gas. The indoor unit may catch fire if flammable gas leaks around it.
- Be sure to tighten the flare nut to the specified torque using a toque wrench. If the flare nut is tightened excessively, it may crack as time elapses, causing the refrigerant leakage.
- Please ensure smooth flow of water when installing the drain hose.
- Piping shall be suitable supported with a maximum spacing of 1m between supports
- An IEC approved power cord should be used. Power cord type: NYM.
- "Height difference" and "Piping length" of Indoor and Outdoor unit differs depending on the Outdoor unit. Please refer to the "Installation manual" in Outdoor unit

Proper place for Installation

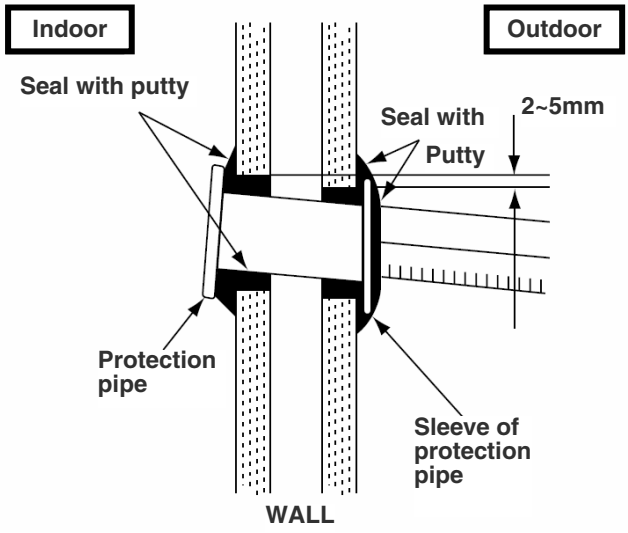

Indoor unit

Refrigerating pipes can be drawn from the back, the under the left side of the indoor unit. In the case that refrigerating pipes are drawn form the left side, confirm the smooth flowing of condensed water. If not, the condensed water will overflow into the room. When the pipes are drawn from the right or left side, the pipes can be connected easily by configuration the pipes before installation.

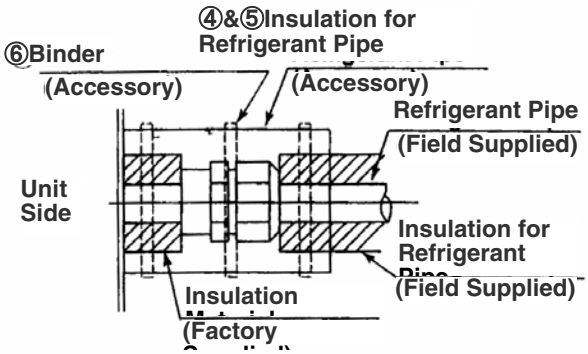

Installation procedure and notice

Especially, the selection of installation place need great care for the split type air conditioner, because it is very difficult to move from place to place after the first installation.

1. Make a hole on the wall such that the place as shown in figure in order to keep the flow of condensed water smooth.

2. Hole on wall should be made with some inclination as above for keeping the smooth flow of condensed water.
3. Connecting pipe installation
   - Seal the end of pipes to prevent from moisture and water

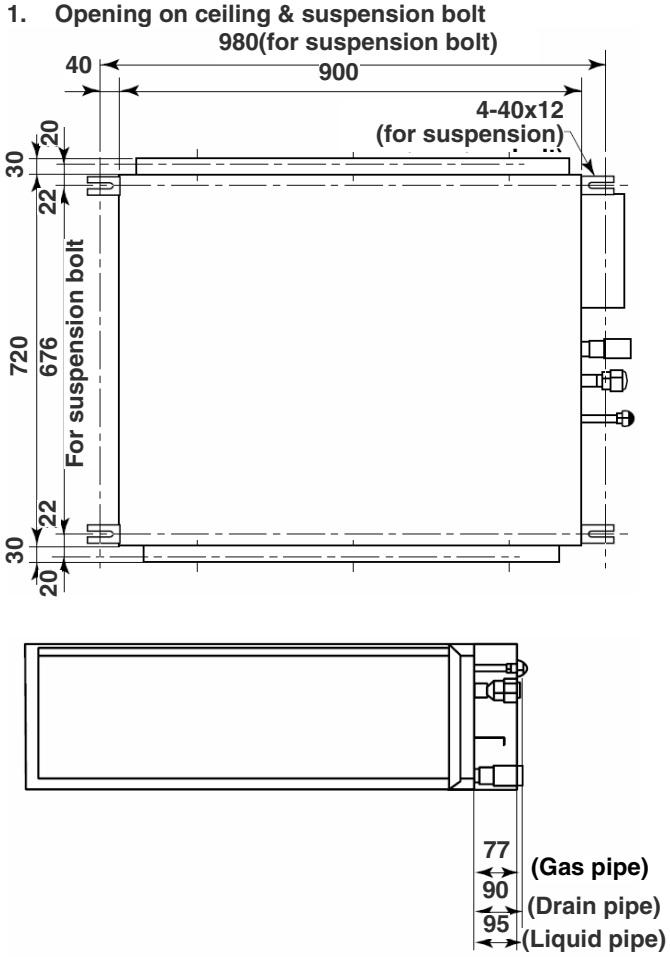

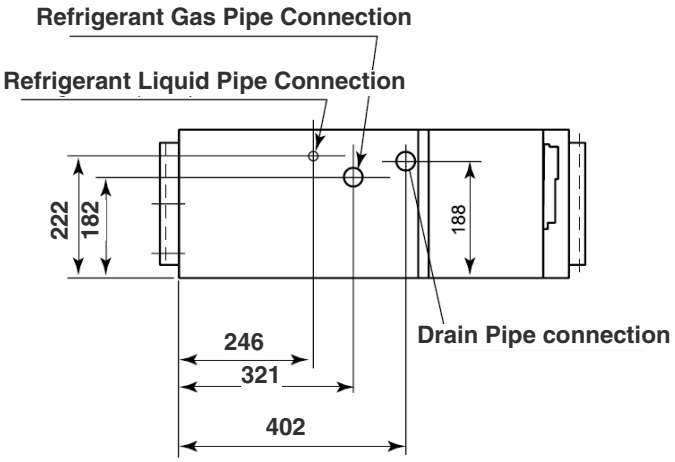

① CAUTION

The rubber strap used for fixing the insulator should not be tied with great force. Otherwise, this will damage the heat insulation and causes water condensation.

1. **Opening on ceiling & suspension bolt**

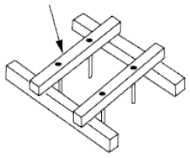

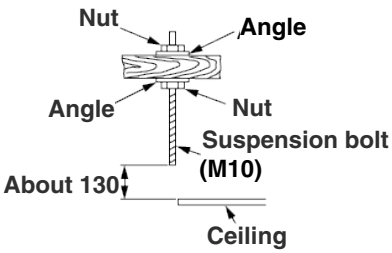

- Need a connecting work for refrigerant pipe, drain pipe and F cable in the ceiling after suspending the indoor unit. Arrange drain pipe, refrigerant pipe and F cable in their installation position.
- For finishing of opening on ceiling, arrange with builder in detail
- If ceiling is already completed, connecting cables between indoor and outdoor, piping and drain piping must be done before fitting the indoor unit.

2. **Preparation for installing the indoor unit**
   - Be sure to reinforce
   - Be sure to reinforce furring of ceiling (frame: ceiling joint and supporter) to maintain level of ceiling and prevent vibration of ceiling plate.
   - Suspension bolts should be purchased in the field
   - Refer to diagrams shown below or length of suspension bolts.

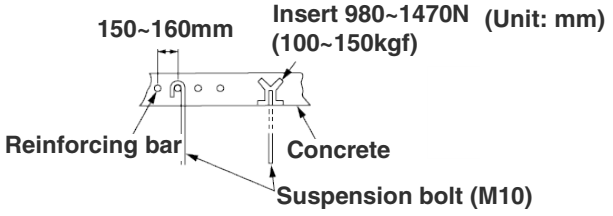

- **In case of wooden frame**

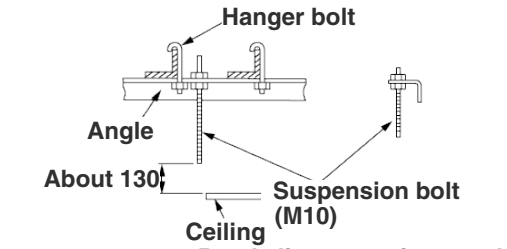

60~90mm square piece of lumber

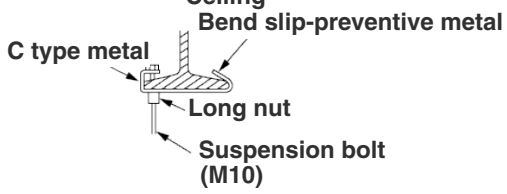

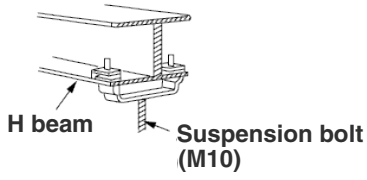

- **In case of steel frame**

3. Installation of the Indoor Unit

a) Mark the positions of the sling bolts, refrigerant piping connections and drain connection.

b) Ceiling work: If basically varies according to the building structure. Consult with the architect or interior finish worker for more information on this.

i) To maintain the appropriate levelness of the ceiling and preventing from the vibration, the additional reinforcement in the ground of ceiling (building frame) is essential.

ii) Provide a space for the air inlet grille, air outlet grille and maintenance work

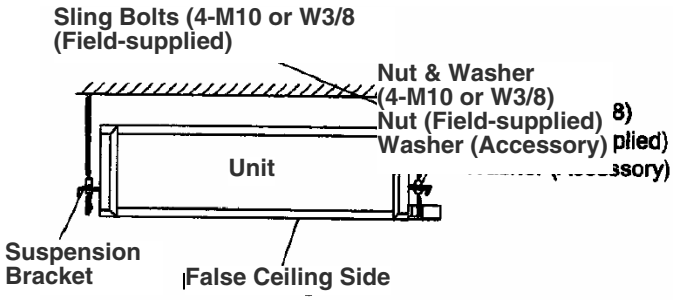

iii) Do not suspend bolts on the indoor units. If connected, the light may flicker or the light unit may be rattled by vibration of the indoor units.

c) Mounting and Hanging the Indoor unit

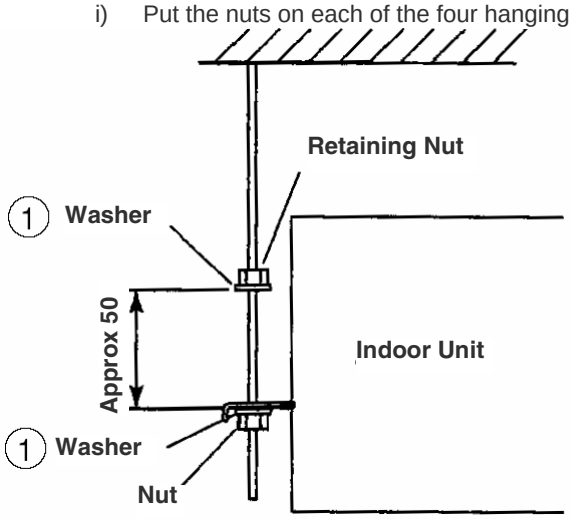

Field Supplied parts

Sling Bolts 4-M10 or W3/8

Nut 8-M10 or W3/8

i) Put the nuts on each of the four hanging bolts

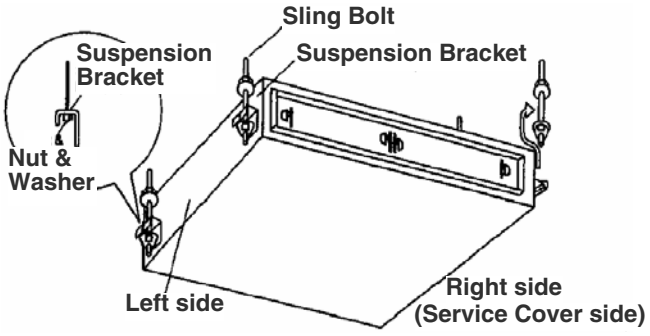

d) Hanging the Indoor Unit

i) Hook the suspension bracket to the nut and washer of each hanging bolt, as shown starting at the opposite side to service cover side.

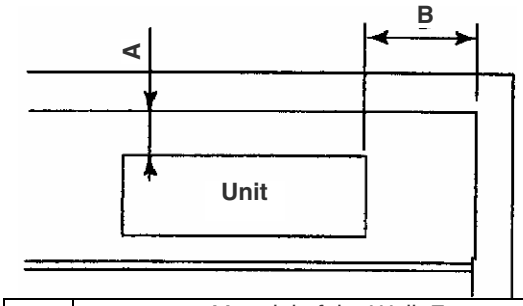

ii) After checking that the nut and washer are correctly fixed by the retainers of the suspension bracket, hook the suspension bracket of the service cover side to the nut and washer. (Put the sling bolts away from the unit when hooking.)

iii) Piping and wiring work will be required in the ceiling after hanging the unit. Therefore, determine the drawing direction of pipe after piping and wiring work should be carried out up to the connecting positions before hanging the unit.

e) For reasons of the disaster prevention, the distance between under the roof and wall surface should be followed as shown in the figure below.

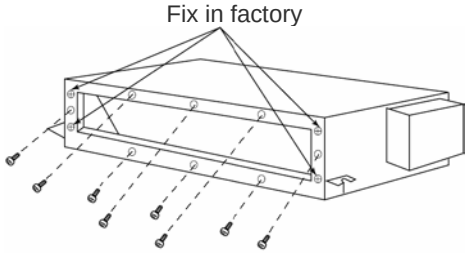

- Use a non-flammable material for the duct.

	Material of the Wall, Frame	
	Flammable	Non-flammable
A	Min 100cm	Min 10cm
B	Min 60cm	Min 5cm

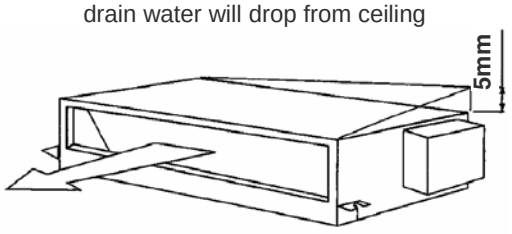

f) If decided to keep the flange at discharge side, fix screw ② at 8 positions. However, if decided not to keep the flange, remove 4 screws that fixed to the flange.

Fix in factory

g) Adjusting of the Unit Level

i) Check to ensure that the foundation is flat, taking into account the maximum foundation gradient. If not, it will cause malfunction of float switch or no operation. Subsequently, drain water will drop from ceiling

ii) The unit should be installed so that the rear side of the unit is slightly (0mm to 5mm) lower than the fronts side, in order to prevent incorrect positioning of the drain discharge.

iii) Tighten the bolts of the sling nuts with the suspension brackets after adjustment is completed. Special plastic paint must be applied to the bolts in order to prevent them from loosening. Keep the unit as well as relevant equipment covered with vinyl

h) Connecting Return Duct and Supply Duct

i) The return duct should be connected with the indoor through canvas ducts between inlet side of the indoor unit and ceiling of the room. The supply duct should be connected with the indoor unit through canvas ducts. In order to avoid abnormal sound vibration. The unit is equipped with a pre-drilled duct flange for the return and supply duct connection.

ii) Attach the vibration proof rubber to Sling bolt in order to avoid abnormal sound vibration.

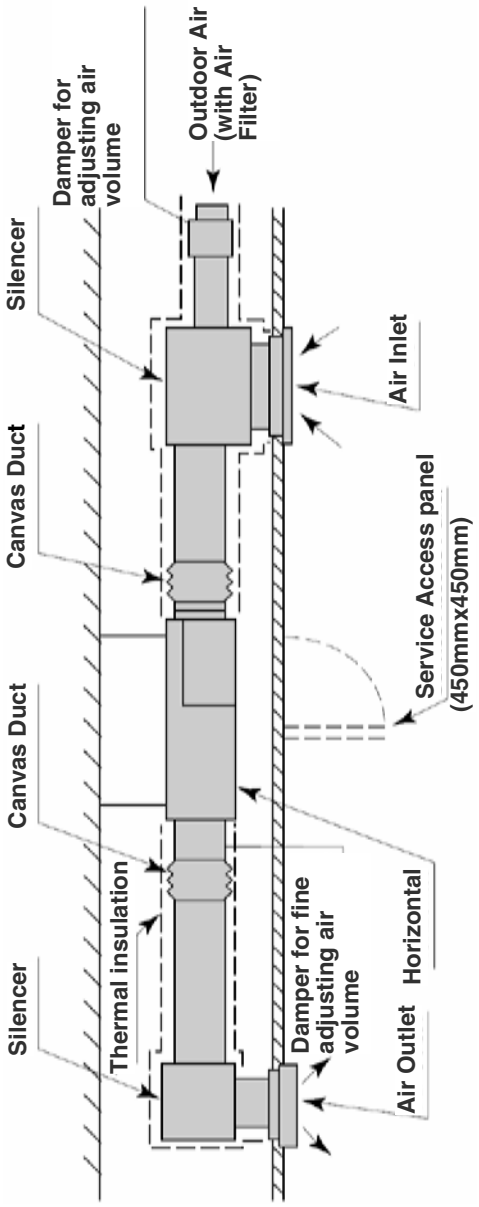

iii) Natural frequency is 9 to 21Hz

iv) Duct material should be non-inflammable material.

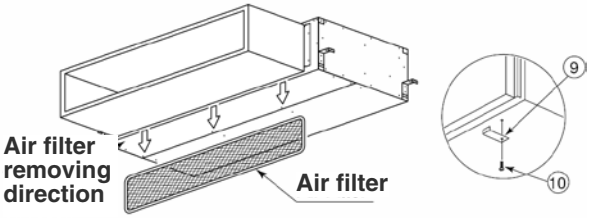

v) Perform the heat insulation work over the duct and the duct flange for dew protection.

① CAUTION

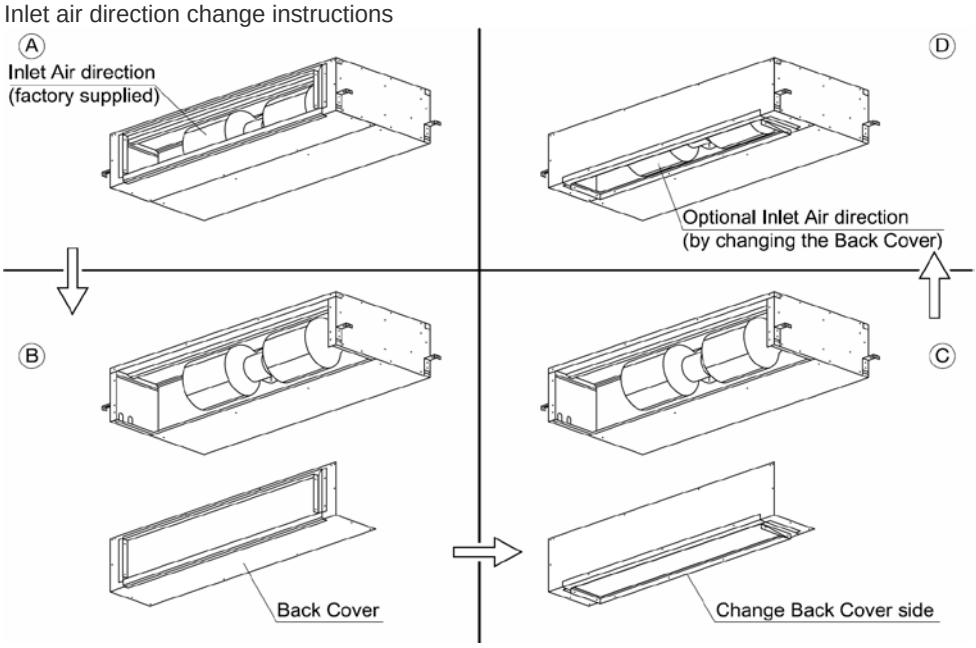

- If a lower sound level is further required, install silencer (field-supplied)
- The facility design should be “Unit External Static Pressure = Duct Pressure Loss Suction / Discharge Loss”. If the duct pressure loss becomes under to the unit external static pressure, air speed will get larger and lead to the occurrence of loud noise, splashing water and the trigger of motor protection mechanism. If the unit external static pressure becomes under to the duct pressure loss, some problems such as inability to change the air speed may occur. Set the air flow control damper or shift the static pressure control switch to adjust to get almost equal level between the external static pressure and the duct pressure loss. (See “Setting of External Pressure” section for the details)
- Basically this unit is designed to install the ducts on the inlet side and the outlet side. Ask for more information for using the return ducts in the ceiling.

- Select the indoor unit position, fixing direction of air outlet so that cool/hot air reaches all the room. Standard position of the indoor unit is with the wall side on the ceiling.
- Remove the factory fitted filter and filter holders before installing of full duct type.

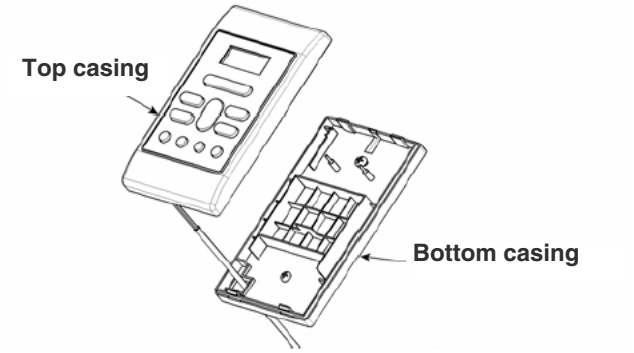

Inlet air direction change instructions

5. Installation of wired remote controller

a. Connection to the electrical box
- Remove the cover of electric box
- Connect the connector of wired remote controller to CN1102.
- Assemble back the cover of electrical box

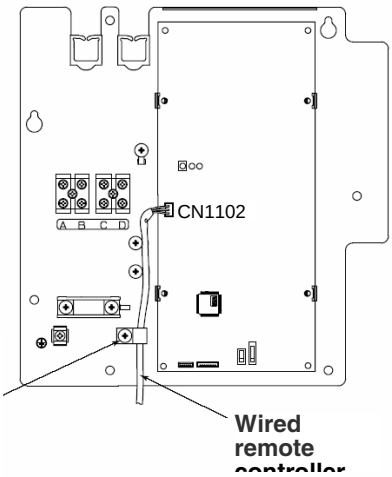

b. Wiring installation for wired remote controller (2 methods)
- Wired remote controller casing can be opened by pressing the slots with minus screw driver (see below diagram)

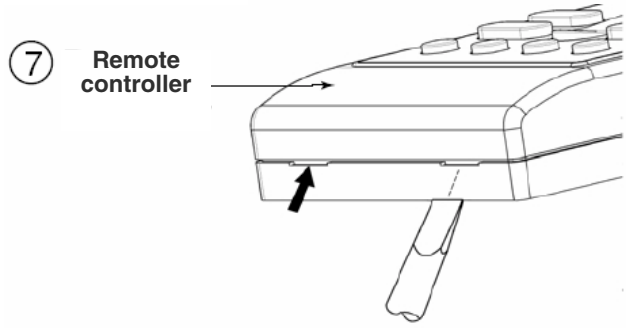

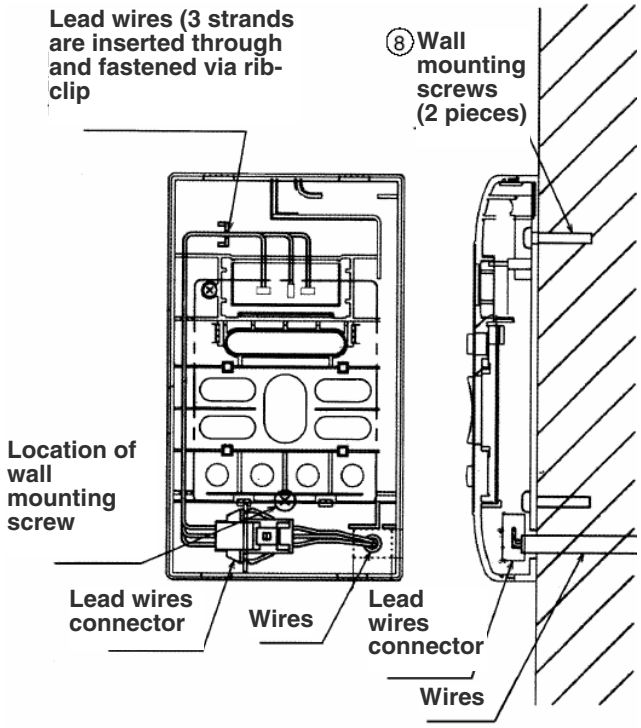

- Decide the fixing location of remote controller so that the length of wire shall be within 15 meters.

⚠ CAUTION
- Do not cut the provided wire. Excess wire should be properly wound and fitted at safe place
- Do not join the wire with additional wire.
- When connecting the wires via the wall's recessed slot:

7. Fix the bottom casing to the wall by the provided screw
8. Assemble the top casing to the fixed bottom casing. (Refer to the illustration below for detail installation

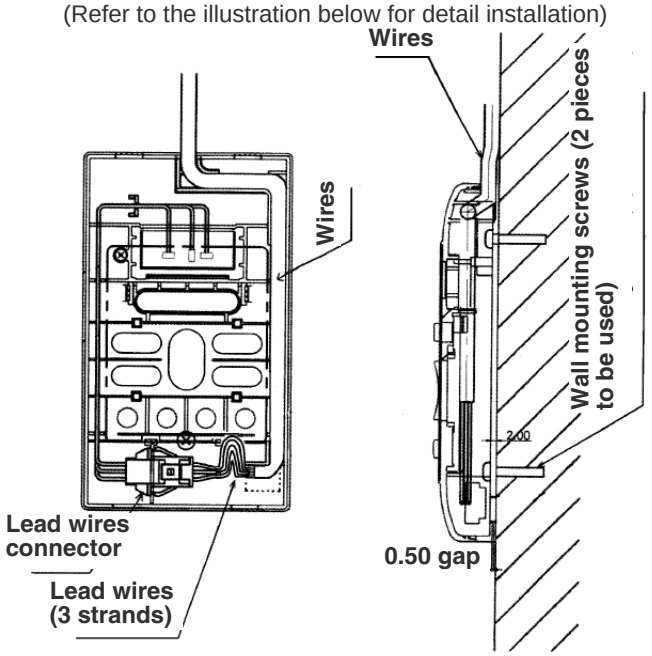

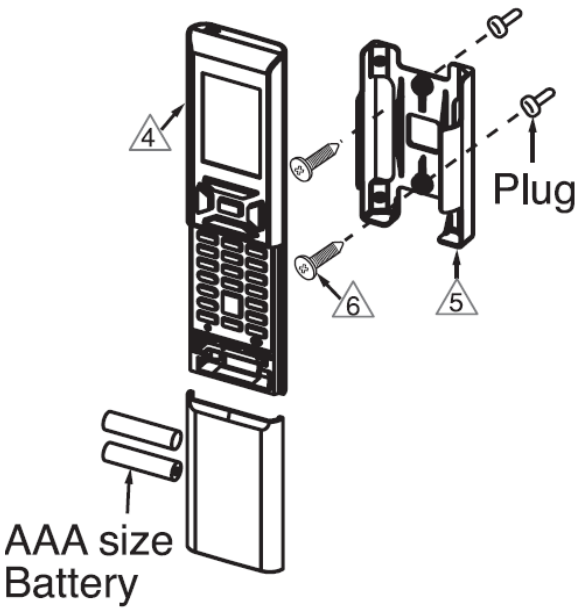

- When the wires to be connected from inside top portion of top casing;

1. Break off a perforated aperture located at the top portion of the bottom casing by nipper. Remove sharp edges around the aperture by cutter.
2. Fix the bottom casing to the wall by the screw provided.
3. Connect the wires to the lead wires connector.
4. Mount the wires through the provided slot on top casing.
5. Assemble the top casing to the fixed bottom casing. (Refer to the illustration below for detail installation)

9. Installation of wireless remote controller (optional))

- The remote controller can be placed in its holder which is fixed on wall or beam
- To operate the remote controller at its holder, please ensure that the unit can receive signal transmitted from the controller at the place where the holder is to be fixed. The unit will beep when signal is received from the remote controller. The signal transmission is weakening by fluorescent light. Therefore, during the installation of the remote control holder, please switch on the light, even during day time, to determine the mounting location of the holder.

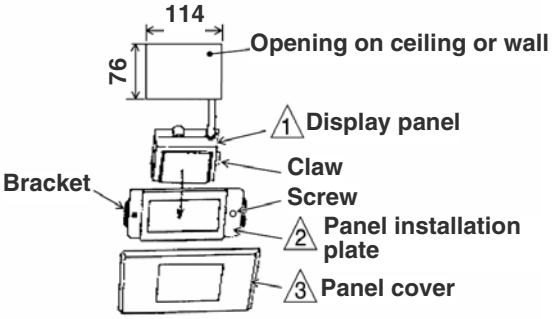

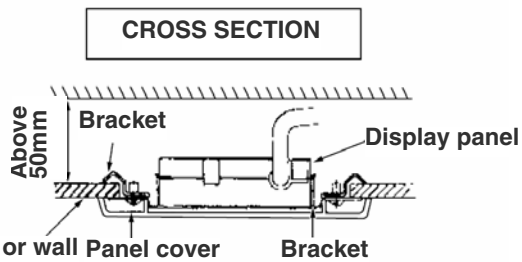

Installation of display panel (Optional)

- Select an installation position on ceiling or wall where there is no obstacle to interrupt signal reception.
- Loosen screws of panel installation plate so that bracket can be slightly moved.
- Match brackets to the opening on ceiling or wall and tighten screws until bracket is firmly secured to ceiling material.
- Install the panel cover so inside claws are securely hooked to the panel installation plate
- Conduct the indoor unit side housing of display panel cord to the electric box of the indoor unit an connect it with the housing at the side of the unit.

① CAUTION

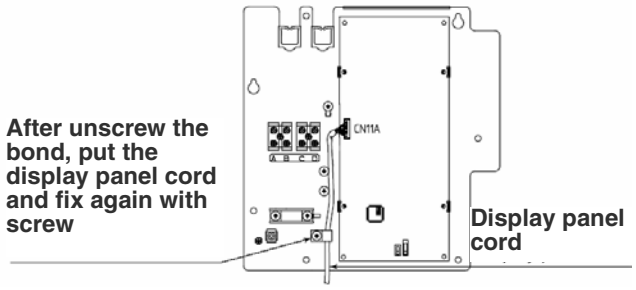

- Please disconnect wired remote controller connector at CN18 if to use wireless remote controller.

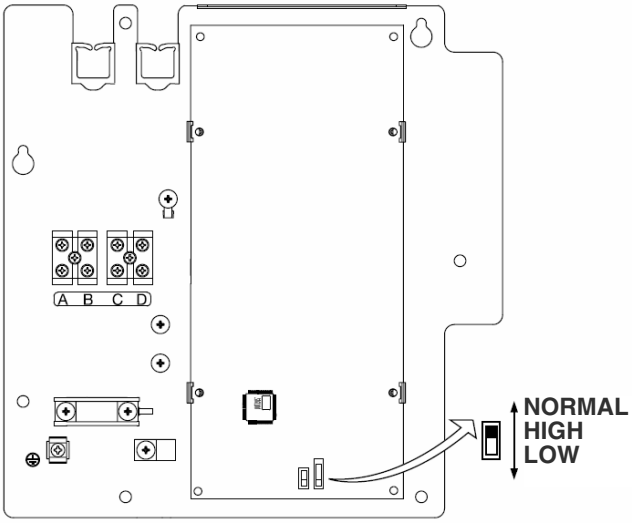

Connetion of discharge duct and display panel lead wires (Optional)

- Connect the motor connector of discharge duct to the connector CN8 (see diagram below)
- Attach connector of this panel of the connector CN11A on the control PWB>

10. Setting of external static-pressure switch

- Remove lid of electric box and set the "STATIC PRESSURE" switch.

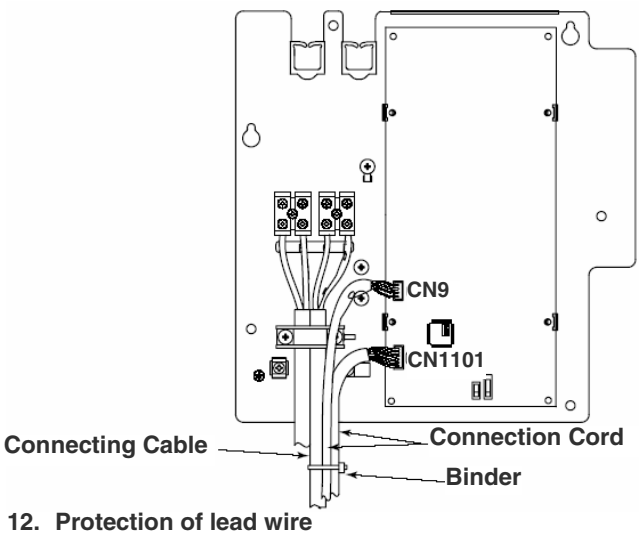

HIGH : 80Pa
NORMAL : 50Pa
LOW : 30Pa

- If not set to HIGH STATIC-PRESSURE, there will be reduction of cooling and heating capacities. (At the time of delivery, the switch is set to "NORMAL")

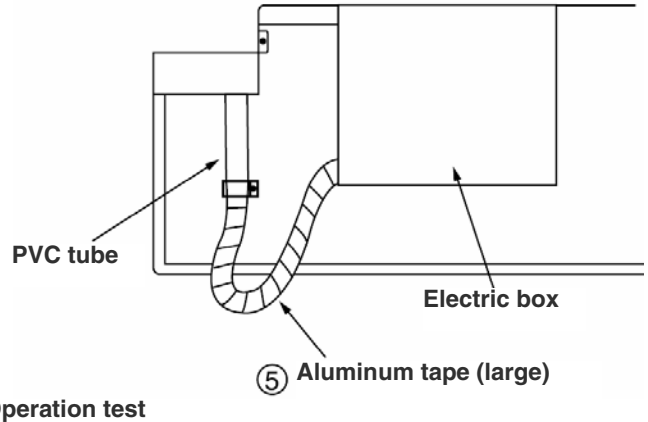

11. When connecting the H-Link

- When connecting to H-link, a separately purchased RAC adaptor is required.
- To install the wiring, the electrical box cover must be opened.
- Connect the RAC adaptor to CN1101.
- The connection cord and power cables are to be arranged and tied up as per the diagram as shown below.
- Please refer to the respective user manuals of the RAC adaptor, for further details.

12. Protection of lead wire

- Wrap aluminum tape around PVC tube between electric box and indoor unit (cord band).

13. Operation test

- Please ensure that the air conditioners in normal operating condition during the operation test.
- Explain to your customer the proper operation procedures as described in the user manual.
- If the indoor unit does not operate, check to see that the connections are correct.

⚠ CAUTION

- Trial run should be conducted on one unit at a time to check for incorrect wiring of connecting cord.

10.2 INSTALLATION OF OUTDOOR UNIT

10.2.1. SINGLE SPLIT AND MULTI TYPE OUTDOOR

Please read the safety precautions carefully before operating the unit. The contents of this section are vital to ensure safety. Please pay special attention to the following signs.

⚠WARNING Incorrect methods of installation may cause death or serious injury

⚠CAUTION Improper installation may result in serious consequences.

Make sure to connect earth wire

This sign indicates prohibition

Be sure that the unit operates in proper condition after installation. Explain to customer the proper way of operating the unit as described in the user's guide.

⚠ WARNING

- Please request your sales agent or qualified technician to install your unit. Water leakage, short circuit of fire may occur if you do the installation work yourself.
- Please observe the instructions stated in the installation manual during the process of installation. Improper installation may cause water leakage, electric shock and fire.
- Make sure that the units are mounted at locations which are able to provide full support of the weight of the units. If not, the units may collapse and impose danger.
- Observe the rules and regulations of the electrical installation and the methods described in the installation manual when dealing with the electrical work. Use power cables approved by the authorities of your country.
- Be sure to use the specified wire for connecting the indoor and outdoor units. Please ensure that the connections are tight after the conductors of the wire are inserted into the terminals. Improper insertion and loose contact may cause over-heating and fire.
- Please use the specified piping set for the correct refrigerant gas. Otherwise, this may result in broken copper pipes or faults
- When installing or removing an air conditioner, don not allow air or moisture to remain in the refrigeration cycle. Otherwise, pressure in the refrigeration cycle may become abnormally high may cause a rupture.
- Be sure to ventilate fully in case refrigerant gas leaks while at work. If the refrigerant gas comes into contact with fire, poisonous gas might be discharged.
- After completion of installation work, check to make sure that there is no refrigeration gas leakage. If the refrigerant gas leaks into the room, coming into contact with fire in a fan-driver heater, space heater, etc; poisonous gas may be emitted.
- Unauthorized modifications to the air conditioner may be dangerous. If a breakdown occurs, please contact a qualified air conditioner technical or electrician. Improper repairs may result in water leakage, electric shock and fire.
- Be sure to connect the earth wire from power supply wire to the outdoor unit and between the outdoor and indoor unit. Improper grounding may cause electric shock.

⚠ CAUTION

- A circuit breaker or fuse must be installed. Without a circuit breaker or fuse, the danger of electric shock exists. A main switch with a contact gap of more than 3.5mm has to be installed in the power supply line to the outdoor unit.
- Do not install the unit near a location where there is a flammable gas. The indoor unit may catch fire if flammable gas leaks around it.
- Be sure to tighten the flare nut to the specified torque using a toque wrench. If the flare nut is tightened excessively, it may crack as time elapses, causing the refrigerant leakage.
- Please ensure smooth flow of water when installing the drain hose.
- Piping shall be suitable supported with a maximum spacing of 1m between supports
- An IEC approved power cord should be used. Power cord type: NYM.

The choice of mounting site

- **OUTDOOR UNIT**

⚠WARNING

- The Outdoor unit must be mounted at a location which can support heavy weight. Otherwise, noise and vibration will increase.

⚠CAUTION

- Do not expose the unit under direct sunshine or rain. Besides, ventilation must be good and clear of obstruction.
- The air blown out of the unit should not pint directly to animals or plants.
- The clearances of the unit from top, left, right and front are specified in figure below. At least 3 of the above sides must be open air.
- Be sure that the hot air blown out of the unit and noise do not disturb the neighborhood.
- Do not install at a location where there is flammable gas, steam, oil and smoke.
- The location must be convenient for water drainage.
- Place the Outdoor unit and its connecting cord at least 1m away from the antenna or signal line of television, radio or telephone. This is to avoid noise interference.
- Do not install outdoor unit facing strong wind direction. It may damage the fan motor.
- Decide the location for piping after sorting out the different types of pipe available.
- When removing side cover, please pull the handle after undoing the hook by pulling it downward.

Installation of refrigerating pipes and air removal

Please refer to Chapter 11 Refrigerant Piping and Refrigerant Charge

Connecting of Power cord

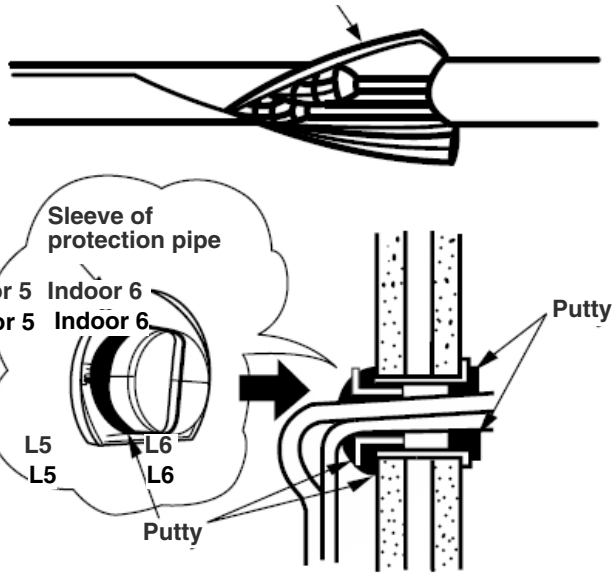

Please refer to the Chapter 13 Electrical wiring.

10.3 FINAL STAGE OF INSTALLATION

10.3.1. INSULATION AND MAINTENANCE OF PIPE CONNECTIONS

- The connected terminals should be completely sealed with heat insulator and then tied up with rubber strap.
- Please tie the pipe and power line together with vinyl tape as shown in the figure showing the installation of Indoor and Outdoor units. Then fix their position with holders.
- To enhance the heat insulation and to prevent water condensation, please cover the outdoor part of the drain hose and pipe with insulation pipe.
- Completely seal any gap with putty

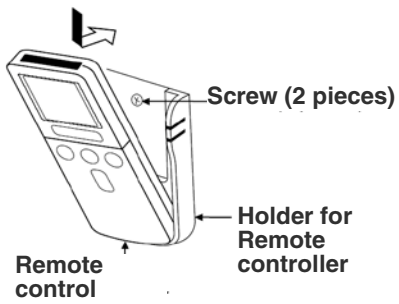

Insulation material for pipe connection

10.3.2. INSTALLATION OF REMOTE CONTROLLER

- The remote controller can be placed in its holder which is fixed on wall or beam
- To operate the remote controller at its holder, please ensure that the unit can receive signal transmitted from the controller at the place where the holder is to be fixed. The unit will beep when signal is received from the remote controller. The signal transmission is weaken by the fluorescent light. Therefore, during the installation of the remote control holder, please switch on the light, even during day time, to determine the mounting location of the holder.

The controller must be hooked onto the hook at the lower part of the holder. Push in the remote controller in the direction as shown in figure below.

11 REFRIGERANT PIPING AND REFRIGERANT CHARGE

CONTENTS

11 REFRIGERANT PIPING AND REFRIGERANT CHARGE _____ 11-1

11.1. REFRIGERANT PIPING _____ 11-2

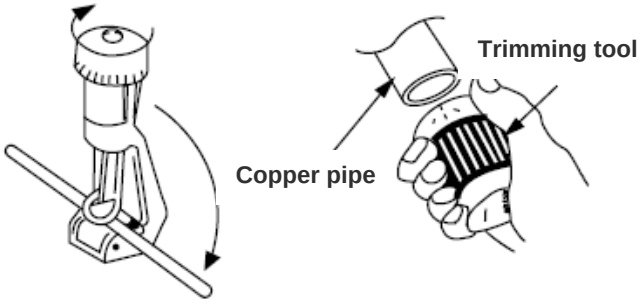

11.1.1. Preparation of pipe _____ 11-2
11.1.2. Pipe Connection _____ 11-2
11.1.3. Removal of air from the pipe and gas leakage inspection _____ 11-2

11.2. RECOVERY OF REFRIGERANT DURING RELOCATION OR UNINSTALLING OF UNIT. _____ 11-3

11.1. REFRIGERANT PIPING

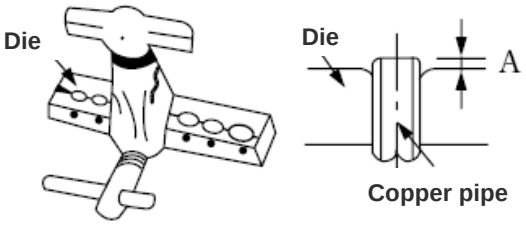

11.1.1. PREPARATION OF PIPE

- Use a pipe cutter to cut the copper pipe

CAUTION

- Jagged edge will cause leakage
- Point the side to be trimmed downwards during trimming to prevent copper chips from entering the pipe
- Before flaring, please put on the flare nut and use exclusive tool

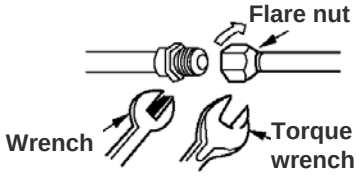

Outer diameter (Ø)	A (mm)	
	Imperial flaring tool	Rigid flaring tool
6.35mm (1/4")	0~0.5 mm	1.0 mm
9.52mm (3/8")	0~0.5 mm	1.0 mm
12.7mm (1/2")	0~0.5 mm	1.0 mm
15.88mm (5/8")	0~0.5 mm	1.0 mm

11.1.2. PIPE CONNECTION

Caution

- In case of removing flare nut of an indoor unit, first remove a nut of small diameter side, or else a seal cap of big diameter side will fly out. Prevent water from entering into piping when working
- Please be careful when bending the copper pipe.
- Screw in manually while adjusting the center. After that, use a torque wrench to tighten the connection.

		Outer dia of pipe	Torque N.m (kgf.cm)
Small dia side		**6.35mm (1/4")**	**13.7~18.6 (140~190)**
Large dia side		**9.52mm (3/8")**	**34.3~44.1 (350~450)**
		12.7mm (1/2")	**44.1~53.9 (450~550)**
		15.88mm (5/8")	**49.0~58.8 (500~600)**
Valve head cap	Small dia side	**6.35mm (1/4")**	**19.6~24.5 (200~250)**
	Large dia side	**9.52mm (3/8")**	**19.6~24.5 (200~250)**
		12.7mm (1/2")	**29.4~34.3 (300~350)**
		15.88mm (5/8")	**29.4~34.3 (300~350)**
Valve core cap			**12.3~15.7 (125~160)**

11.1.3. REMOVAL OF AIR FROM THE PIPE AND GAS LEAKAGE INSPECTION

■ Procedures of using Vacuum Pump for Air Removal

①As shown in figure below , remove the cap of valve core. Then, connect the charge hose. Remove the cap of valve head. Connect the vacuum pump adaptor to the vacuum pump and connect to

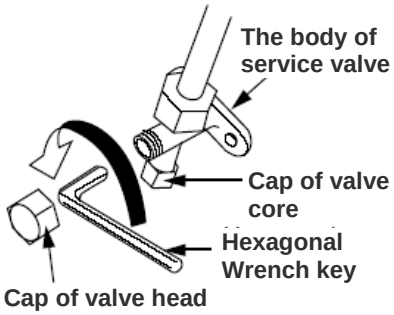

When the meter reaches -101kPa (-76cmHg) during pumping, fully tighten the shuttle

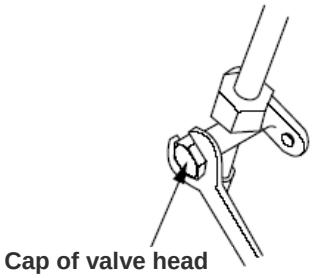

When pumping starts, slightly loosen the flare nut to check of air sucked in. Then tighten the flare nut.

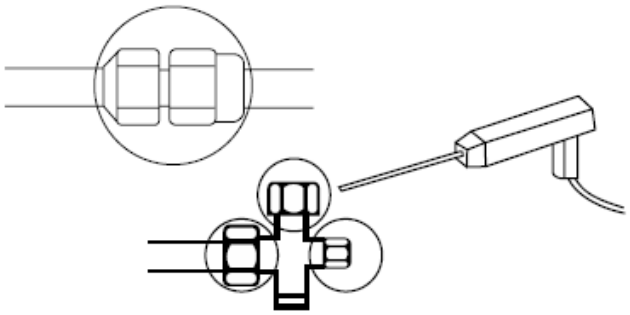

②Fully tighten the "Hi" shuttle of the manifold valve and completely unscrew the "Lo" shuttle. Run the vacuum pump for about 10~15 minutes, then completely tighten the "Lo" shuttle and switch off the vacuum pump

③Completely unscrew the spindle of the service valve (at 2 places) in anticlockwise direction to allow the flow of coolant (using Hexagonal Wrench key).

④Remove the charge hose and tighten the cap of valve head. Check the cap's periphery if there is any gas leakage. The task is then completed.

■ **Gas Leakage Inspection**

Please use gas leakage detector to check if leakage occurs at the connection of Flare nut as shown on the right.

11.2. RECOVERY OF REFRIGERANT DURING RELOCATION OR UNINSTALLING OF UNIT.

1) Switching on the outdoor unit's service switch will run the forced cooling operation
2) After operating for around 5 minutes, rotate the service valve spindle located at the side of the small pipe rim, in a clockwise direction to achieve a full shut off.
3) After operating for around 2~3 minutes, rotate the service valve spindle located at the side of the large pipe rim, in a clockwise direction to attain a full shut off.
4) Immediately stop the forced cooling operation and switch off the power supply.
5) Use a spanner or similar tools to tighten fully all valve cap and valve core cap to their specified torque values.
6) Install and tighten the seal caps and flared nuts on all connecting mouths of each and every piping installed.

12.5.2 Specification of drain pump 12-5
12.6 CONDENSED WATER DISPOSAL OF OUTDOOR UNIT 12-5
12.7 Drain Pipe Accessories 12-6

12.1 WALL TYPE INDOOR

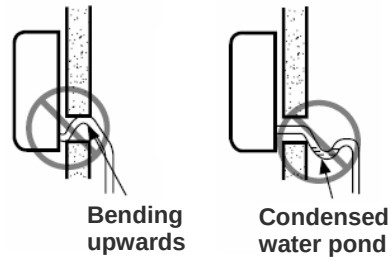

Installation of drain hose

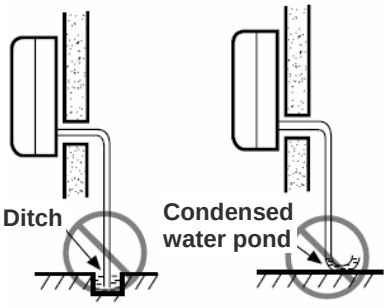

CAUTION:

- You are free to choose the side (left or right) for the installation of drain hose. Please ensure the smooth flow of condensed water of the indoor unit during installation. (Carelessness may result in water leakage)

CAUTION

- Be sure that the drain hose is not loosely connected or bent

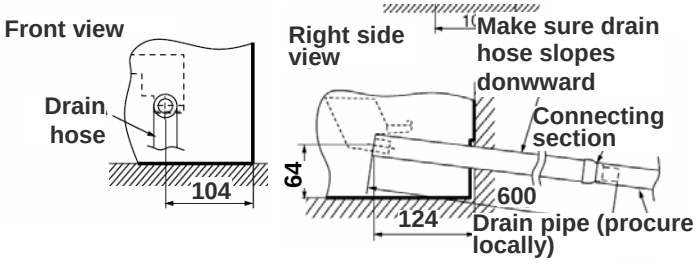

12.2 FLOOR TYPE INDOOR

12.2.1 DRAIN PIPE

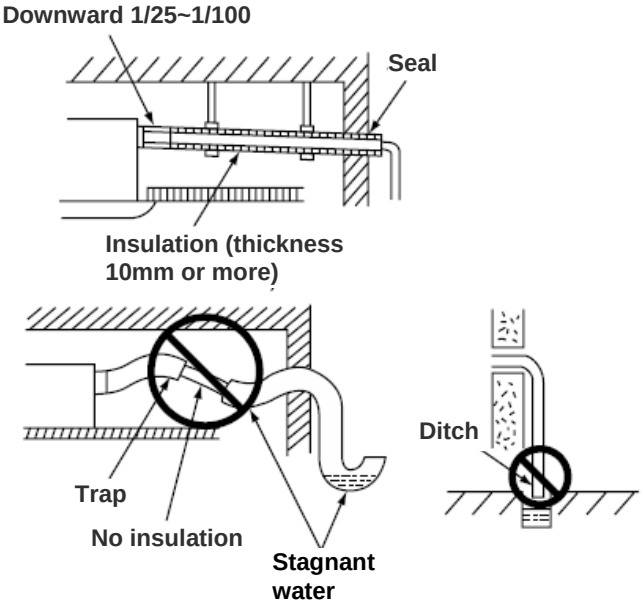

- Make sure drain pipe slopes downward so that drain flows smoothly without being trapped in the middle.
- The drain hose (connecting port outer diameter: 16mm or 20mm, length: 600mm) is included in the indoor unit. Prepare a drain pipe as shown in the following figure.
- To prevent condensation, the indoor drain pipe should be covered with heat insulation material with a thickness of more than 10mm.
- After piping is completed, check to make sure that drain discharges smoothly. Seal the drain pipe tightly with tape to keep dirt out.

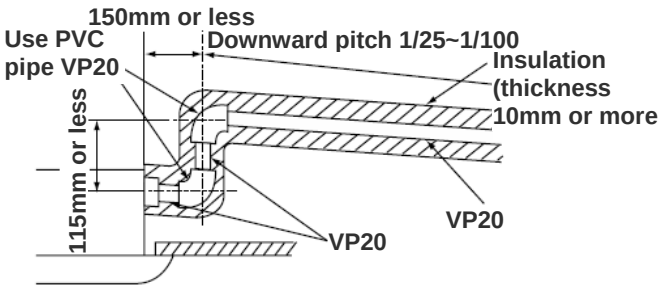

12.3 4 WAY CEILING CASSETTE

12.3.1 DRAIN PIPE INSTALLATION

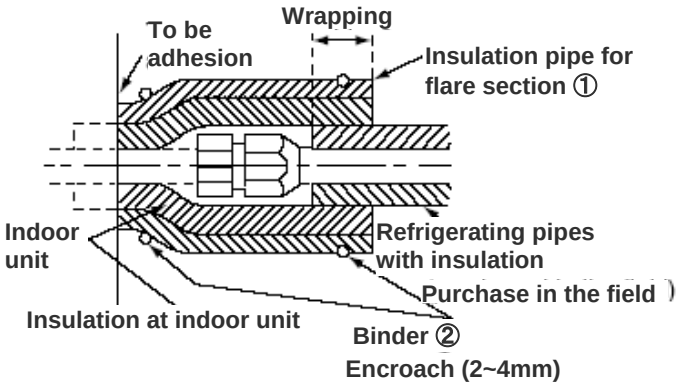

- Use PVC pipe VP20 (O.D. 26mm) for drain pipe.
- Be sure to roll insulation (thickness 10mm or more) fro the drain pipe at the indoor side.
- Always draw the drain pipe downward so that water flows smoothly. Fix it (ex. by hanger) to prevent a peak and trap

- In case drain piping cannot be done smoothly due to obstacles, it can also be arranged outside main unit as shown in the drawing below.

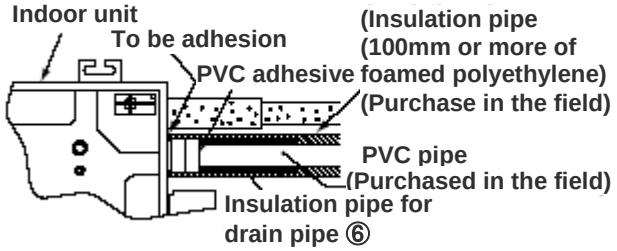

12.3.2 CONNECTION OF DRAIN PIPE

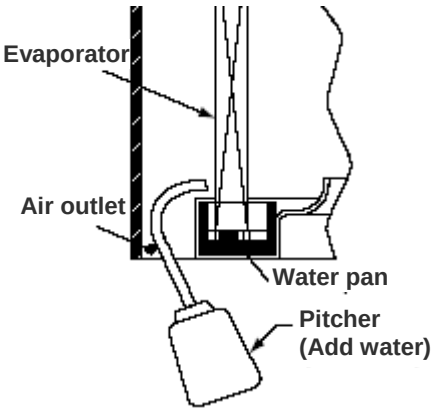

- Securely glue connection part of drain hose and PVC pipe, using PVC adhesive.
- If gluing of drain hose and PVC pipe is too weak, water leakage may occur. Be sure to wrap generally-available insulator (10mm or more of

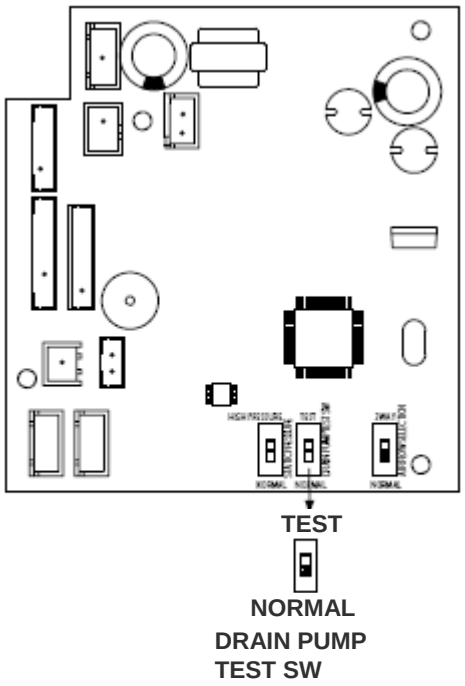

foamed polyethylene) around drain hose, inside the house, for insulation heat.

- Check drain for water leakage. Perform after connecting power.
- If inspection of drainage is not done, water drop may occur
- Add water to water pan of indoor unit as shown below.

- Perform test running of drain pump to check drainage operation.
  ①Turn power on
  ②Remover cover o felectric box and set the drain pump test run switch to test.
  ③After checking the drainage, return the switch to NORMAL

Caution

- If drain pump test run is always set to TEST, drain pump may malfunction

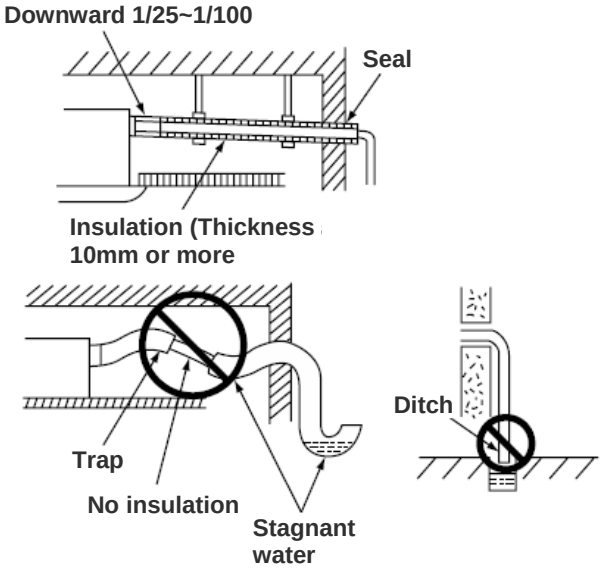

12.4 DUCT TYPE INDOOR

12.4.1 DRAIN PIPE INSTALLATION

- Use PVC pipe (polyvinyl chloride) VP20 with the following outer diameter for(O.D. 26mm) for drain pipe.

Model	Outer diameter
RAD-25RPA/35RPA/50RPA	26 mm
RAD-50PPA/60PPA/70PPA	32 mm

- Be sure to roll insulation (thickness 10mm or more) from the drain pipe at the indoor side.
- Always draw the drain pipe downward so that water flows smoothly. Fix it (ex. by hanger) to prevent a peak and trap

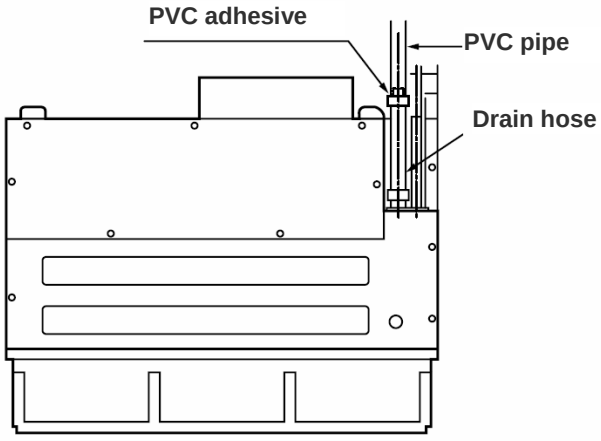

12.4.2 CONNECTION OF DRAIN PIPE

1) Securely glue connection part of drain hose and PVC pipe, using PVC adhesive.

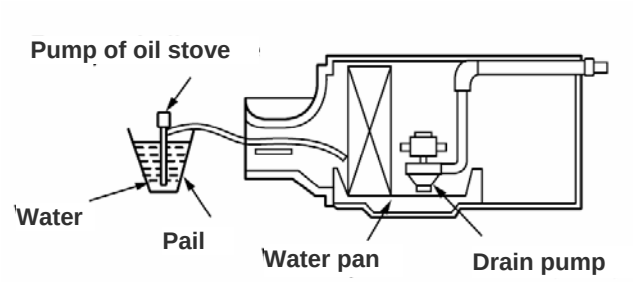

CAUTION

- If gluing of drain hose and PVC pipe is too weak, water leakage may occur.

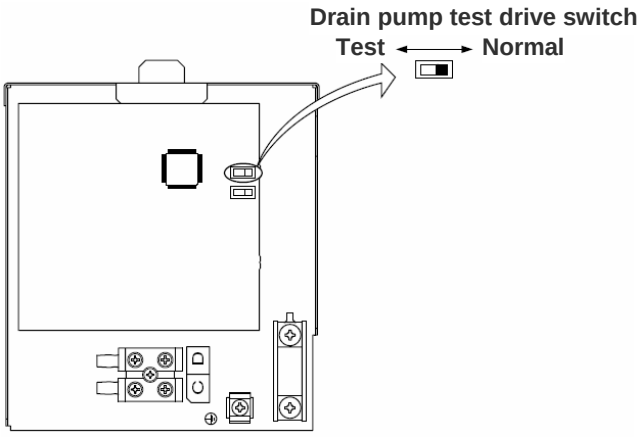

2) Be sure to wrap generally available insulator (10mm or more of foamed polyethylene) around drain hose, inside the house for insulation heat.

3) Perform checking of drain and water leakage after connecting power supply
   - Add water to water pan of indoor unit as shown below

4) Test run method
- Turn power on
- Remove lid of electric box and set the drain pump test run switch to TEST RUN
- After checking the drainage, return the switch to NORMAL

5) Perform test running of drain pump to check drainage operation

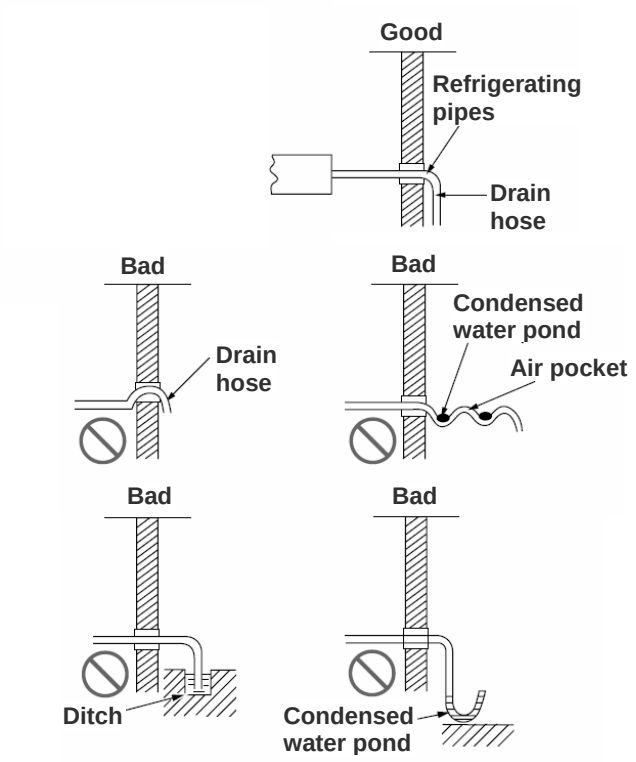

Caution

If drain pump test run is always set to TEST, drain pump may malfunction

12.4.3 CHECKING OF DRAWING HOSE

①Connect the separate drain hose to the drain hose that is attached to the indoor unit

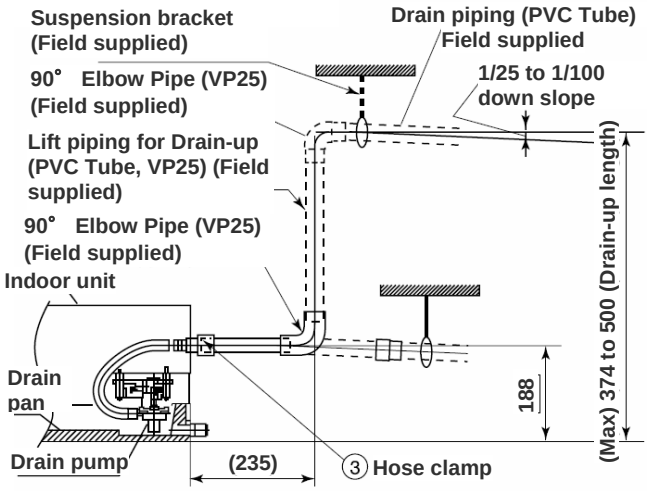

②For keeping the smooth flowing of condensed water, the drain hose should be inclined as shown in figure below.

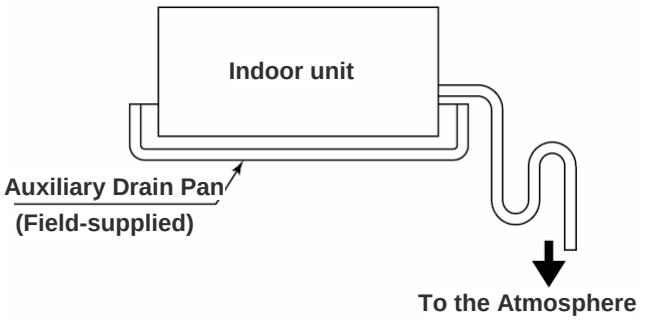

Caution

- Please ensure the smooth flow of condensed water of the indoor unit during installation. (Carelessness may result in water leakage
- Be sure that the hose is not loosely connected or bent
- In case drain piping cannot be done smoothly due to obstacles, it can also be arranged outside of the main unit as shown in the drawing below.
- Maximum drain-up length shall be

Applicable models	Max drain up length
RAD-25RPA/35RPA/50RPA	300mm
RAD-50PPA/60PPA/70PPA	500mm

- When the relative humidity of inlet or ambient air exceeds 80%, apply an (field-supplied) auxillary drain pan beneath the indoor unit as show below

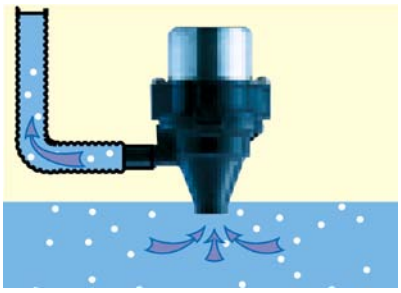

12.5 DRAIN PUMP

12.5.1 BUILD IN DRAIN PUMP

The air conditioner is equipped with an internal drain pump to remove accumulated condensation water from drain pan even while it is operating. A float switch

- Monitors the water level and automatically activates the pump as necessary.

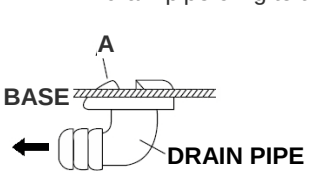

*Applicable for ceiling cassette type indoor and duct type indoor only.

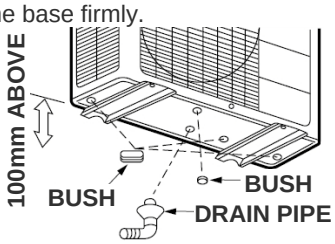

12.5.2 SPECIFICATION OF DRAIN PUMP

Applicable models	RAI-25RPA, RAI-35RPA, RAI 50RPA	RAD-18RPA, RAD-25RPA, RAD-35RPA, RAD-50RPA	RAD-50PPA, RAD-60PPA, RAD-70PPA
Fluid	Water	Water	Water
Fluid temperature °C	0 ~ 40	0 ~ 40	0 ~ 40
Ambient temperature °C	0 ~ 40	0 ~ 40	-10 ~ 50
Max humidity %	95 and below	95 and below	95 and below
Storage temperature °C	-10~70°C	-10~70°C	-20~80°C
Mounting direction	Shall be install upward Slanting gradient should be less than 5 degree	Shall be install upward Slanting gradient should be less than 5 degree	Shall be install upward Slanting gradient should be less than 10 degree
Motor type	DC brushless motor (insulation class E)	DC brushless motor (insulation class E)	DC 2-pole motor (insulation class E)
Maximum lift	Lift 300mm water in rated voltage	Lift 300mm water in rated voltage	Lift 500mm water in rated voltage
Minimum water level	8mm	8mm	6mm
Noise	45dB max	45dB max	37dB max
Insulation resistance	100MΩ at DC500V	100MΩ at DC500V	100MΩ at DC500V
Life span	Operate continuously up to 10,000 hours, under 300mm lift, 10mm water level, rated voltage, and rated water temperature	Operate continuously up to 10,000 hours, under 300mm lift, 10mm water level, rated voltage, and rated water temperature	Operate continuously up to 15,000 hours, under 500mm lift, 10mm water level, rated voltage, and rated water temperature

12.6 CONDENSED WATER DISPOSAL OF OUTDOOR UNIT

- There are holes on the base of Outdoor unit for condensed water to discharge
- In order to drain out the condensed water, the unit is installed on a stand or a block so that the unit is 100mm above the ground as the shown figure. Join the drain pipe to one hole.
- At first insert one portion of the hook to the base (Portion A), then pull the drain pipe in the direction shown by the arrow while inserting the hook into the base. After installation, check whether the drain pipe cling to the base firmly.

When Use and Install in Cold Areas

- When using in cold region with severe cold climate and heavy snow, water discharged from the heat exchanger will freeze on the base surface and this may block the drainage. In such regions, remove the bush on the bottom face of outdoor unit to prevent water build up leading to icing and blockage. Keep a minimum gap of 250mm between the base and the ground. When using drain pipe, consult your sales agent

12.7 Drain Pipe Accessories

Outdoor Chassis Dimension (W x H x D)	Bush #1 	Bush #2 	Drain Pipe

13.1 GENERAL CHECK

ATTENTION:

– *Turn OFF*

– *Check to ensure that the indoor fan and the outdoor fan have stopped before electrical wiring work or a periodical check is performed.*

– *Protect the wires, drain pipe, electrical parts, etc. from rats or other small animals. If not protected, rats or other small animals may gnaw at unprotected parts and at the worst, a fire will occur.*

– *Avoid the wires from touching the refrigerant pipes, plate edges and electrical parts inside the unit. Otherwise, the wires will be damaged and at the worst, a fire will occur.*

CAUTION:

Tightly secure the wires with the cord clamp inside the indoor unit.

NOTE:

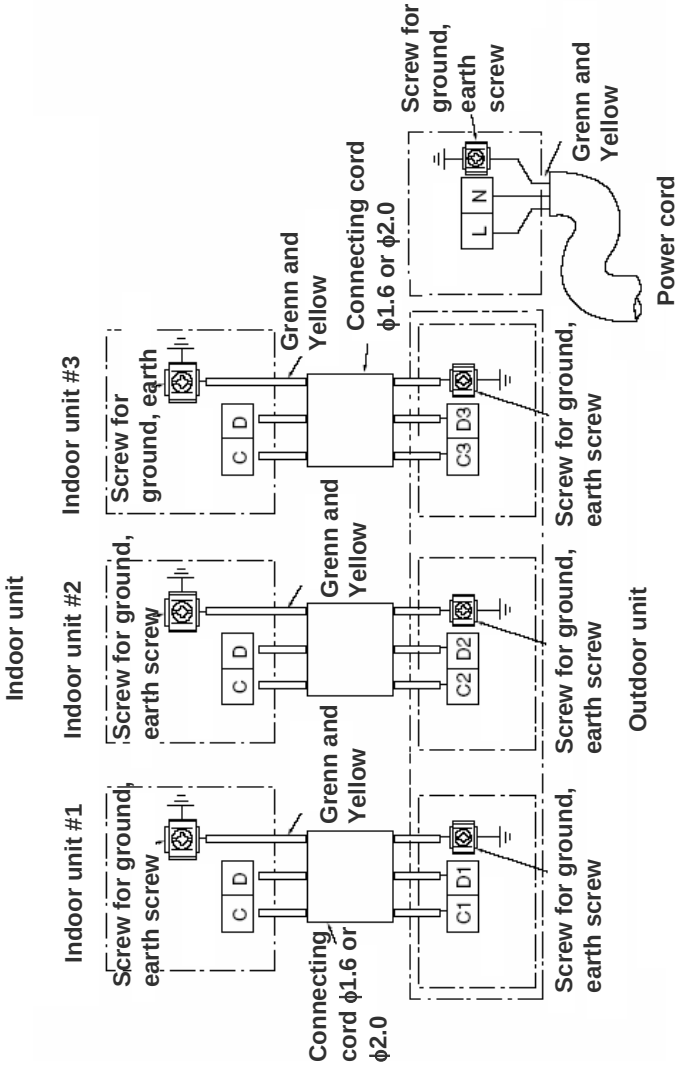

Fix the rubber bushes with adhesive when conduit tubes to the outdoor unit are not used.

1. Make sure that the field-selected electrical components (main power switches, circuit breakers, wires, conduit connectors and wire terminals) have been properly selected according to the electrical data given in this technical catalog. Make sure that the components comply with National Electrical Code (NEC).
2. Check to ensure that the power supply voltage is within ±10% of the rated voltage.
3. Check the capacity of the electrical wires. If the power source capacity is too low, the system cannot be started due to the voltage drop.
4. Check to ensure that the ground wire is connected.
5. Power Source Main Switch
   Install a multi-pole main switch with a space of 3.5mm or more between each phase.

13.2 ELECTRICAL WIRING FOR MONOZONE/MULTIZONE UNIT

13.2.1 PROCEDURES OF WIRING

Connect the electrical wiring between the Indoor and Outdoor unit, as shown below. Never connect the wiring by mistake.

In case of wrong connection, the unit does not operate properly and it may cause malfunction.
The connecting cord must be fixed by the banc which is located near the terminal board.

Connection of connecting cords and power cord

– Cut of the connecting cord, the power cord and strip the insulation of the wire.

– Connect the connecting cord and power cord to the terminal board.

– Fix the connecting cords and power cord with steel band certainly.

WARNING:

– *The naked part of the wire core should be10 mm and fix tem tightly to the terminal. Then try to pull the individual wireto check if the contact is tight. Improper insertion may cause the terminal to burn.*

– *Be sure to use only power cables approved from the authorities from your country. For example in Germany: Cable type : NYM 3x1.5mm^2*

– *Please refer to the installation manuals for wire connection to the terminals of the units. The cabling must meet the standards of electrical installation*
– *There is a AC voltage of 230V between the L and N terminals. Therefore, before servicing, be sure to remove the plug from the AC outlet or switch off the main switch.*

13.2.2 ELECTRICAL WIRING FOR OUTDOOR UNIT

Please remove the side cover for wire connection

WARNING:

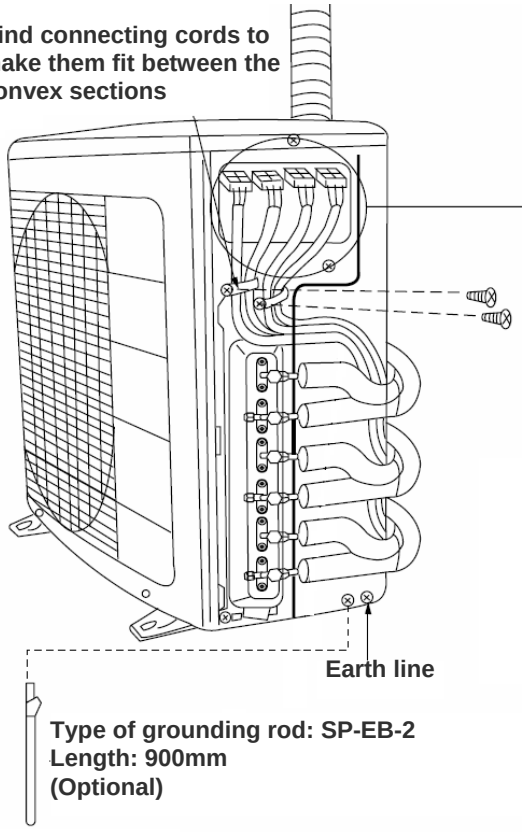

– *If you cannot attach the side cover due to the connecting cord, press the connecting cord in direction to the front panel to fix it.*
– *Be sure that the hooks of the side cover are fixed in certainly. Otherwise water leakage may occur and this causes short circuit of faults..*
– *The connecting cord should not touch the service valve or pipes. (It becomes high temperature during heating operation)*

Checking for electric source and the voltage range

Before installation, the power source must be checked and the necessary wiring work must be completed. To ensure poper wiring capacity, refer to the list of wire gauges below for the lead-in from the pole transformer and for the wiring from a switch board of a fuse box to the main switch and outdoor unit in consideration o fthe locked rotor current.

IMPORTANT

Cable length	Wire cross section
Up to 6m	1.5mm^2
Up to 15m	2.5mm^2
Up to 25m	4.0 mm^2

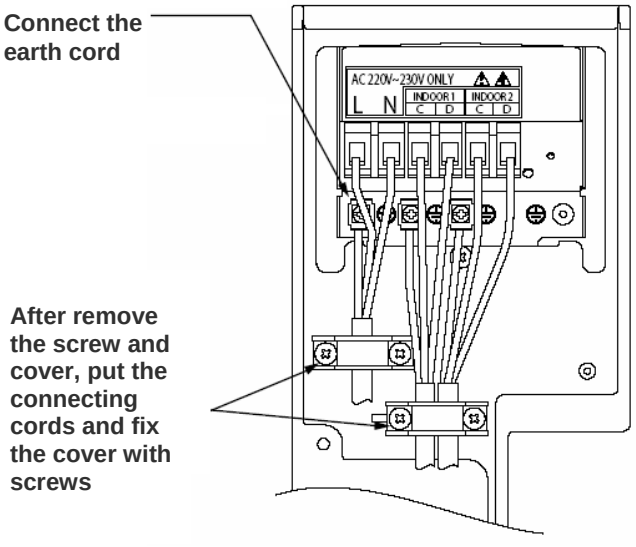

(Earth wire and grounding rod are not supplied. Please use optional items)

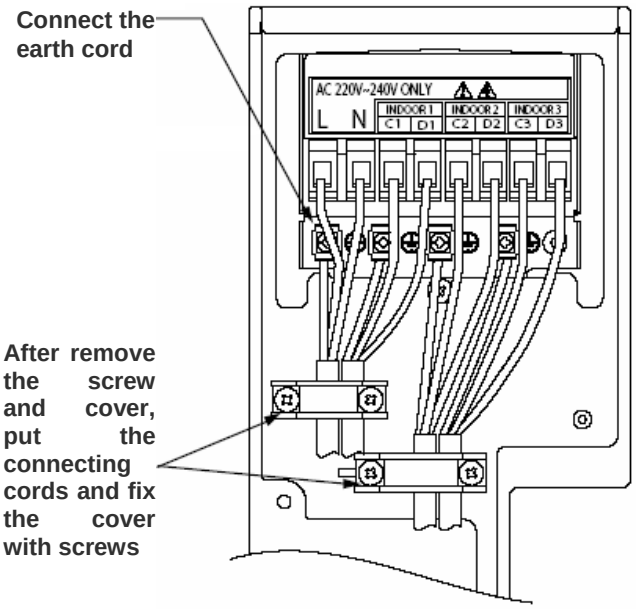

CAUTION:

– *Arrange the power cord so they do not touch the service valves*

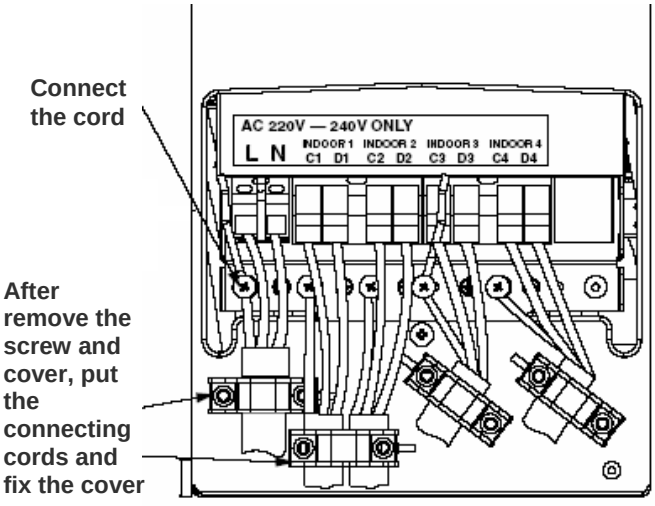

- **Applicable models : RAM-36NP2A / 53NP2A**

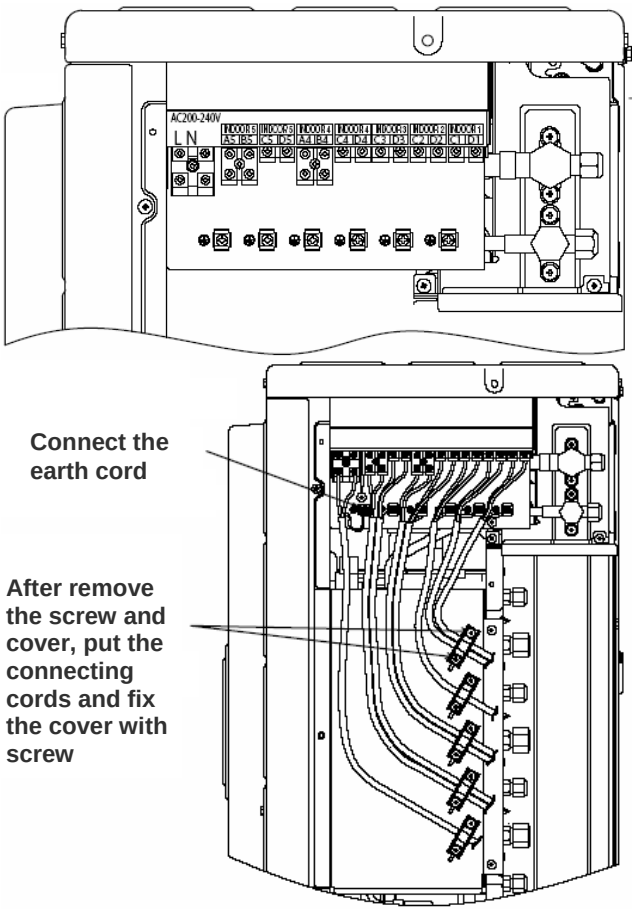

- **Applicable model: RAM-53NP3A / 68NP3A / 130NP6A**

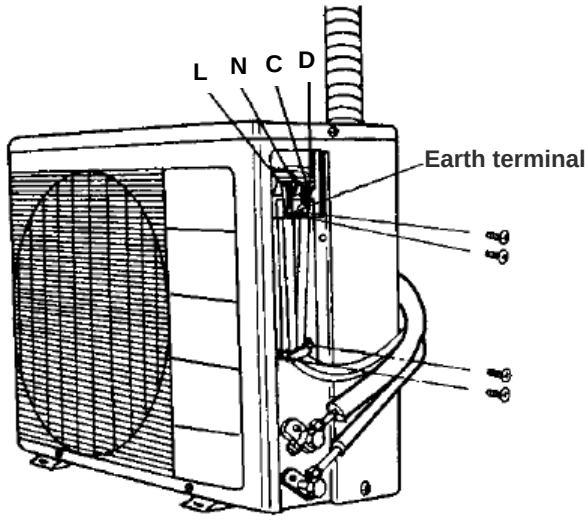

- **Applicable model : RAM-70NP4A**

- **Applicable model : RAM-90NP5A**

- **Applicable model : RAC-25NPA/RAC-35NPA/RAC-50NPA**

– Investigate the power supply capacity and other electrical conditions at the installation location.

– *Depending on the model of room air conditioner to be installed, requiest the customer to make arrangements for the necessary electrical work etc*

– *The electrical work includes the wiring work up to the outlet. In localities where electrical conditions are poor, use of a voltage regulation is recommended*

13.2.3 ELECTRICAL WIRING FOR WALL TYPE INDOOR UNIT

WARNING:

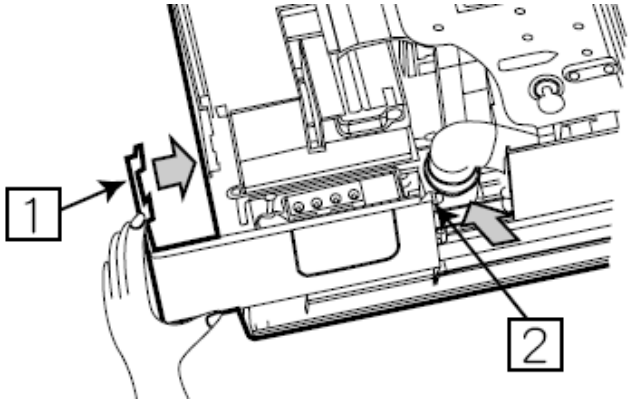

– *The appliance must be earthed*

– Remove the front panel and electrical cover to expose the electrical box in the indoor unit.

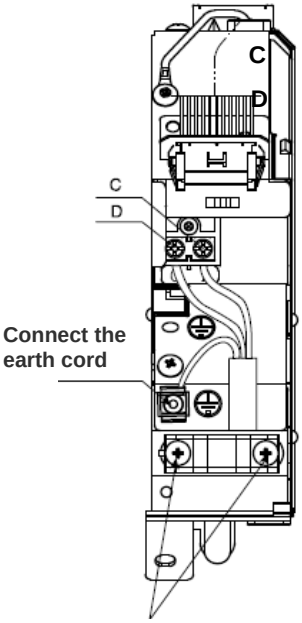

– Insert the connecting cord from the bottom of the unit.

– Fixed the wire firmly to the terminal.

- **Applicable Models : RAK-18QXA/RAK-25QXA/RAK-35QXA/RAK-50QXA**

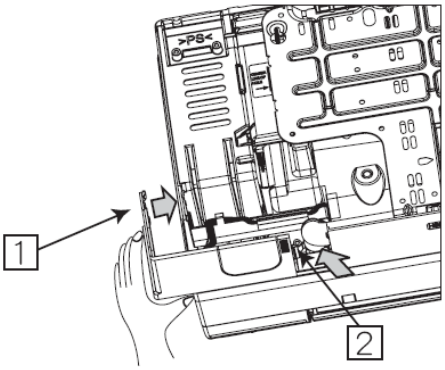

Pull the cover ① and ②in the directions as shown by arrows to remove the cover.

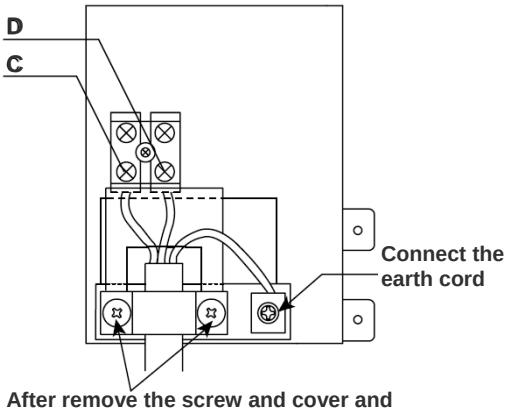

After remove the screw and cover, and put the connecting cords and fix the cover with screw

- **Applicable Models :**

RAK-18QPA/RAK-25QPA/RAK-35QPA/RAK-50QPA

Pull the cover ① and ②in the directions as shown by arrows to remove the cover.

13.2.4 ELECTRICAL WIRING FOR FLOOR TYPE INDOOR UNIT

WARNING:

– *The appliance must be earthed*

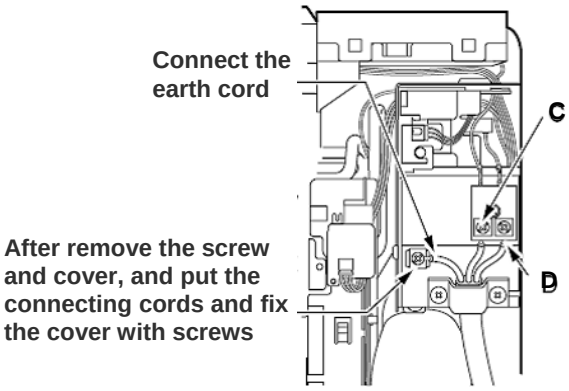

– *Remove the cover of the electric box.*

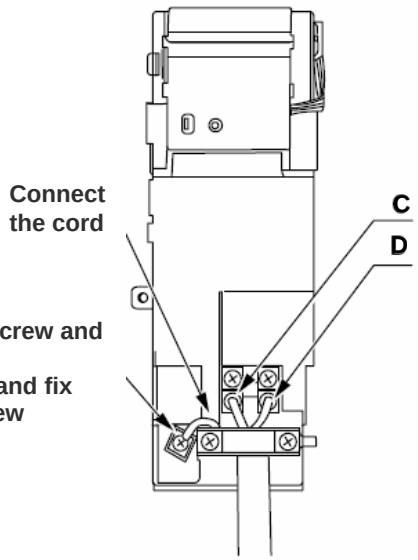

– *Connect the connecting cords*

– *Assemble the cover of electric box*

- **Applicable Models :**

RAF-25QXA/RAF-35QXA/RAF-50QXA

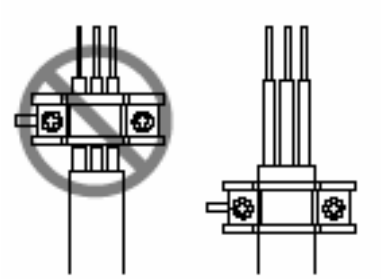

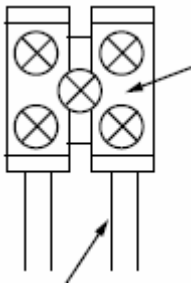

WARNING:

– *Leave some space in the connecting cord for maintenance purpose and be sure to secure it with the cord band.*

– *Secure the connecting cord along the coated part of the wire using the cord band. Do not exert pressure on the wire as this may cause overheating of fire*

Connection of connecting cord

Securely screw in the connecting cord so that it will not get loose or disconnect.
Tightening torque reference value: 1.2 ~ 1.6Nm (12~16kgf.cm)
Excessive tightening may damage the interior of the cord requiring replacement

Connecting cord

13.2.5 ELECTRICAL WIRING FOR 4 WAY CEILING CASSETTE TYPE INDOOR UNIT (RAI-25RPA/RAI-35RPA/RAI-50RPA)

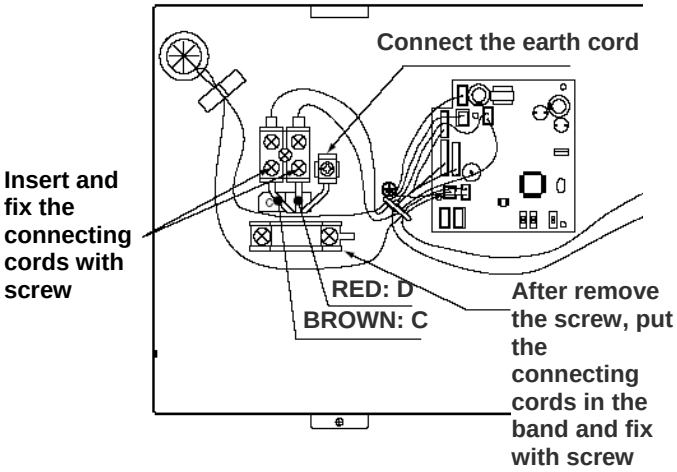

WARNING:

– *The appliance must be earthed*

– *Remove the cover of the electric box.*

– *Connect the connecting cords*

– *Assemble the cover of electric box*

13.2.6 ELECTRICAL WIRING FOR DUCT TYPE INDOOR UNIT (RAD-18RPA/RAD-25RPA/RAD-35RPA/RAD-50RPA/RAD-50PPA/RAD-60PPA/RAD-70PPA)

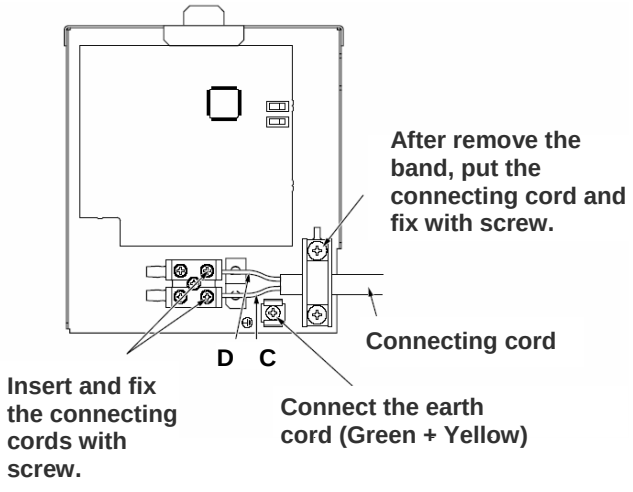

WARNING:

– *The appliance must be earthed*

– *Remove the cover of the electric box.*

– *Connect the connecting cords*

– *Assemble the cover of electric box*

13.3 ELECTRICAL WIRING FOR SINGLE INVERTER UNIT

WARNING:

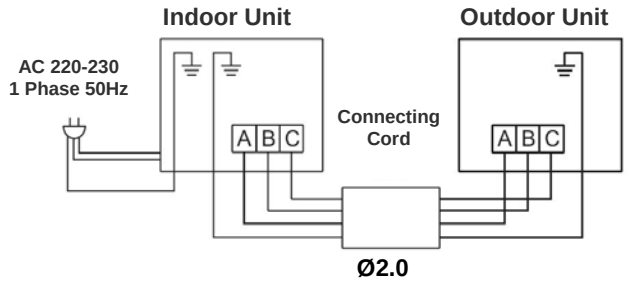

– *The appliance must be earthed*

– *Power supply shall be connected at the rated voltage; otherwise the unit will be broken or could not reach the specified capacity.*

13.3.1 PROCEDURES OF WIRING

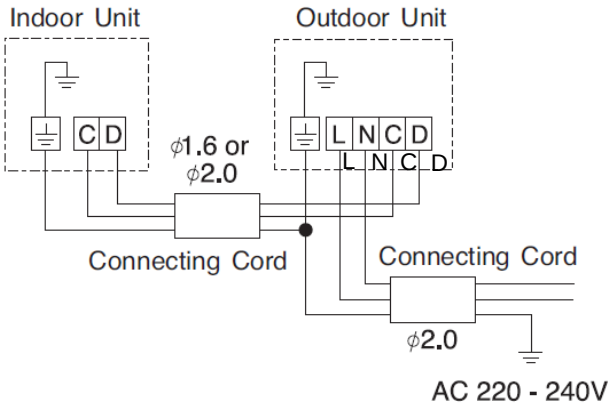

- **Applicable models**

RAK-18PSA/RAC-18WSA **RAK-18PSAN/RAC-18WSAN**
RAK-25PSA/RAC-25WSA **RAK-25PSAN/RAC-25WSAN**
RAK-35PSA/RAC-35WSA **RAK-35PSAN/RAC-35WSAN**

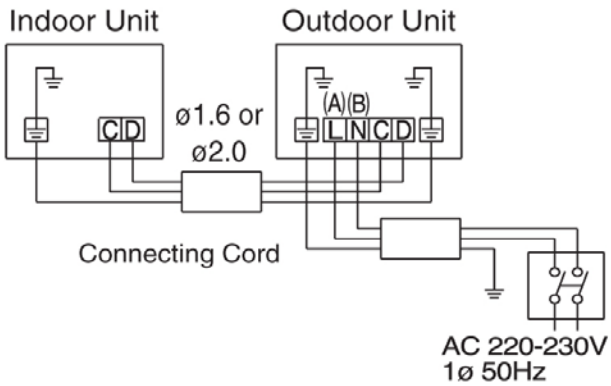

- **Applicable models** :

RAK-50PXA/RAC-50WXA
RAK-50PPA/RAC-50WPA

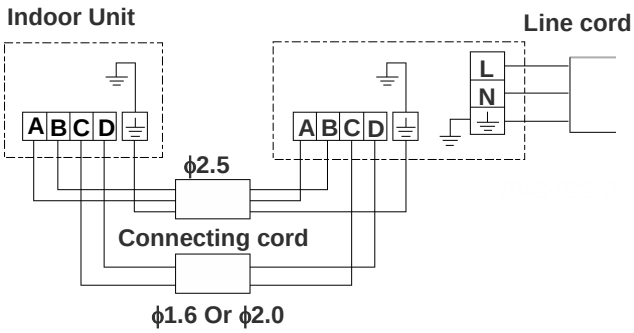

- **Applicable models**

RAF-25PXA/RAC-25FXA **RAK-25PPA/RAC-25WPA**
RAF-35PXA/RAC-35FXA **RAK-35PPA/RAC-35WPA**
RAF-50PXA/RAC-50FXA **RAK-18PEA/RAC-18WEA**
RAF-25RPA/RAC-25FPA **RAK-25PEA/RAC-25WEA**
RAF-35RPA/RAC-35FPA **RAK-35PEA/RAC-35WEA**
RAF-50RPA/RAC-50FPA **RAK-50PEA/RAC-50WEA**
RAK-25PXA/RAC-25WXA **RAK-18PSPA/RAC-18WSPA**
RAK-35PXA/RAC-35WXA **RAK-25PSPA/RAC-25WSPA**
RAK-18PPA/RAC-18WPA **RAK-35PSPA/RAC-35WSPA**

- **Applicable models :**

RAK-60PPA/RAC-60WPA **RAD-50PPA/RAC-50DPA**
RAK-70PPA/RAC-70WPA **RAD-60PPA/RAC-60DPA**
RAD-70PPA/RAC-70DPA

When removing the connecting wires for the indoor unit, please remove the low cover panel in front of the unit

WARNING:

– *The naked part of the wire core should be10 mm and fix them tightly to the terminal. Then try to pull the individual wire to check if the contact is tight. Improper insertion may cause the terminal to burn.*

– *Be sure to use only power cables approved from the authorities from your country. For example in Germany: Cable type : NYM 3x1.5mm^2*

– *Please refer to the installation manuals for wire connection to the terminals of the units. The cabling must meet the standards of electrical installation*

– *There is a AC voltage of 230V between the L and N terminals. Therefore, before servicing, be sure to remove the plug from the AC outlet or switch off the main switch.*

13.3.2 ELECTRICAL WIRING FOR INDOOR UNIT

WARNING:

– *The appliance must be earthed*

– Remove the front panel and electrical cover to expose the electrical box in the indoor unit.

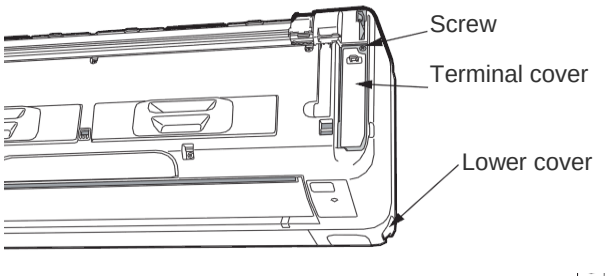

– Insert the connecting cord from the bottom of the unit.

– Fix the wire firmly to the terminal.

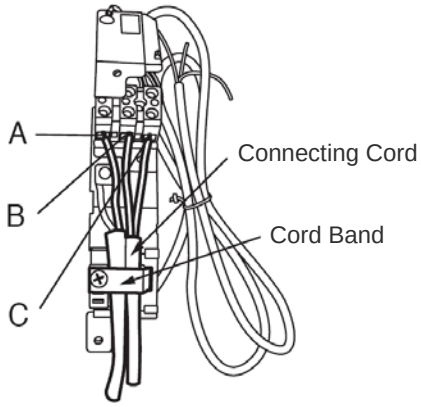

- **Applicable models :**

RAK-18PSA/RAK-25PSA/RAK-35PSA

RAK-18PSAN/RAK-25PSAN/RAK-35PSAN

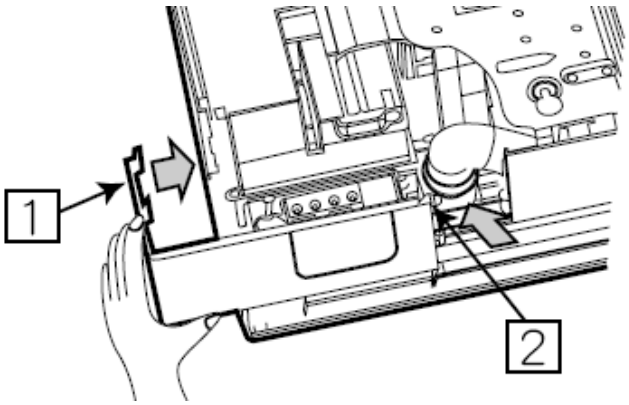

Remove the terminal cover and screw , hold the upper part when removing. Then remove the lower cover.

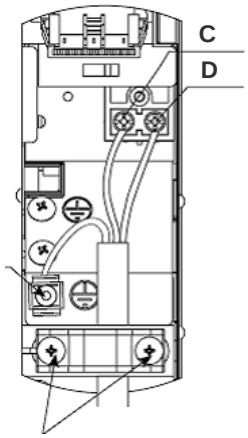

Connect the connecting cord with and fix with cord band

- **Applicable models :**

RAK-25PXA/RAK-35PXA/RAK-50PXA

Pull the cover ① and ②in the directions as shown by arrows to remove the cover.

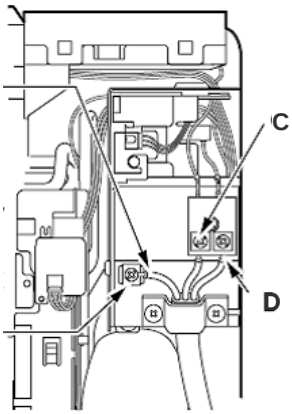

Connect the earth cord

After remove the screw and cover , and put the connecting cords and fix the cover with screw

- **Applicable Models :**

RAF-25PXA/RAF-35PXA/RAF-50PXA

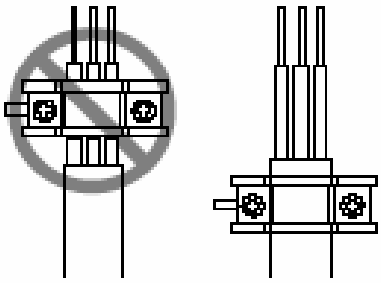

Connect the earth cord

After remove the screw and cover, and put the connecting cords and fix the cover with screws

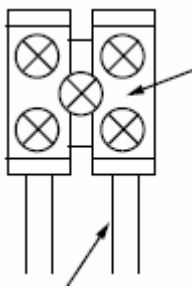

WARNING:

– *Leave some space in the connecting cord for maintenance purpose and be sure to secure it with the cord band.*

– *Secure the connecting cord along the coated part of the wire using the cord band. Do not exert pressure on the wire as this may cause overheating of fire*

Connection of connecting cord

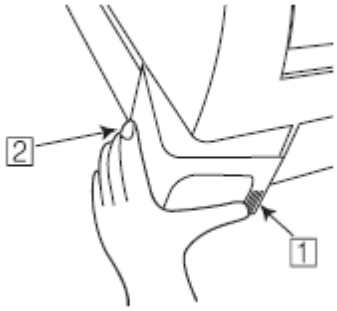

Securely screw in the connecting cord so that it will not get loose or disconnect.
Tightening torque reference value: 1.2 ~ 1.6Nm (12~16kgf.cm)
Excessive tightening may damage the interior of the cord requiring replacement

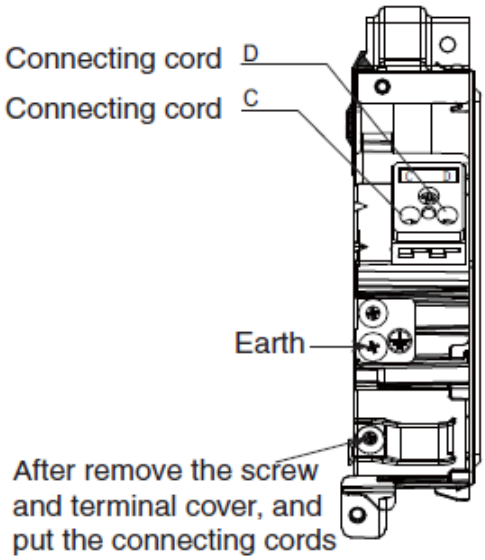

Connecting cord

- **Applicable models**

RAK-18PPA **RAK-18PEA** **RAK-18PSPA**
RAK-25PPA **RAK-25PEA** **RAK-25PSPA**
RAK-35PPA **RAK-35PEA** **RAK-35PSPA**
RAK-50PEA

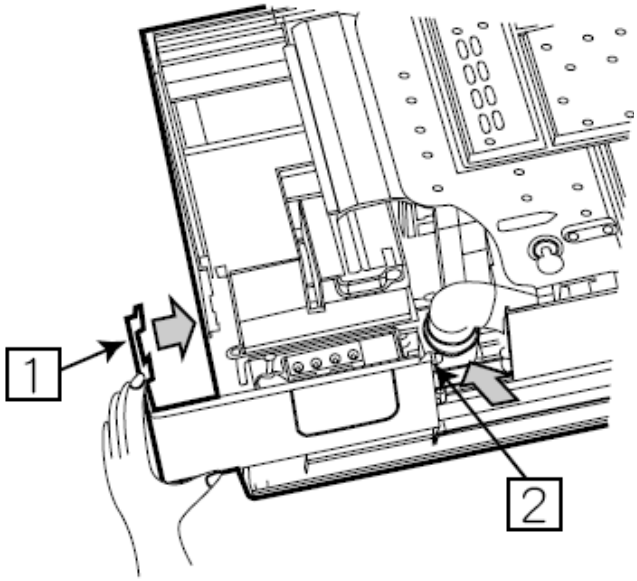

Pull the cover ① and ②in the directions as shown by arrows to remove the cover.

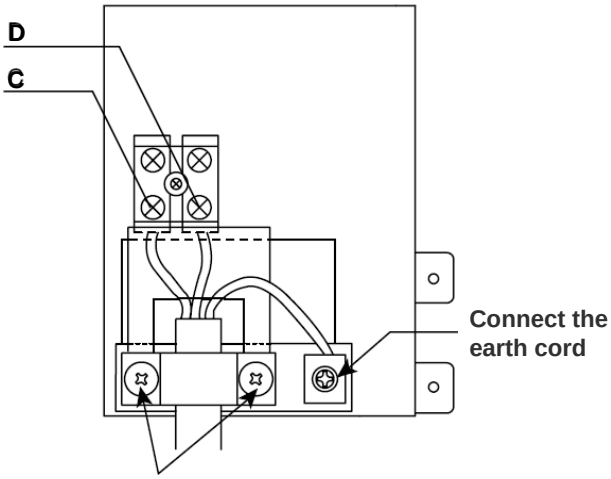

- **Applicable models**

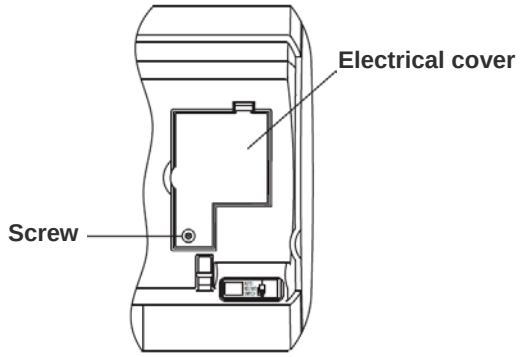

RAK-50PPA

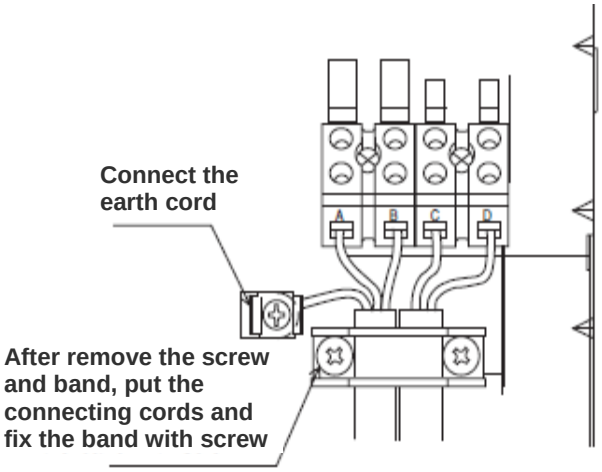

Pull the cover ① and ②in the directions as shown by arrows to remove the cover.

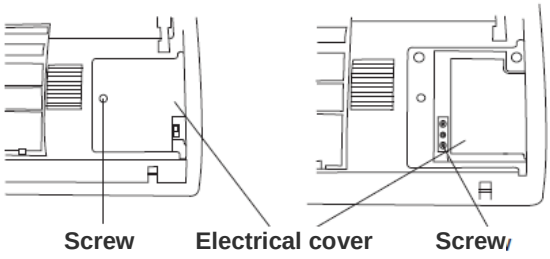

- **Applicable models :RAK-60PPA**

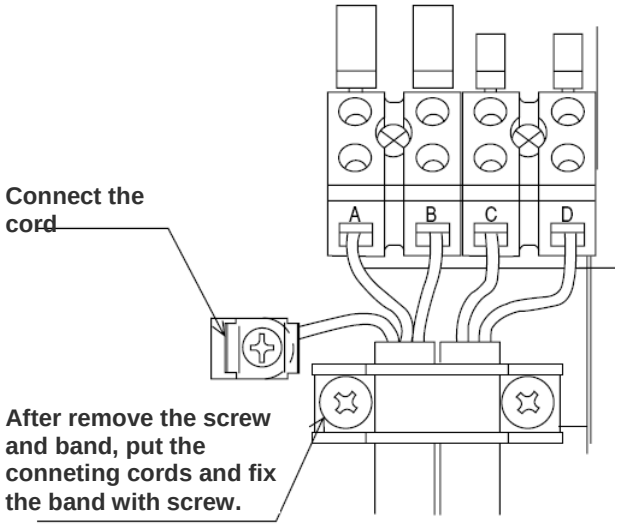

– Remove the screw and electrical cover
– Insert the connecting cord (A,B, C, D) from the bottom of unit
– Fixed the wire to terminal wires firmly as shown in the figure

- **Applicable models : RAK-70PPA**

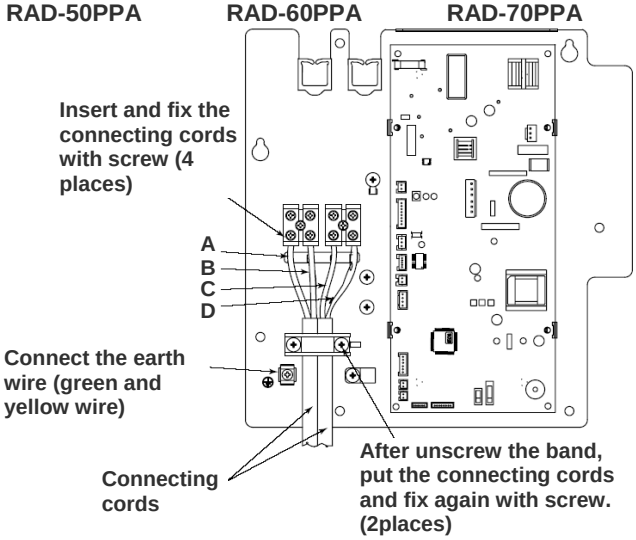

– Remove the screw and electrical cover
– Insert the connecting cord (A,B, C, D) from the bottom of unit
– Fixed the wire to terminal wires firmly as shown in the figure at right side.

- **Applicable models :**

RAD-50PPA RAD-60PPA RAD-70PPA

WARNING:

– *The appliance must be earthed*
– *Remove the cover of the electric box.*
– *Connect the connecting cords*
– *Assemble the cover of electric box*

13.3.3 ELECTRICAL WIRING FOR OUTDOOR UNIT

Please remove the side cover for wire connection

WARNING:

– *If you cannot attach the side cover due to the connecting cord, press the connecting cord in direction to the front panel to fix it..*
– *Be sure that the hooks of the side cover are fixed in certainly. Otherwise water leakage may occur and this causes short circuit of faults..*
– *The connecting cord should not touch the service valve or pipes. (It becomes high temperature during heating operation)*

Checking for electric source and the voltage range

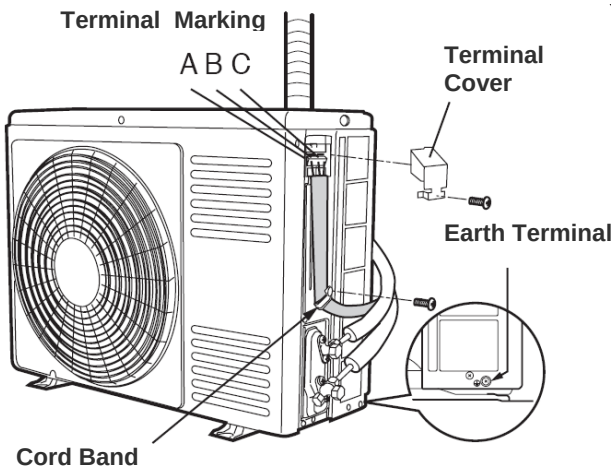

- Before installation, the power source must be checked and the necessary wiring work must be completed. To ensure poper wiring capacity, refer to the list of wire gauges below for the lead-in from the pole transformer and for the wiring from a switch board of a fuse box to the main switch and outdoor unit in consideration o fthe locked rotor current.

- Investigate the power supply capacity and other electrical conditions at the installation location. Depending on the model of room air conditioner to be installed, request the customer to make arrangements for the necessary electrical work etc.
  The electrical work includes the wiring work up the outlet. In localities where electrical conditions are poor, use of a voltage regulation is recommended.
  Install outlet for the room air conditioner within the reach of the line cord.

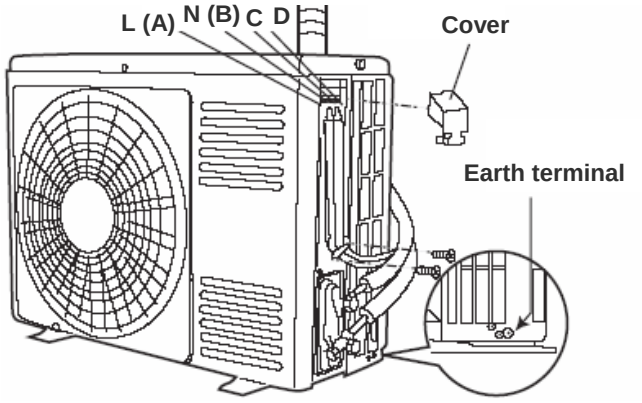

IMPORTANT

– Investigate the power supply capacity and other electrical conditions at the installation location.

– *Depending on the model of room air conditioner to be installed, requiest the customer to make arrangements for the necessary electrical work etc*

– *The electrical work includes the wiring work up to the outlet. In localities where electrical conditions are poor, use of a voltage regulation is recommended*

14.9 CHECKING POWER MODULE 14-43

14.9.1 RAC-25NPA, 35NPA, 50NPA & RAM-36NP2A, 53NP2A, 53NP3A, 68NP3A, 70NP4A, 130NP6A 14-43
14.9.2 RAM-90NP5A 14-43
14.9.3 RAC-18/25WPA, RAC-25/35/50WXA, RAC-25/35/50FXA, RAC-18/25/35/50WEA 14-44
14.9.4 RAC-35WPA, RAC-25/35FPA 14-44
14.9.5 RAC-50/60/70WPA, & RAC-50/60/70DPA 14-45
14.9.6 RAC-18/25/35WSA, RAC-18/25/35WSAN, RAC-18/25/35WSPA, RAC-50FPA 14-45

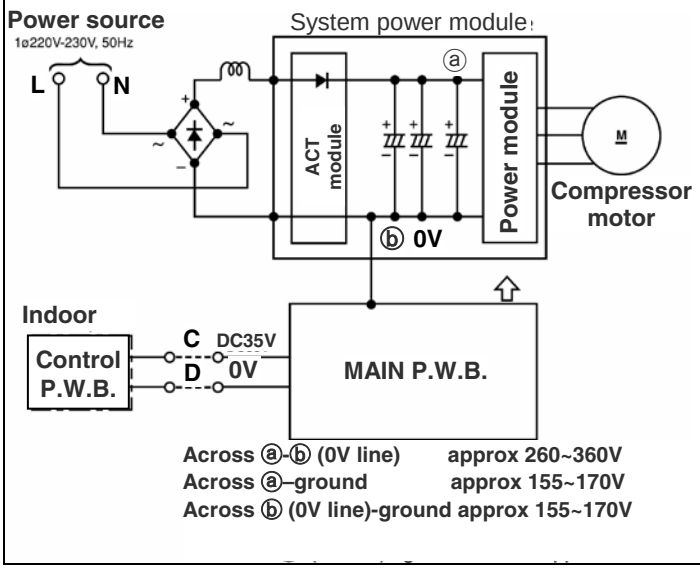

14.10 THERMISTOR 14-46

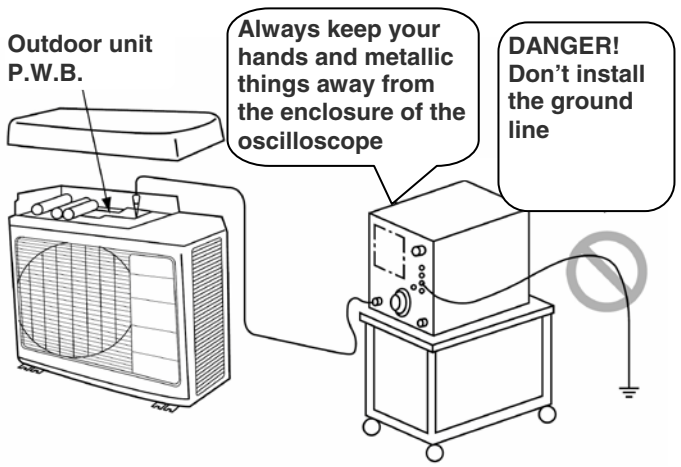

14.10.1 Name and role of each thermistor 14-46
14.10.2 Reference value for thermistor's resistance and temperature 14-46
14.10.3 Monozone Outdoor 14-47

14.1 PRECAUTIONS FOR TROUBLE SHOOTING

14.1.1 MONOZONE RAC-25NPA / 35NPA / 50NPA

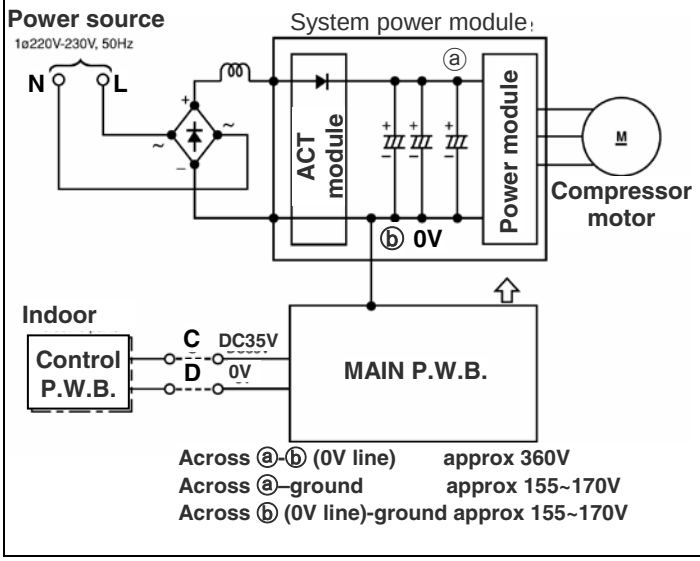

⚠Warning	⚠Warning
Remember that voltage of 155-170V is applied to the 0V line on the P.W.B. or the like as shown in the diagram below	When using an oscilloscope, never ground it. Don't forget that high voltage as noted in the left figure may apply to the oscilloscope.

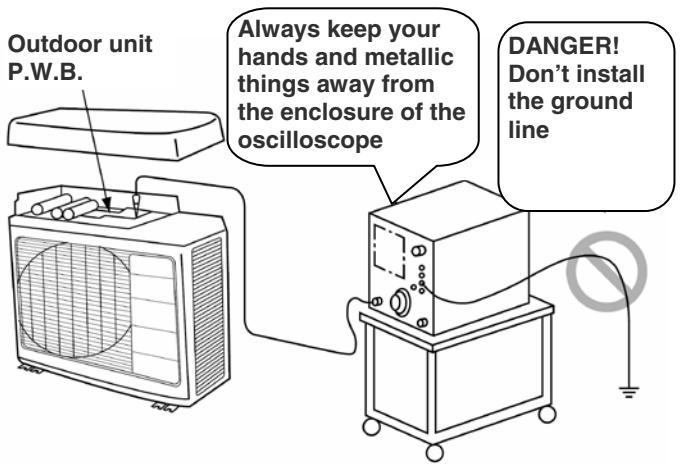

14.1.2 MULTIZONE RAM-36NP2A

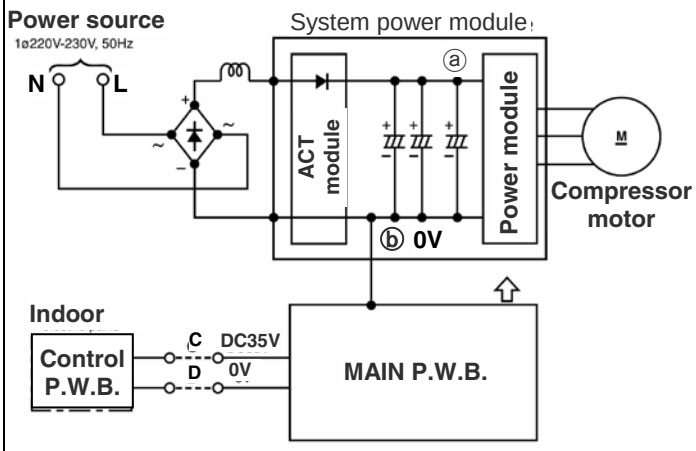

⚠Warning	⚠Warning
Remember that voltage of 155-170V is applied to the 0V line on the P.W.B. or the like as shown in the diagram below	When using an oscilloscope, never ground it. Don't forget that high voltage as noted in the left figure may apply to the oscilloscope.

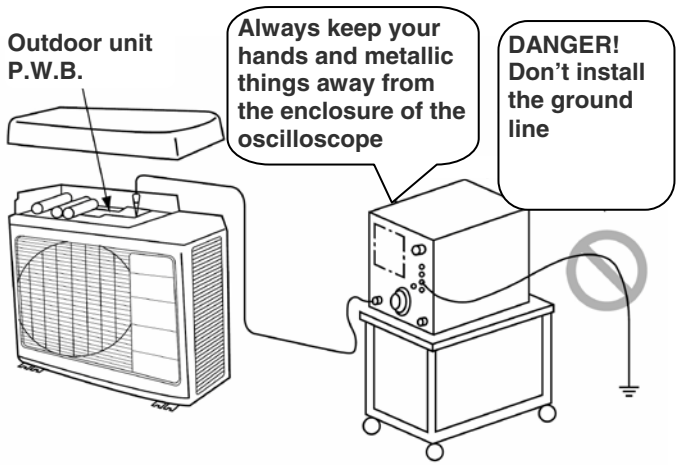

14.1.3 MULTIZONE/MONO SPLIT RAM-53NP2A / 53NP3A / 68NP3A / 70NP4A , MONO SPLIT RAF-50PXA/RAC-50FXA

⚠Warning	⚠Warning
Remember that voltage of 162V is applied to the 0V line on the P.W.B. or the like as shown in the diagram below	When using an oscilloscope, never ground it. Don't forget that high voltage as noted in the left figure may apply to the oscilloscope.

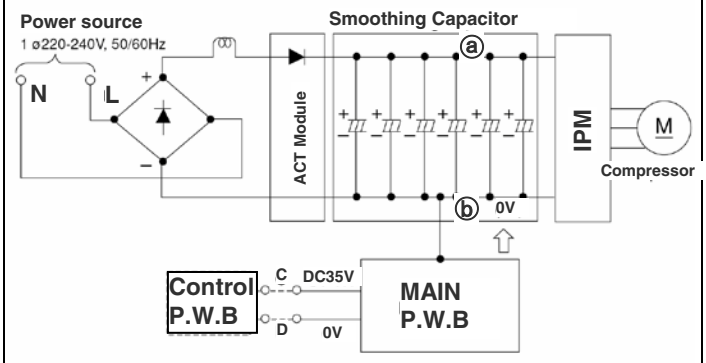

Across ⓐ-ⓑ (0V line) approx 360V
Across ⓐ–ground approx 155~170V
Across ⓑ (0V line)-ground approx 155~170V

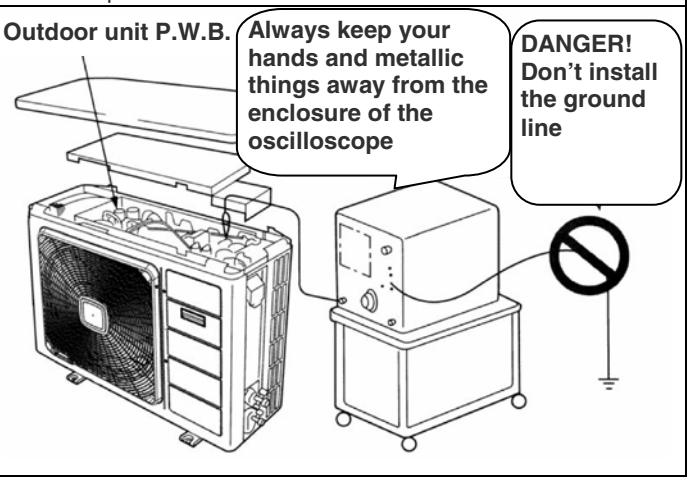

14.1.4 MULTIZONE RAM-90NP5A

⚠Warning	⚠Warning
Remember that the 0V line is biased at 162V in reference to the ground level. Also note that it takes about 10 minutes until the voltage fall after the power switch is turned OFF.	When using an oscilloscope, never ground it. Don't forget that high voltage as noted in the left figure may apply to the oscilloscope.

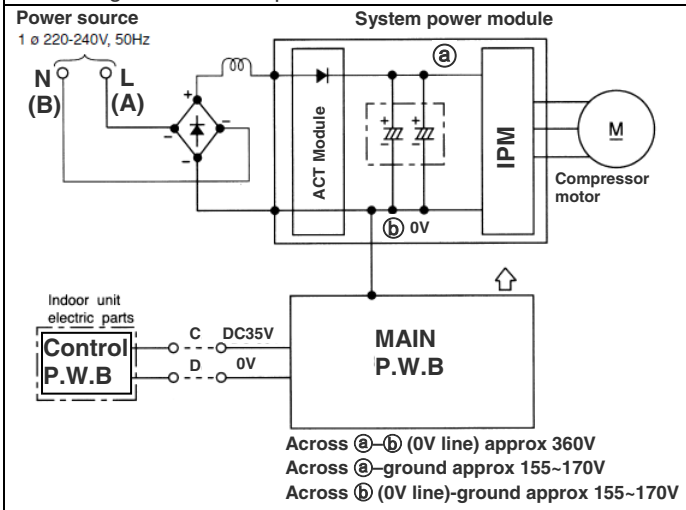

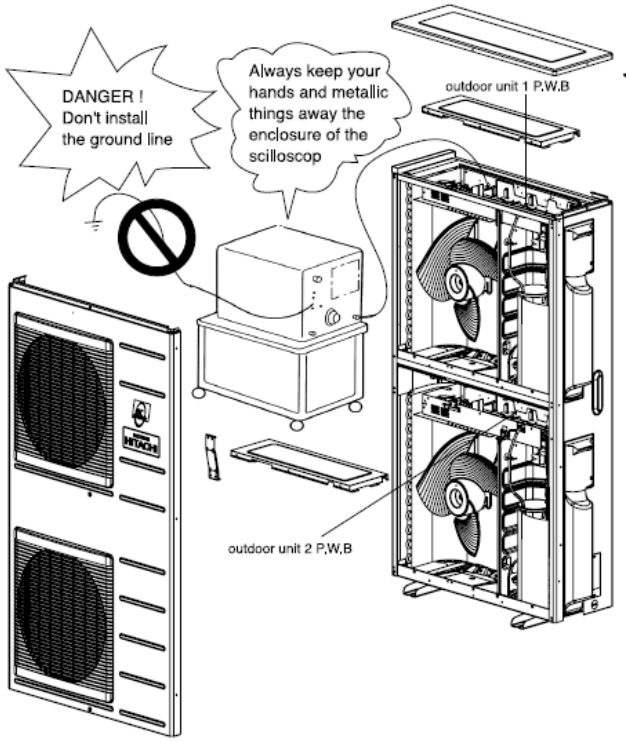

Across ⓐ–ⓑ (0V line) approx 260~360V
Across ⓐ–ground approx 155~170V
Across ⓑ (0V line)-ground approx 155~170V

14.1.5 MULTIZONE RAM-130NP6A

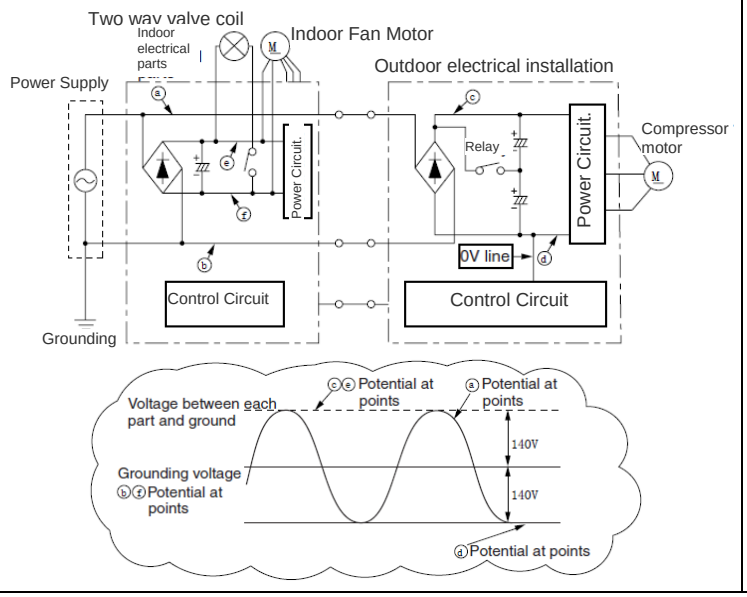

⚠Warning	⚠Warning
Remember that the 0V line is biased at 162V in reference to the ground level. Also note that it takes about 10 minutes until the voltage fall after the power switch is turned OFF.	When using an oscilloscope, never ground it. Don't forget that high voltage as noted in the left figure may apply to the oscilloscope.

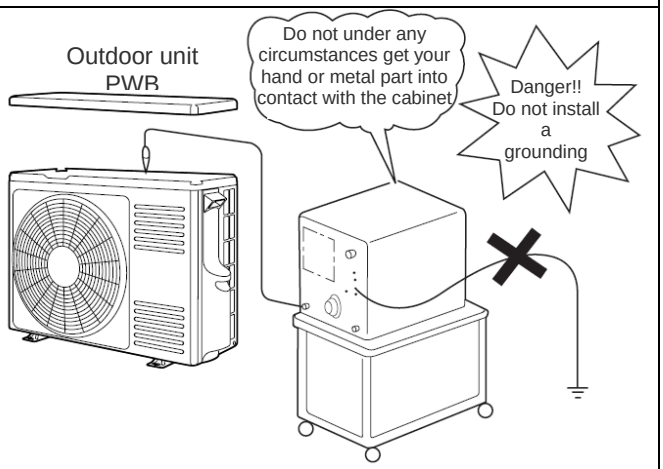

14.1.6 MONO SPLIT RAK-18/25/35PSA / RAC-18/25/35WSA , RAK-18/25/35PSAN / RAC-18/25/35WSAN , RAK-18/25/35PSPA / RAC-18/25/35WSPA

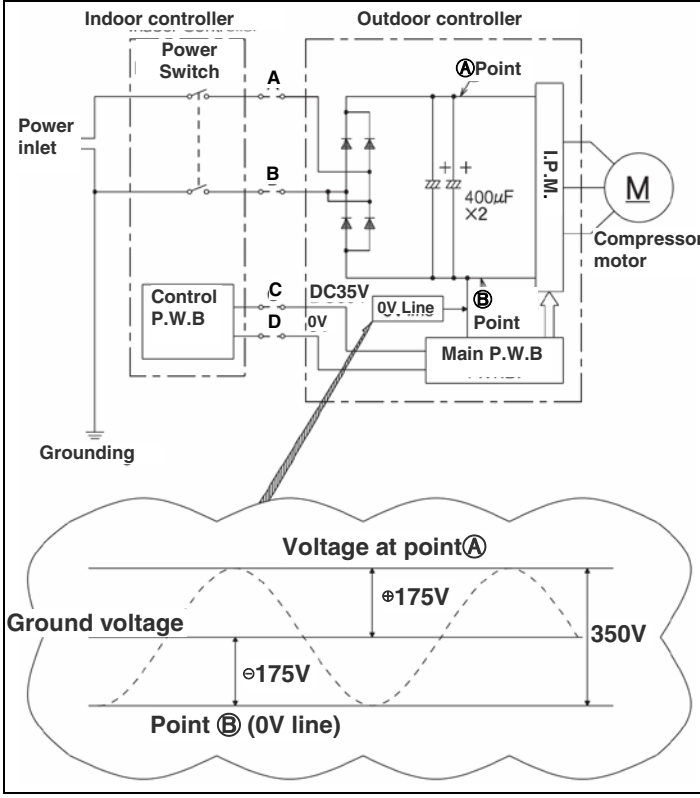

⚠Warning	⚠Warning
Remember that the 0V line on the outdoor electrical parts and the primary lower circuit of the indoor electrical parts have voltage to ground.	When using an oscilloscope, never ground it. Don't forget that high voltage as noted in the left figure may apply to the oscilloscope.

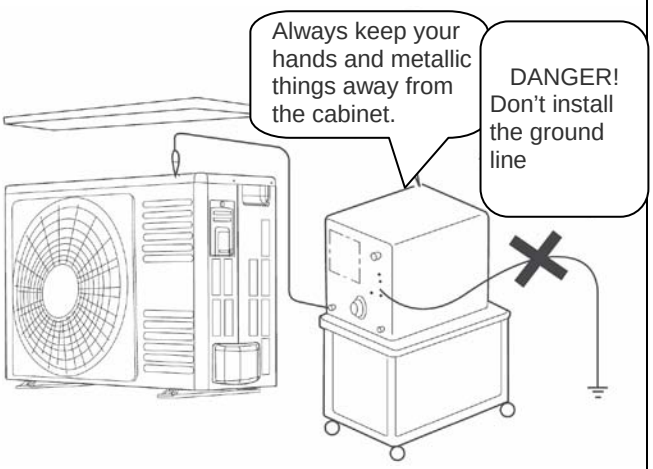

14.1.7 MONO SPLIT RAK-18/25/35PPA / RAC-18/25/35WPA , RAK-18/25/35/50PEA / RAC-18/25/35/50WEA , RAF-25/35RPA / RAC-25/35FPA

⚠Warning
Remember that voltage of 175V is applied to the 0V line on the P.W.B. or the like as shown in the diagram below

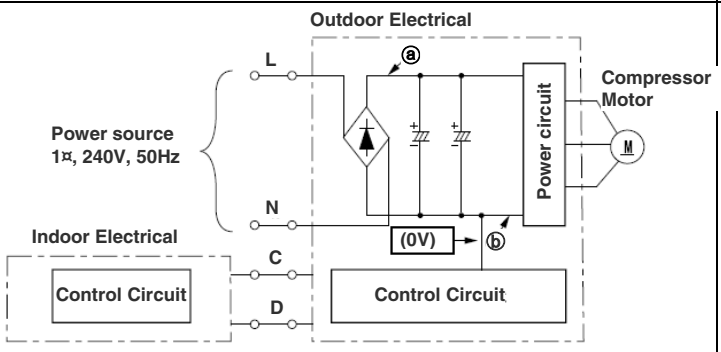

⚠Warning
When using an oscilloscope, never ground it. Don't forget that high voltage as noted in the left figure may apply to the oscilloscope.

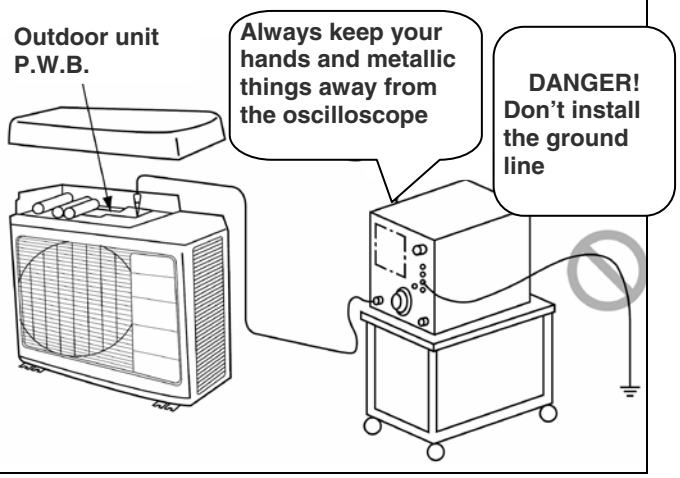

14.1.8 MONO SPLIT RAK-50/60/70PPA / RAC-50/60/70WPA

⚠Warning
Remember that voltage of 175V is applied to the 0V line on the P.W.B. or the like as shown in the diagram below

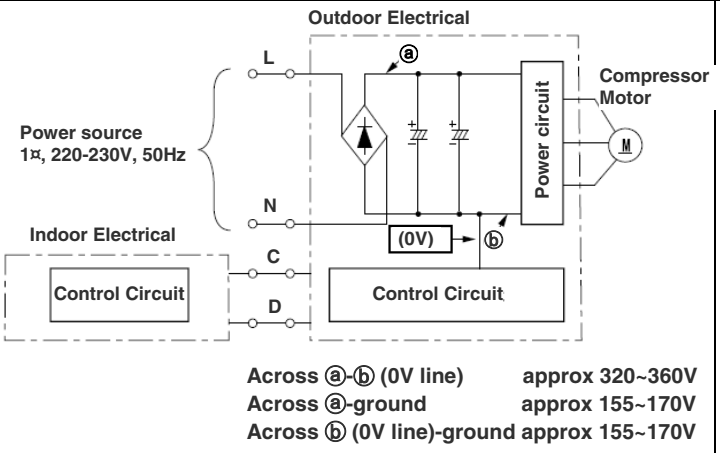

Across ⓐ-ⓑ (0V line) approx 320~360V
Across ⓐ-ground approx 155~170V
Across ⓑ (0V line)-ground approx 155~170V

⚠Warning
When using an oscilloscope, never ground it. Don't forget that high voltage as noted in the left figure may apply to the oscilloscope.

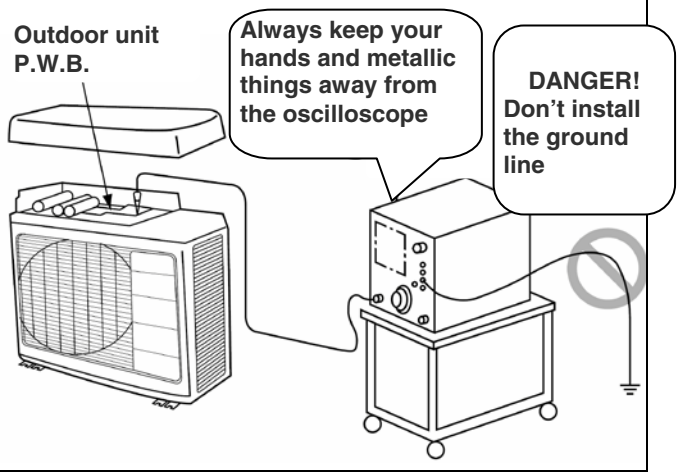

14.1.9 MONO SPLIT RAF-50RPA / RAC-50FPA

⚠Warning
Remember that the 0V line is biased to 320-360V in reference to the ground level.

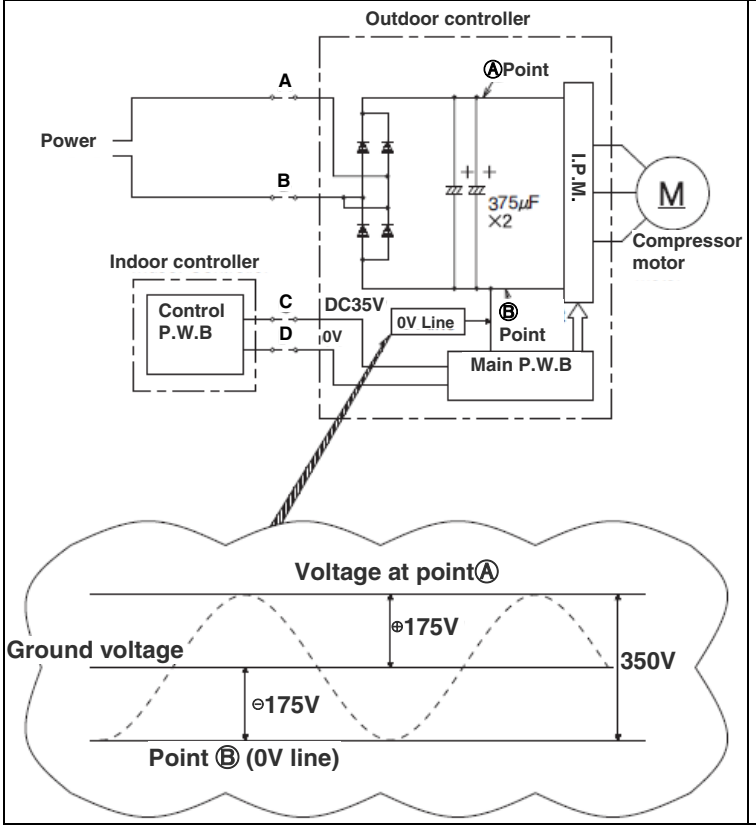

Across ⓐ-ⓑ (0V line) approx 320~360V
Across ⓐ-ground approx 155~170V
Across ⓑ (0V line)-ground approx 155~170V

⚠Warning
When using an oscilloscope, never ground it. Don't forget that high voltage as noted in the left figure may apply to the oscilloscope.

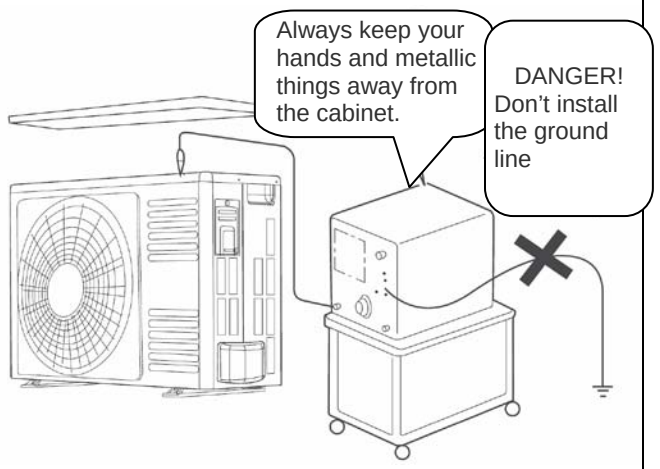

14.1.10 MONO SPLIT RAF-25/35PXA / RAC-25/35FXA

⚠Warning
Remember that voltage of 175V is applied to the 0V line on the P.W.B. or the like as shown in the diagram below

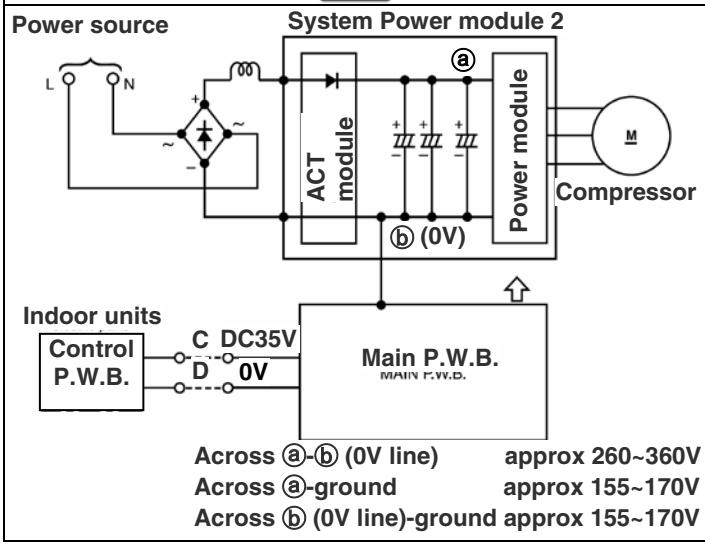

⚠Warning
When using an oscilloscope, never ground it. Don't forget that high voltage as noted in the left figure may apply to the oscilloscope.

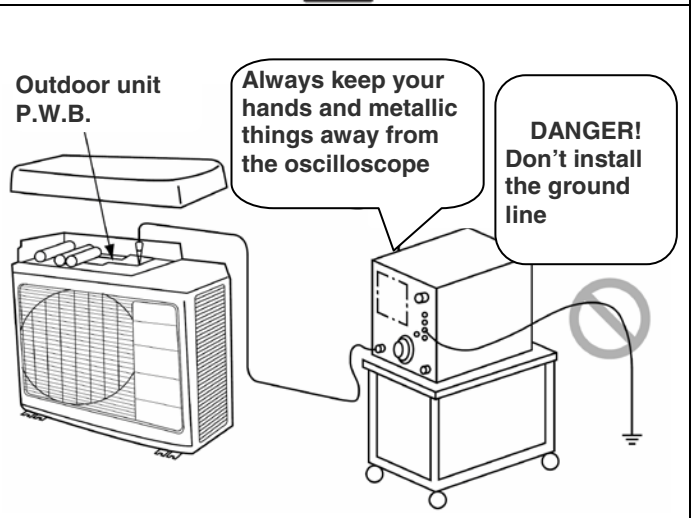

14.1.11 MONO SPLIT RAD-50/60/70PPA / RAC-50/60/70DPA

⚠Warning
Remember that voltage of 155-170V is applied to the 0V line on the P.W.B. or the like as shown in the diagram below

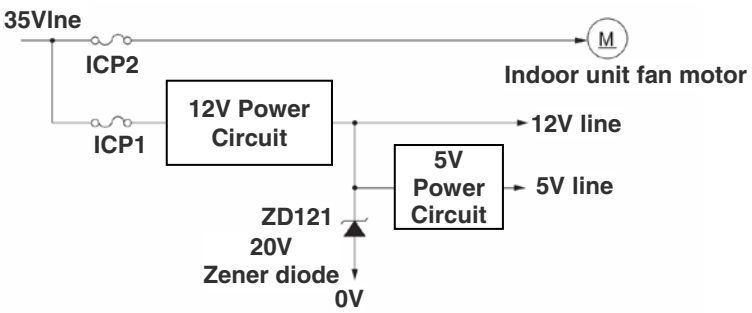

⚠Warning
When using an oscilloscope, never ground it. Don't forget that high voltage as noted in the left figure may apply to the oscilloscope.

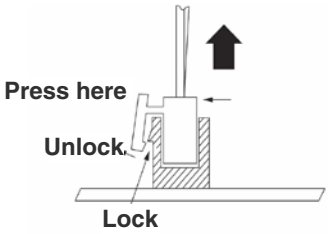

Other Cautions

1) Cautions concerning for short circuit in servicing.
   a) Use due caution to prevent short circuit in servicing. Short circuit wll immediately open the ICP.
   b) If the ICP is open, remove the causes and replace the ICP. If the remedy is improper, the ICP maybe blown again.

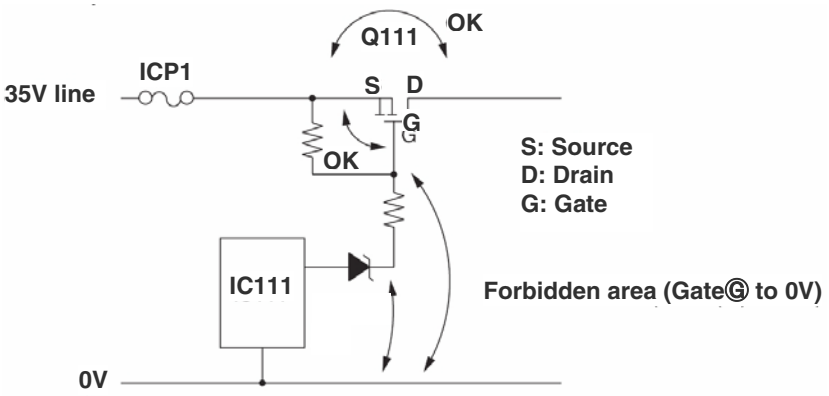

2) The CN3 (power supply) and CN10 (fan motor) are the connectors with lock mechanism. Press the lock with your fingers to unlock and remove the connector.

3) When checking the voltage and waveform, do not connect the probes to the forbidden areas shown below. Touching them may cause the ICP1 blowout and Q11 failure.

   The Q11 is a MOS-FET and its gate terminal is high impedance. When a probe such as multimeter is contacted with gate Ⓖ, the Q11 may have continuous ON state to supply overcurrent in the circuit causing the ICP1 blow out and Q111 failure.

   When checking the switching waveform of Q111, set the source Ⓢ to the base and measure the gate Ⓖ and drain Ⓓ.

4) During power feeding to the P.W.B., do not remove and insert the CN10 (fan motor connector). Failure to do so may cause overcurrent to the fan motor and P.W.B.s (microcomputer, IC and the like) and a failure may occur. To remove or insert the CN10, be sure to shut off the power.

14.2 DISCHARGE PROCEDURE AND POWER SHUT OFF METHOD FOR POWER CIRCUIT

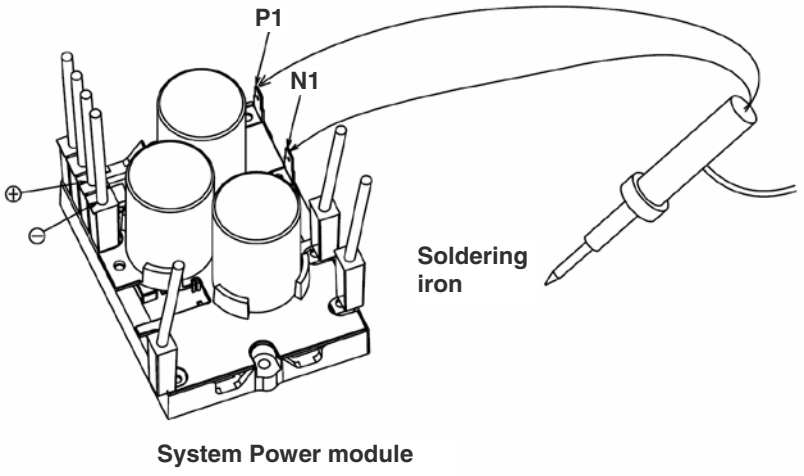

⚠**Warning**⚠
Caution

- Voltage of about 350V is charged between the terminals of smoothing capacitors.
- High voltage (DC360V) is also charged at terminals of ACT module and power module
- During continuity check for each circuit part of the outdoor unit, be sure to discharge the smoothing capacitors

14.2.1 MONOZONE RAC-25NPA / 35NPA / 50NPA & MULTIZONE RAM-36NP2A / 53NP2A / 53NP3A / 68NP3A / 70NP4A / 130NP6A & MONO SPLIT RAF-50PXA / RAC-50FXA, RAD-50/60/70PPA / RAC-50/60/70DPA

Disharge Procedure

1. Turn off the power supply to the outdoor unit.
2. After power is turned off, wait for 10 minutes or more. Then remove the electrical parts cover and apply soldering iron of 30 to 75W for 15 seconds or more to P1 and N1 terminals on system power module, in order to discharge voltage in smoothing capacitor
3. Remove receptacle of red/gray lead wire connected to system power module from diode stack before performing operation check of each circuit.

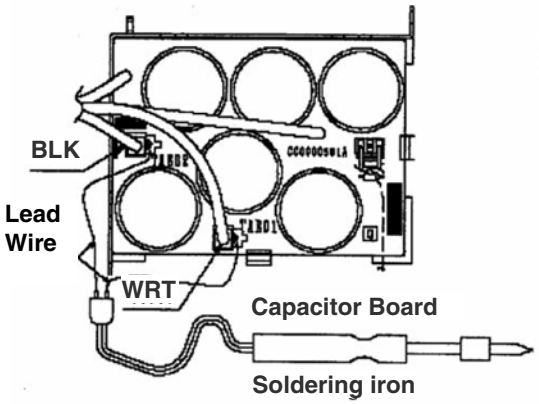

As shown above, apply soldering iron to metal parts (receptacle) inside the sleeve corresponding to P1 and N1 terminals of system power module. Do this with smoothing capacitors kept connected. By removing red/gray lead wire from diode stack, power supply can be shut off (corresponding to (+) and (-).

Do no use a soldering iron with transformer: If one is used, thermal fuse inside transformer will be blown.

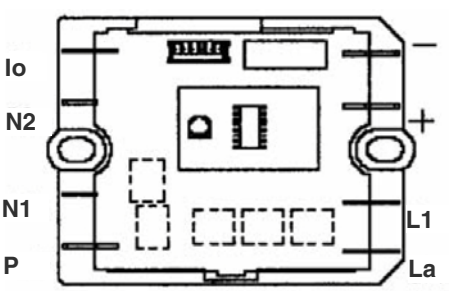

14.2.2 MULTIZONE RAM-90NP5A

Disharge Procedure

1. Turn off the power supply to the outdoor unit and disconnect the power plug.
2. Wait for 10 minutes or more after power is turned off and then remove electrical parts box lid as shown below. Apply soldering iron of 30~75W for 15 seconds or more at P1 and N1 black/white lead receptacles on Capa board to discharge voltage from smoothing capacitor. Do not loosen or remove screws of intelligent power module: If screw is loose, voltage will not be discharged.
3. Before operation check on each part of circuit, remove receptacle of red/gray lead connected to ACT module from diode stack.
4. As shown left, apply soldering iron to metal parts TAB 01 P and TAB 02 terminals of Capa board.

Do no use a soldering iron with transformer: If one is used, thermal fuse inside transformer will be blown.

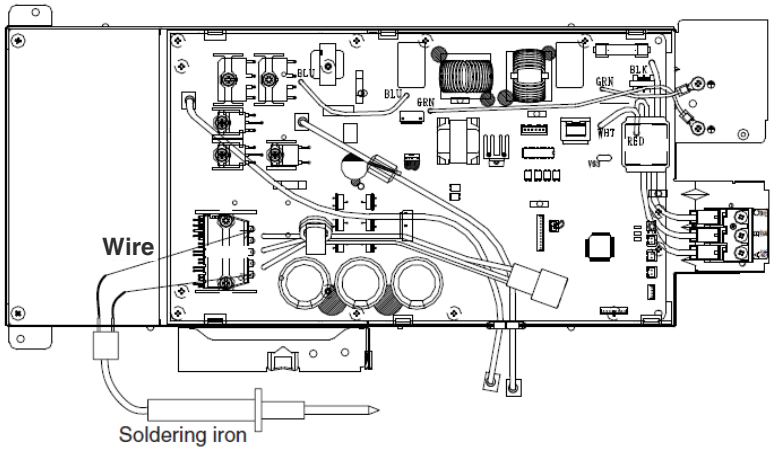

14.2.3 MONO SPLIT RAK-18/25/35PSA / RAC-18/25/35WSA, RAK-18/25/35PSAN / RAC-18/25/35WSAN , RAK-18/25/35PSPA / RAC-18/25/35WSPA

Disharge Procedure

1. Turn off the power of the indoor/outdoor unit and pull out the power supply plug.
2. After power is turned off, wait for 15 minutes or more. Then remove the electrical parts cover and apply soldering iron of 30 to 75W at the positive and negative terminals of IPM, and discharge the charge voltage of the smoothing capacitor.

Applicable models : RAK-18/25/35PSA / RAC-18/25/35WSA, RAK-18/25/35PSAN / RAC-18/25/35WSAN , RAK-18/25/35PSPA / RAC-18/25/35WSPA

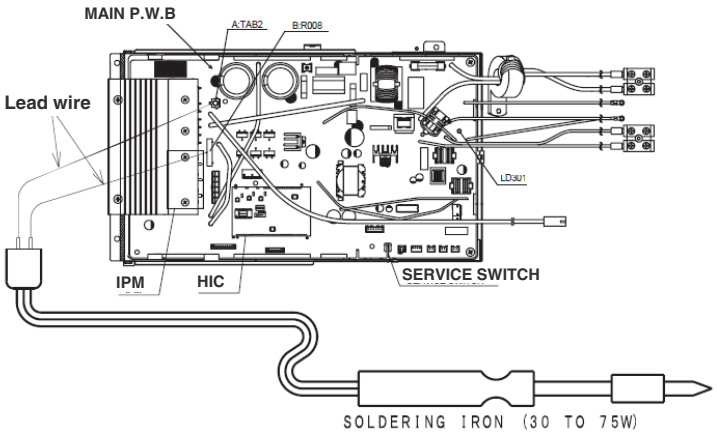

Do no use a soldering iron with transformer: If one is used, thermal fuse inside transformer will be blown.

14.2.4 MONO SPLIT RAK-18/25/35PPA / RAC-18/25/35WPA, RAK-18/25/35/50PEA / RAC-18/25/35/50WEA , RAF-25/35PXA / RAC-25/35FXA RAF-50RPA / RAC-50FPA

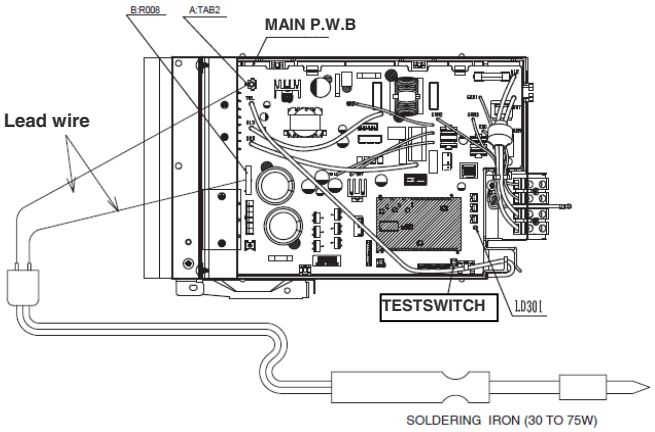

Disharge Procedure

1. Turn off the power of the indoor/outdoor unit and pull out the power supply plug.
2. After power is turned off, wait for 10 minutes or more. Then remove the electrical parts cover and apply soldering iron of 30 to 75W for 15 seconds or more to TAB05 and R001 terminals on the main P.W.B. as shown in the figure below. In order to discharge voltage in smoothing capacitor

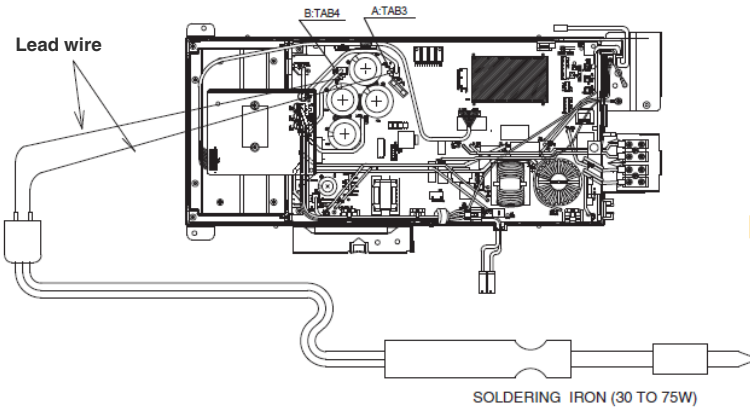

- **Applicable models : RAK-18/25PPA / RAC-18/25WPA, RAK-18/25PEA / RAC-18/25WEA**

- **Applicable models : RAK-35PPA / RAC- 35WPA, RAK-35PEA / RAC- 35WEA, RAF-25/35PXA / RAC-25/35FXA**

- **Applicable models : RAK-50PEA / RAC-50WEA , RAF-50RPA / RAC-50FPA**

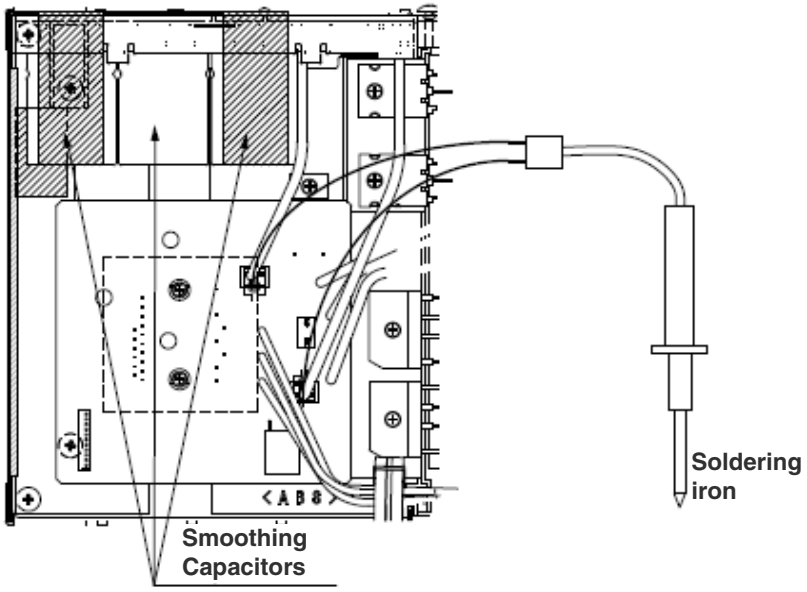

Do not use a soldering iron with transformer: Otherwise, thermal fuse inside transformer will be blown.

14.2.5 MONO SPLIT RAK-50/60/70PPA / RAC-50/60/70WPA

Disharge Procedure

1. Turn off the power supply to the outdoor unit.
2. After power is turned off, wait for 10 minutes or more. Then remove the electrical parts cover and apply soldering iron of 30 to 75W for 15 seconds or more to (+) and (-) terminals on system power module, in order to discharge voltage in smoothing capacitor

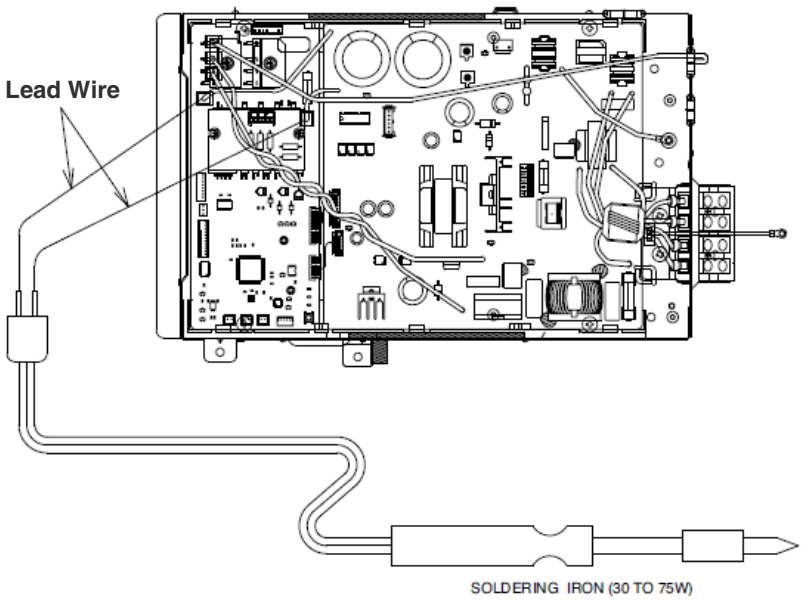

As shown beside, apply soldering iron to metal parts (receptacle) inside the sleeve corresponding to P1 and N1 terminals of system power module. Do this with smoothing capacitors kept connected. By removing red/gray lead wire from diode stack, power supply can be shut off (corresponding to (+) and (-).

Do no use a soldering iron with transformer: If one is used, thermal fuse inside transformer will be blown.

14.2.6 MONO SPLIT RAF-25/35RPA / RAC-25/35FPA

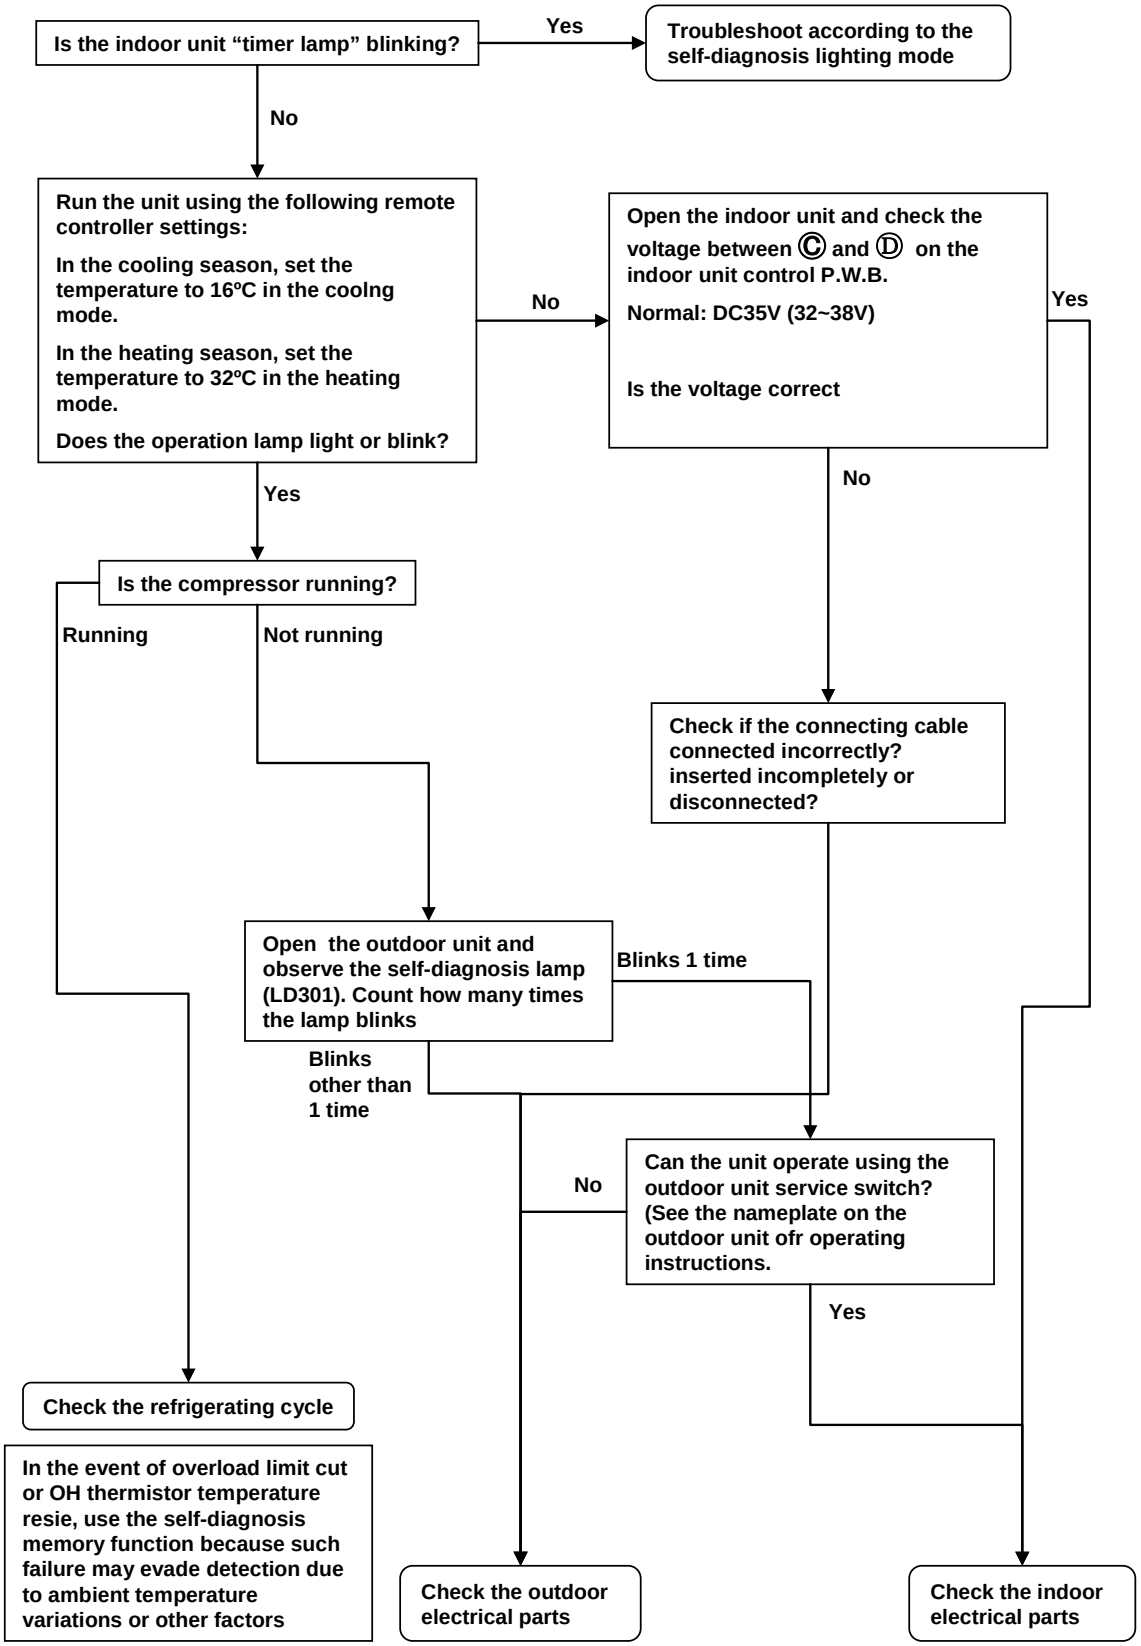

Disharge Procedure

1. Turn off the power of the indoor unit or pull out the power supply plug.
2. After power is turned off, wait for 10 minutes or more. Then remove the electrical parts cover and apply soldering iron of 30 to 75W for 15 seconds or more to TAB3 (GRAY) and TAB4 (RED) terminals on the main P.W.B, in order to discharge voltage in smoothing capacitor

Do no use a soldering iron with transformer: If one is used, thermal fuse inside transformer will be blown.

14.3 PRELIMINARY CHECK ON INDOOR/OUTDOOR UNIT ELECTRICAL PARTS AND REFRIGERATING

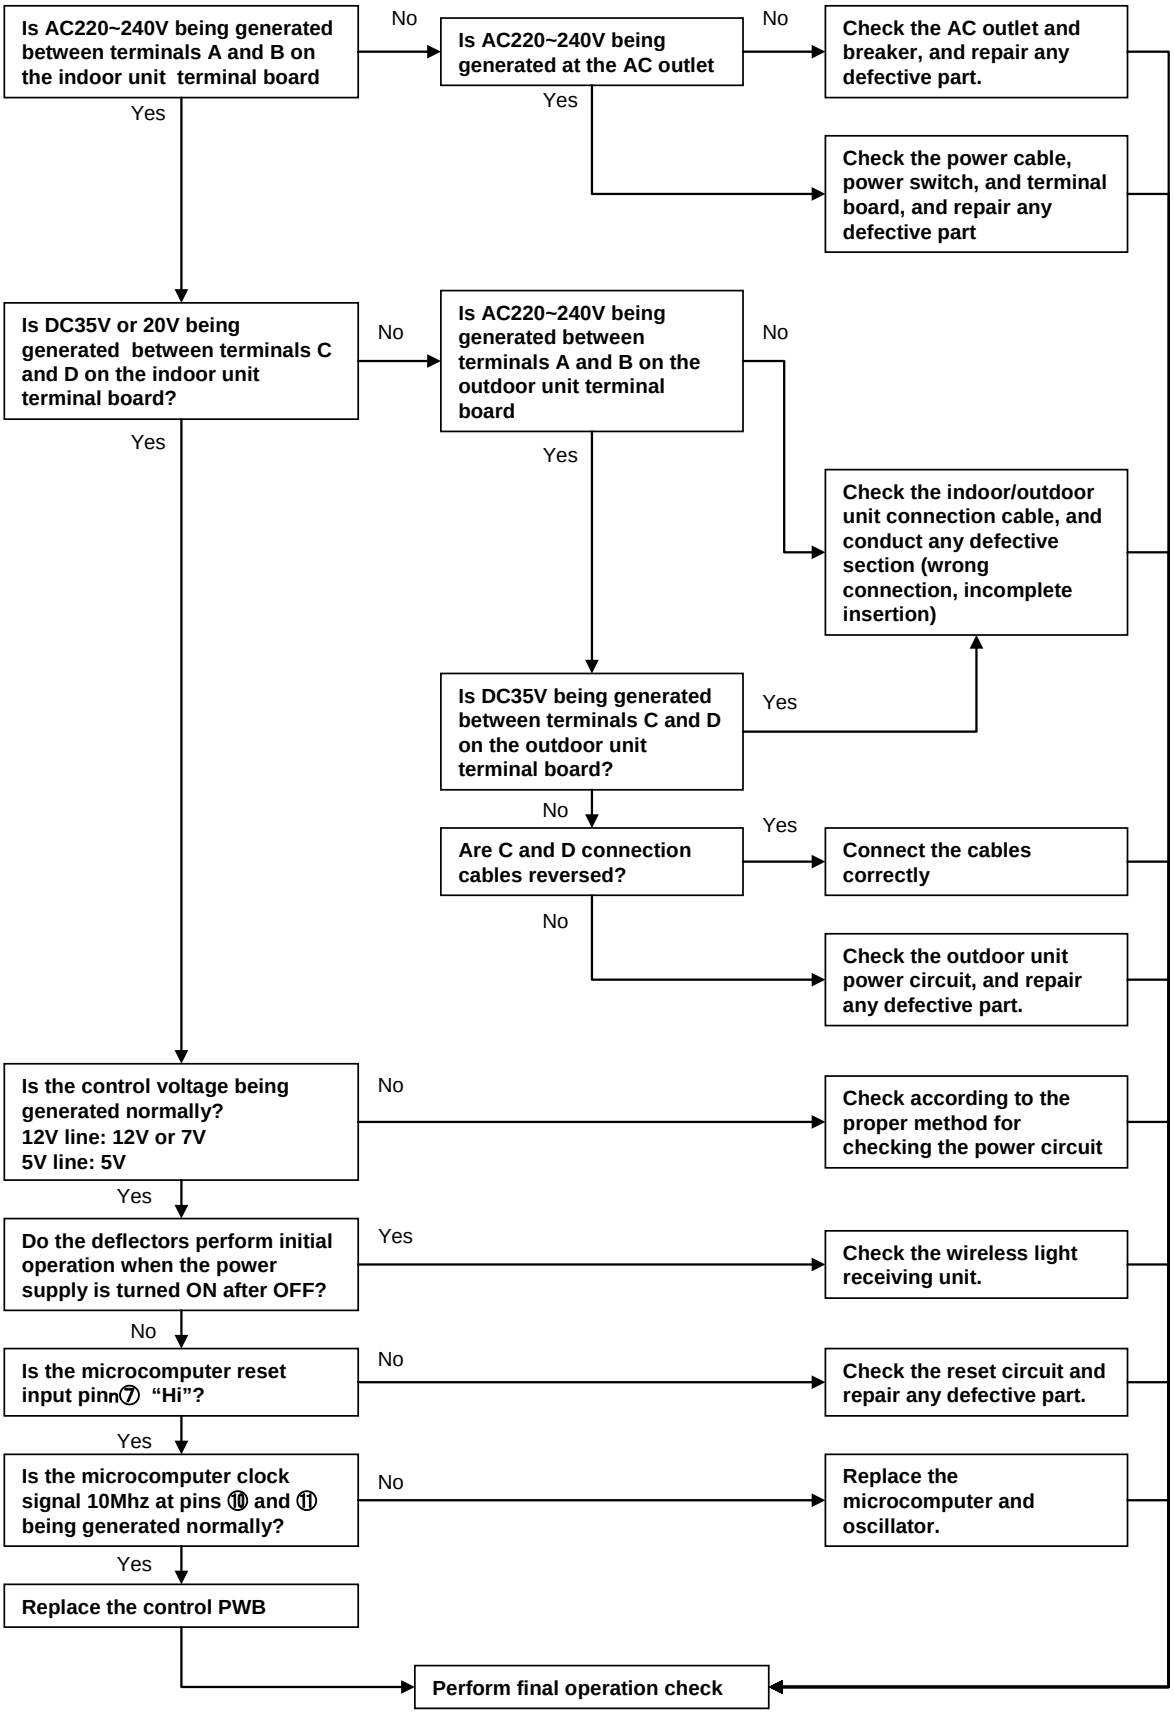

14.3.1 SUPPORT FUNCTION OF FAILURE DIAGNOSIS

No.	Function Name	Description
1	Self-diagnosis function <indicating a failure on the indoor unit>	• The “timer lamp indicates a mode of failure detected on the indoor or outdoor unit side by blinking frequency. • A failure detected on the outdoor unit side will be indicated by the “timer lamp” blinking 4 times after a retry operation has been performed several times. Note: In some failure modes, only the retry operation is repeated without lamp indication. <Failure modes that will repeat a retry operation without the indoor unit lamp indication are as follow :> OH thermistor temperature rise Outdoor unit communication error. Power voltage abnormal Less frequent defects.
	<Indicating a failure on the outdoor unit>	• The “LD301” indicates a mode of failure detected on the outdoor unit side by the blinking frequency. Upon failure detection, the outdoor unit will shut down and the LD301 continues to blink until the unit is reset. (In the event of communication errors, the LD301 continues to blink until communication is restored)

14.4 CHECKING THE INDOOR UNIT ELECTRICAL PARTS

14.4.1 NO POWER IS DETECTED (NO OPERATION)

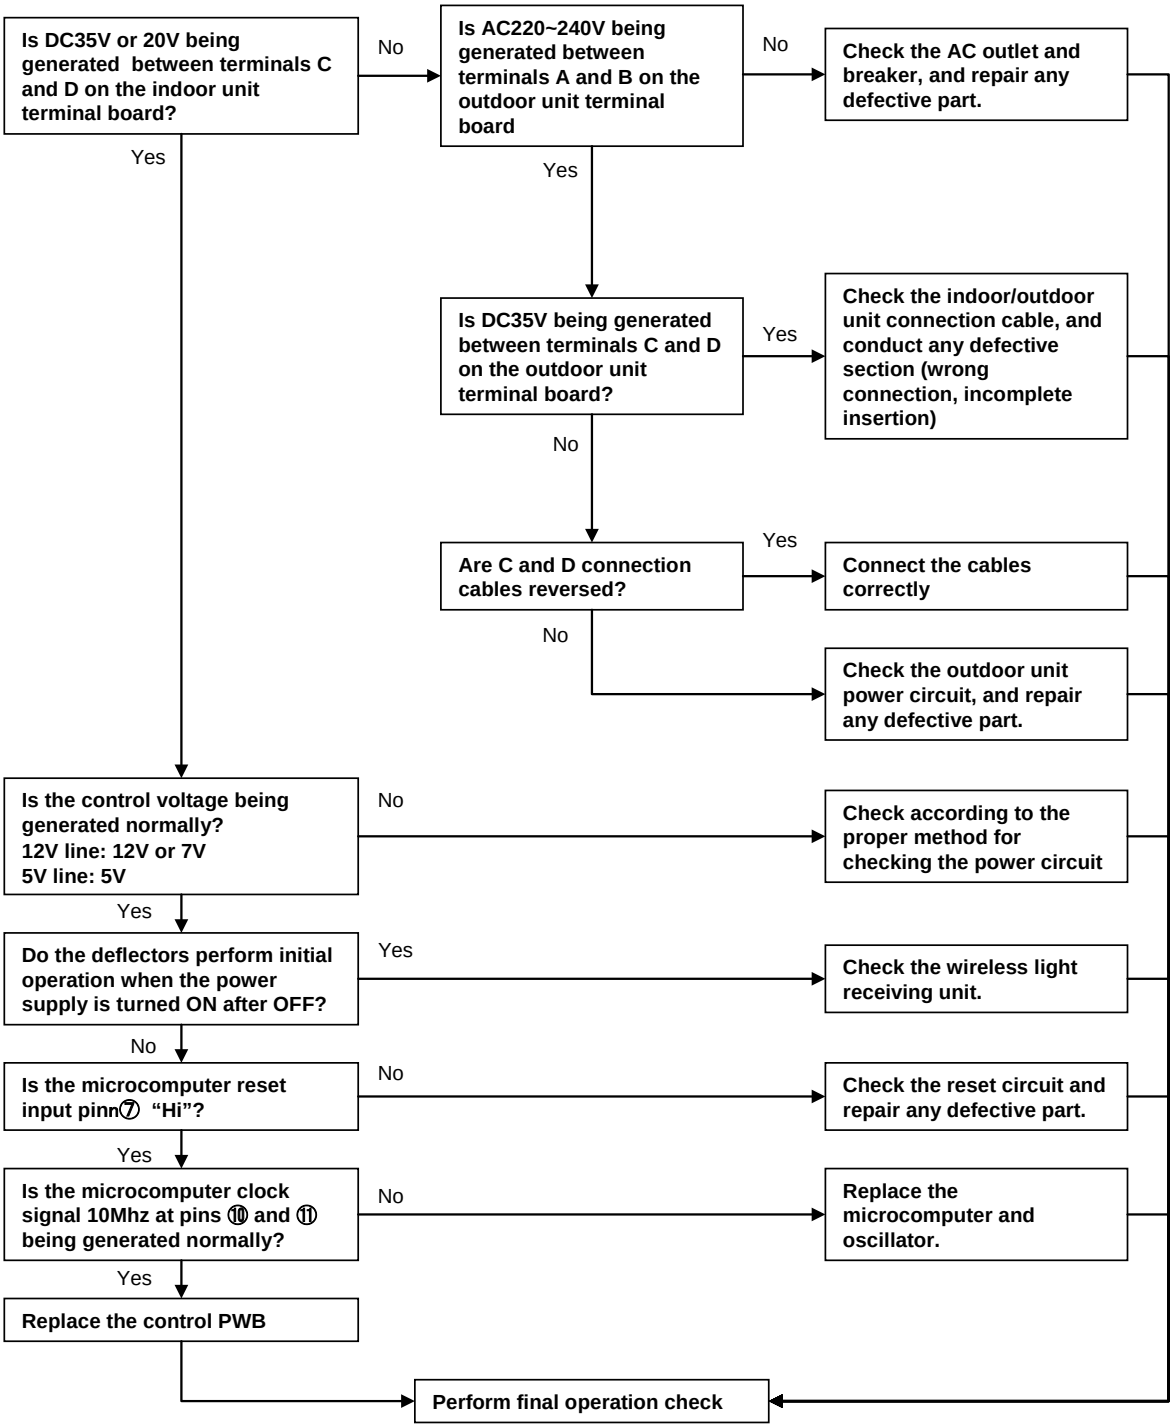

14.4.1.1 MONO SPLIT

※1: When not in operation, the unit will enter into a low power standby state, possibly causing a voltage drop to the 12V and 35V lines as shown

25V~20V
12V~7V

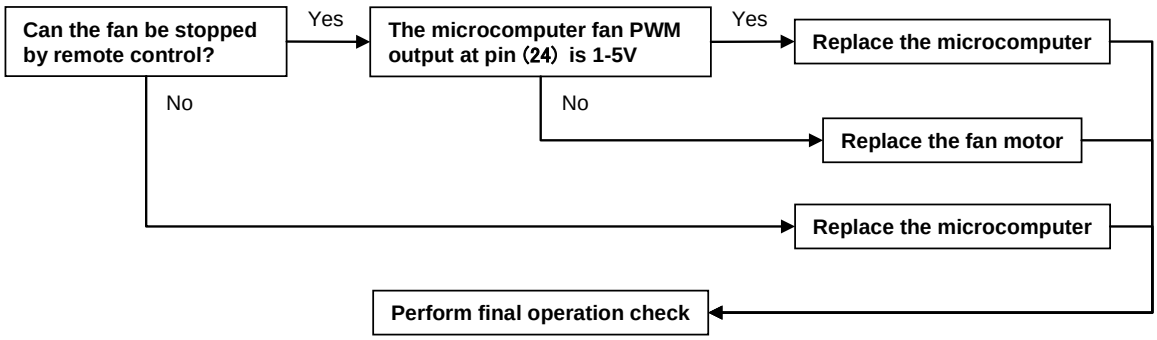

14.4.1.2 MONOZONE / MULTIZONE / MONO SPLIT

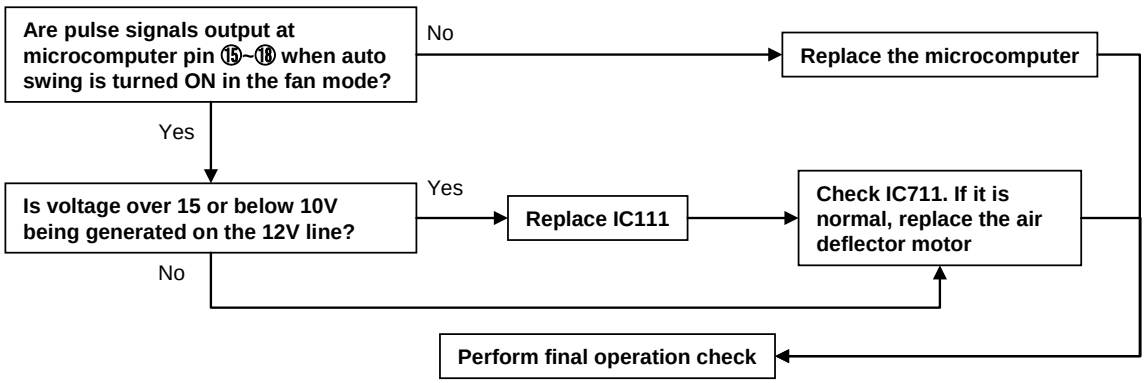

※1: When not in operation, the unit will enter into a low power standby state, possibly causing a voltage drop to the 12V and 35V lines as shown

25V~20V
12V~7V

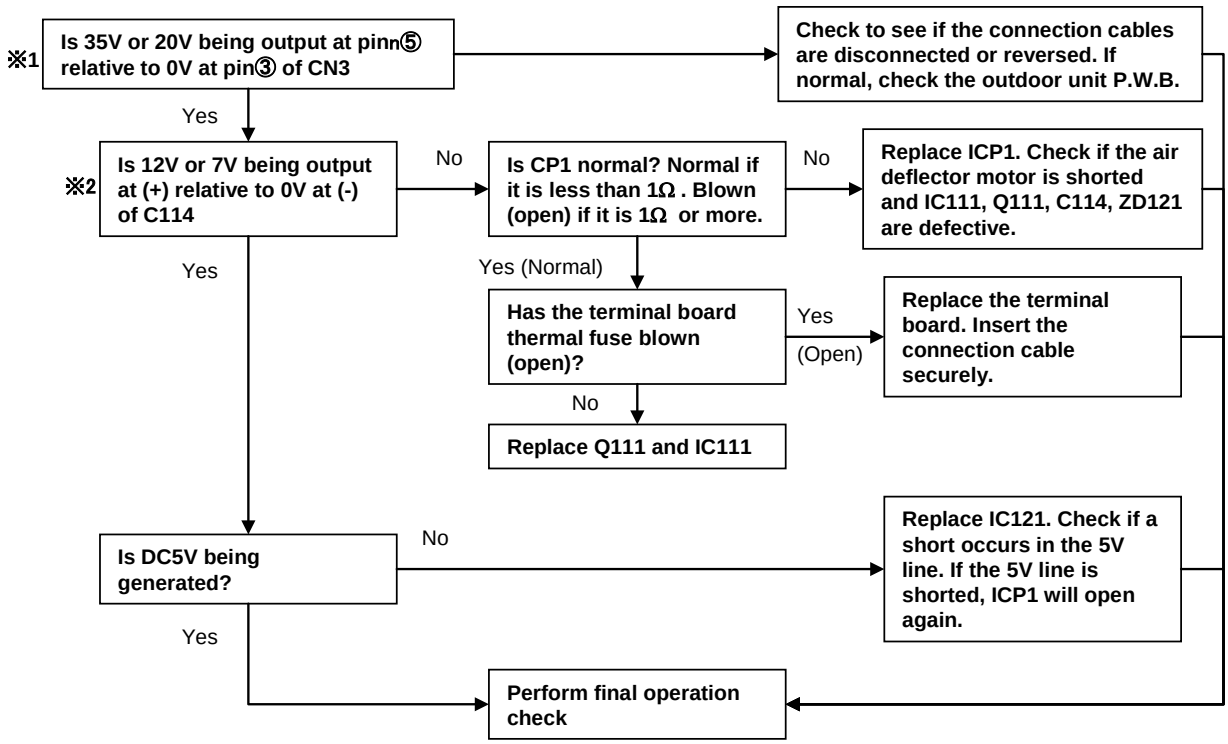

14.4.2 INDOOR FAN DOES NOT OPERATE (OTHERS ARE NORMAL) – RAK-25/35/50PXA, RAK-18/25/35/50/70PPA, RAK-18/25/35/50PEA, RAF-25/35/50RPA, RAF-25/35/50PXA, RAD-50/60/70PPA

14.4.3 AIR DEFLECTOR DOES NOT MOVE (OTHERS ARE NORMAL)

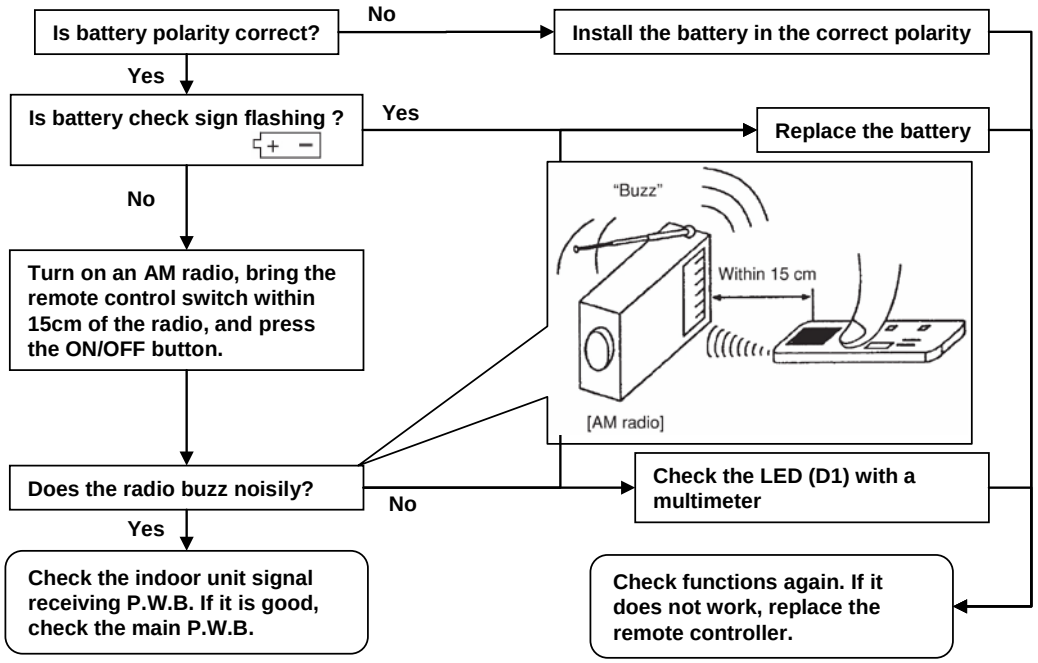

14.4.4 CHECK THE CONTROL P.W.B. (POWER CIRCUIT) – RAK-25/35PXA, RAK-18/25/35PPA, RAK-18/25/35/50PEA, RAF-25/35/50RPA, RAF-25/35PXA

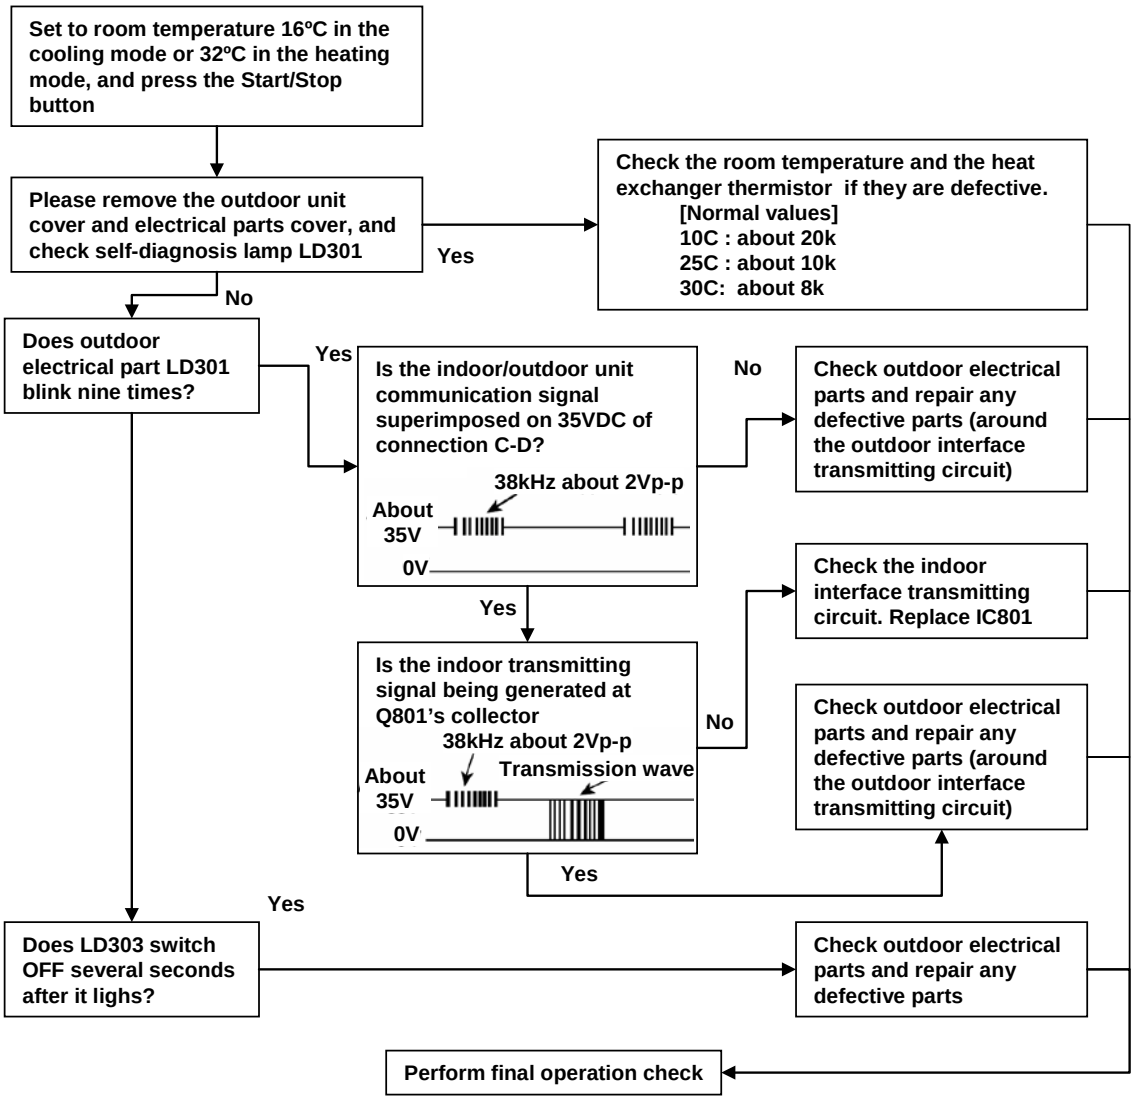

※**1**: When the unit is not in operation, the voltage across the 35V line may drop to 20V
※**2**: When the unit is not in operation, the voltage across the 12V line may drop to 7V

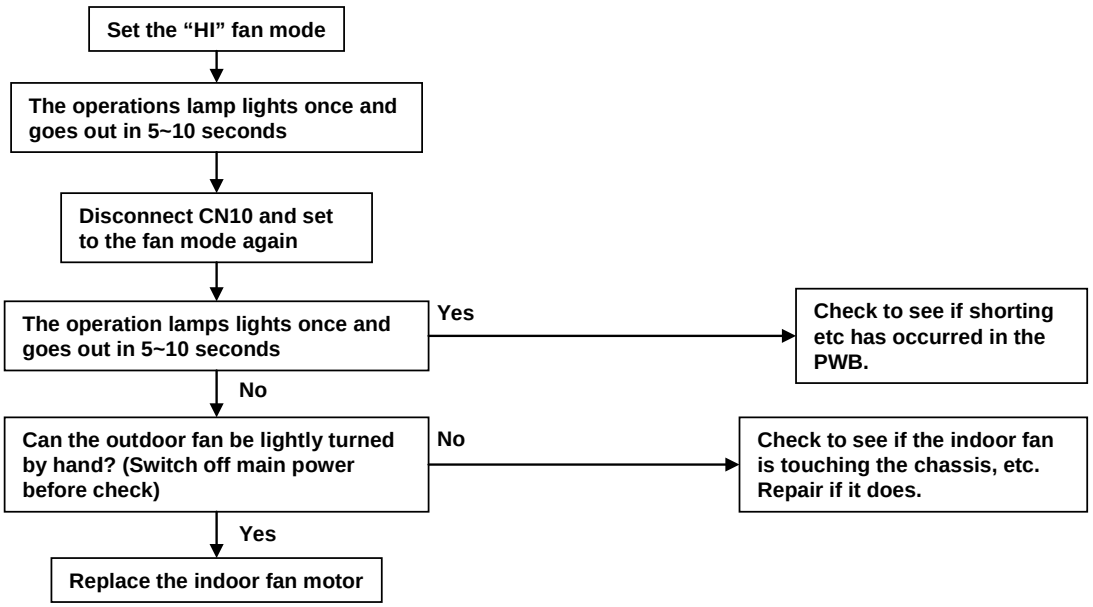

14.4.5 CHECKING THE REMOTE CONTROLLER

14.4.6 OUTDOOR UNIT DOES NOT OPERATE (BUT RECEIVES REMOTE INFRARED SIGNAL)

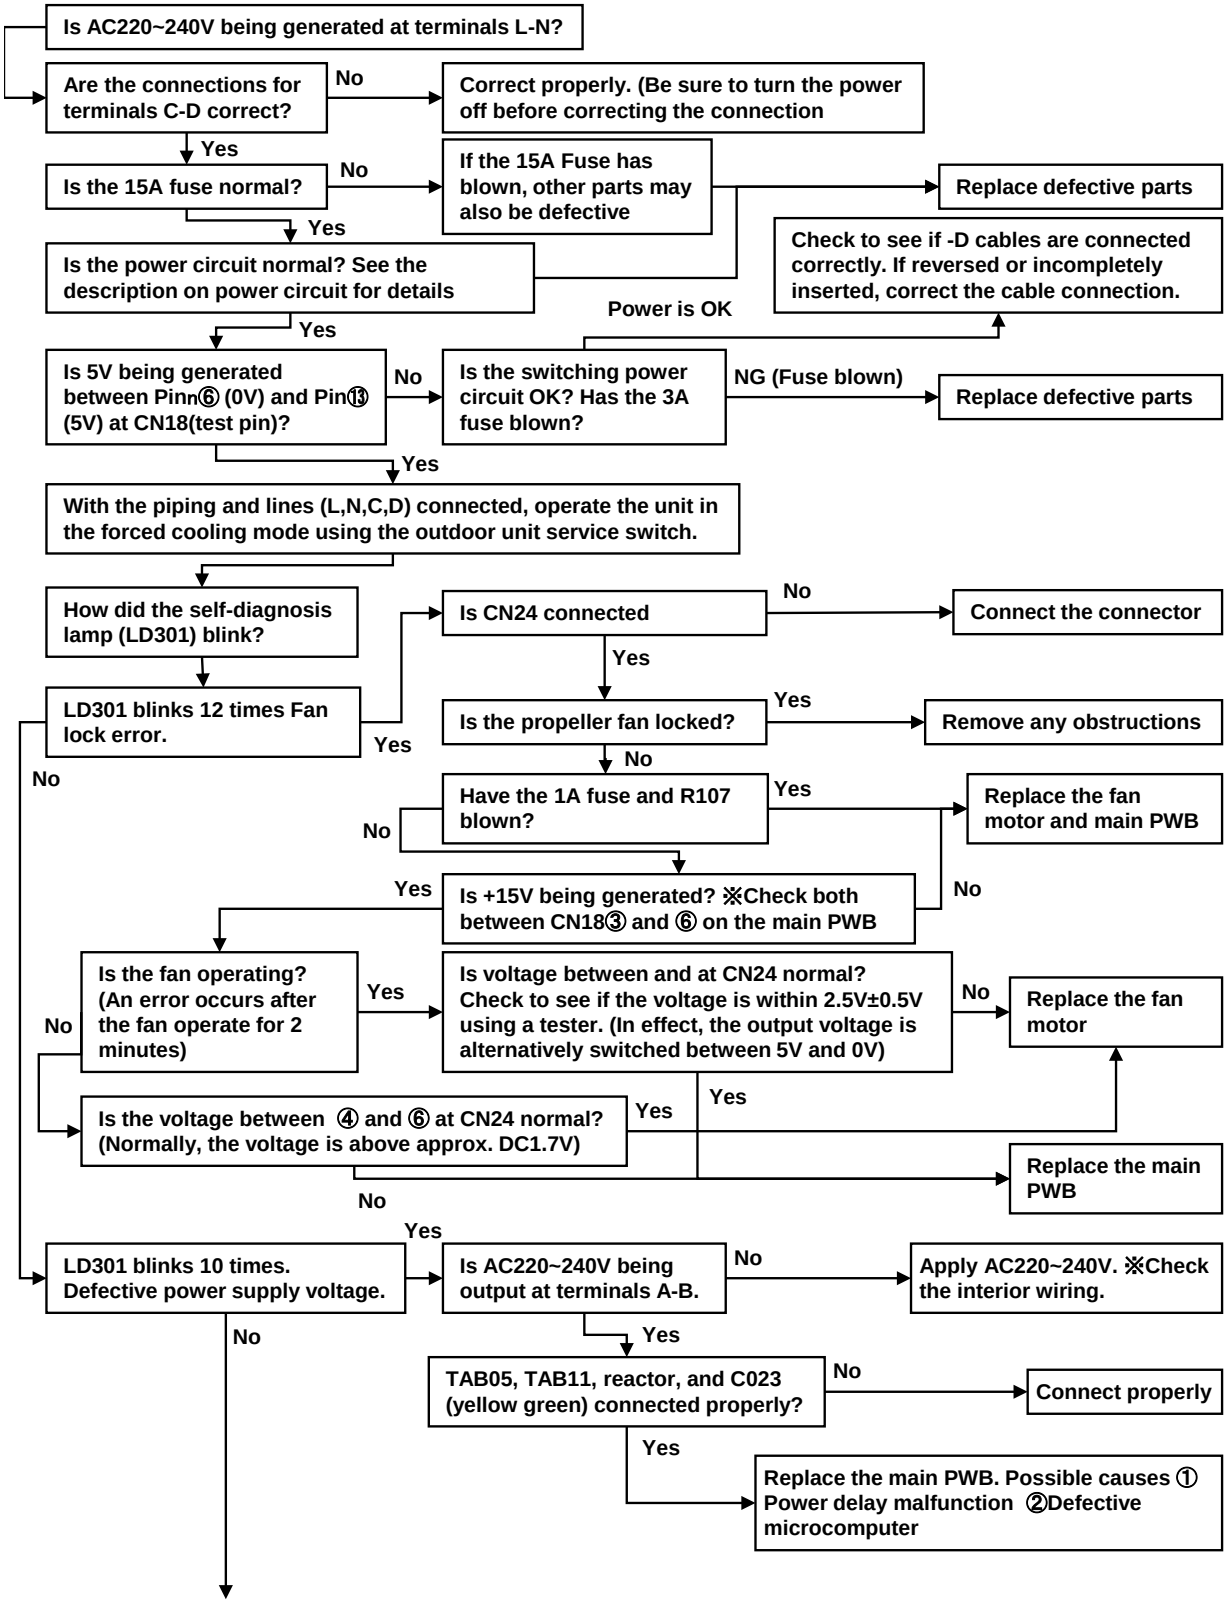

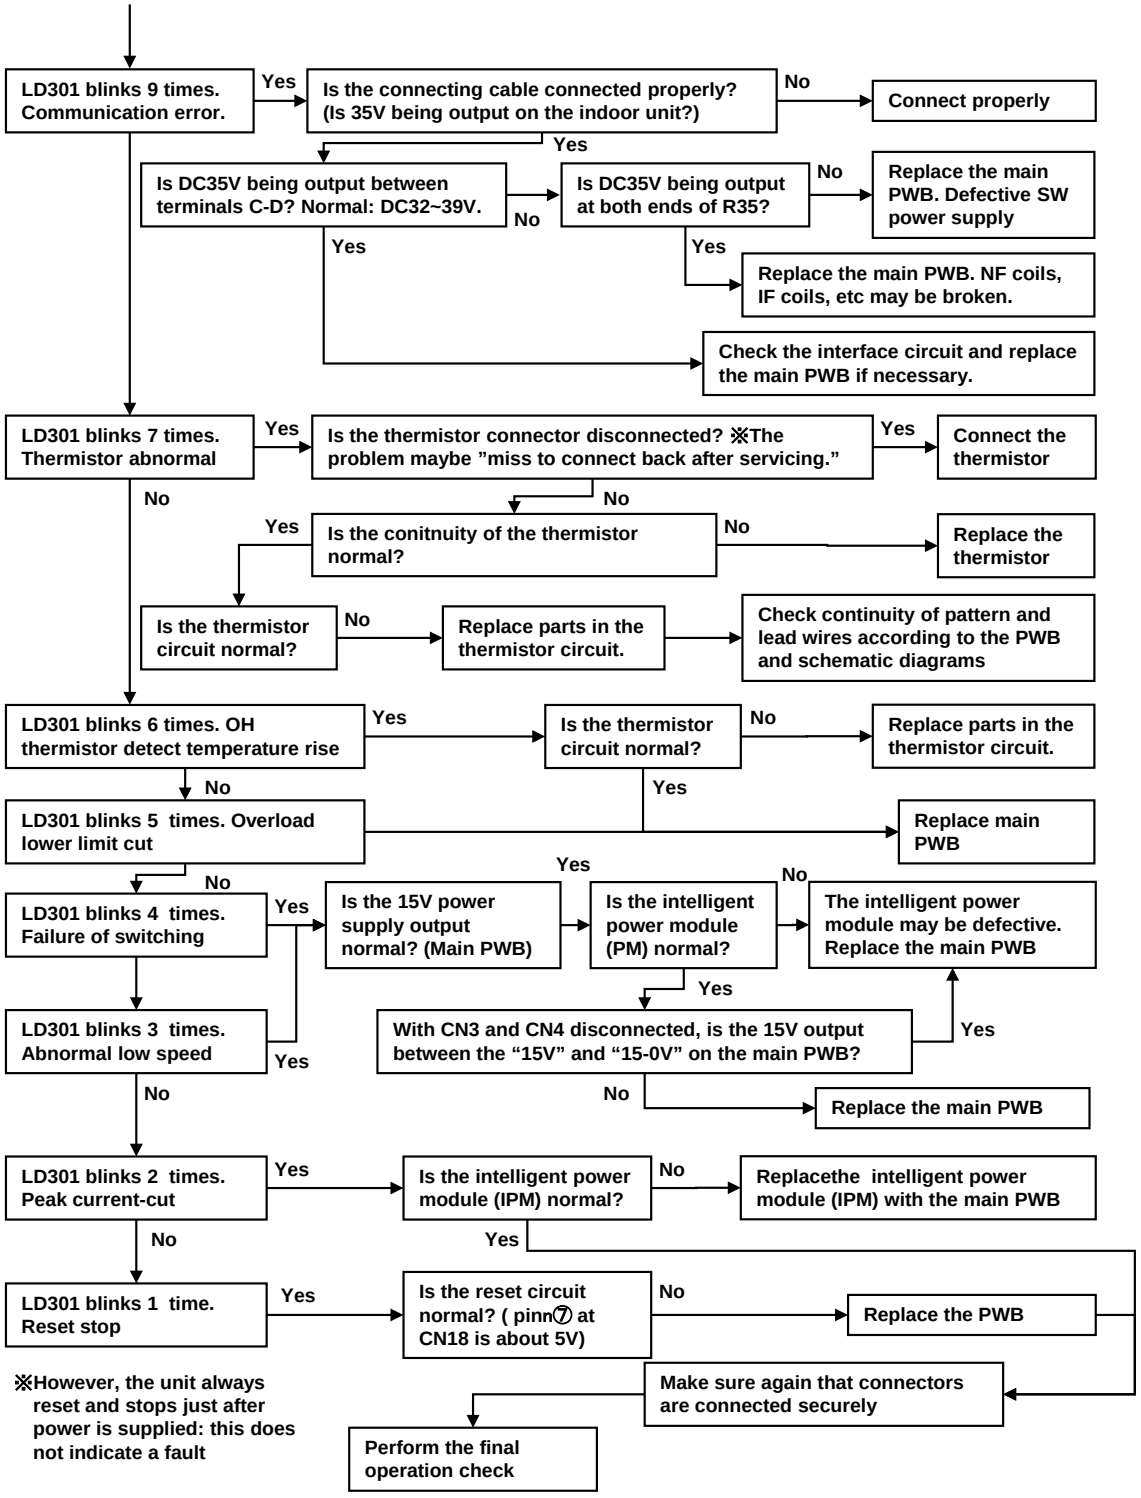

14.4.7 ALL SYSTEMS STOP FROM SEVERAL SECONDS TO SEVERAL MINUTES AFTER OPERATION IS STARTED (ALL INDICATORS ARE ALSO OFF)

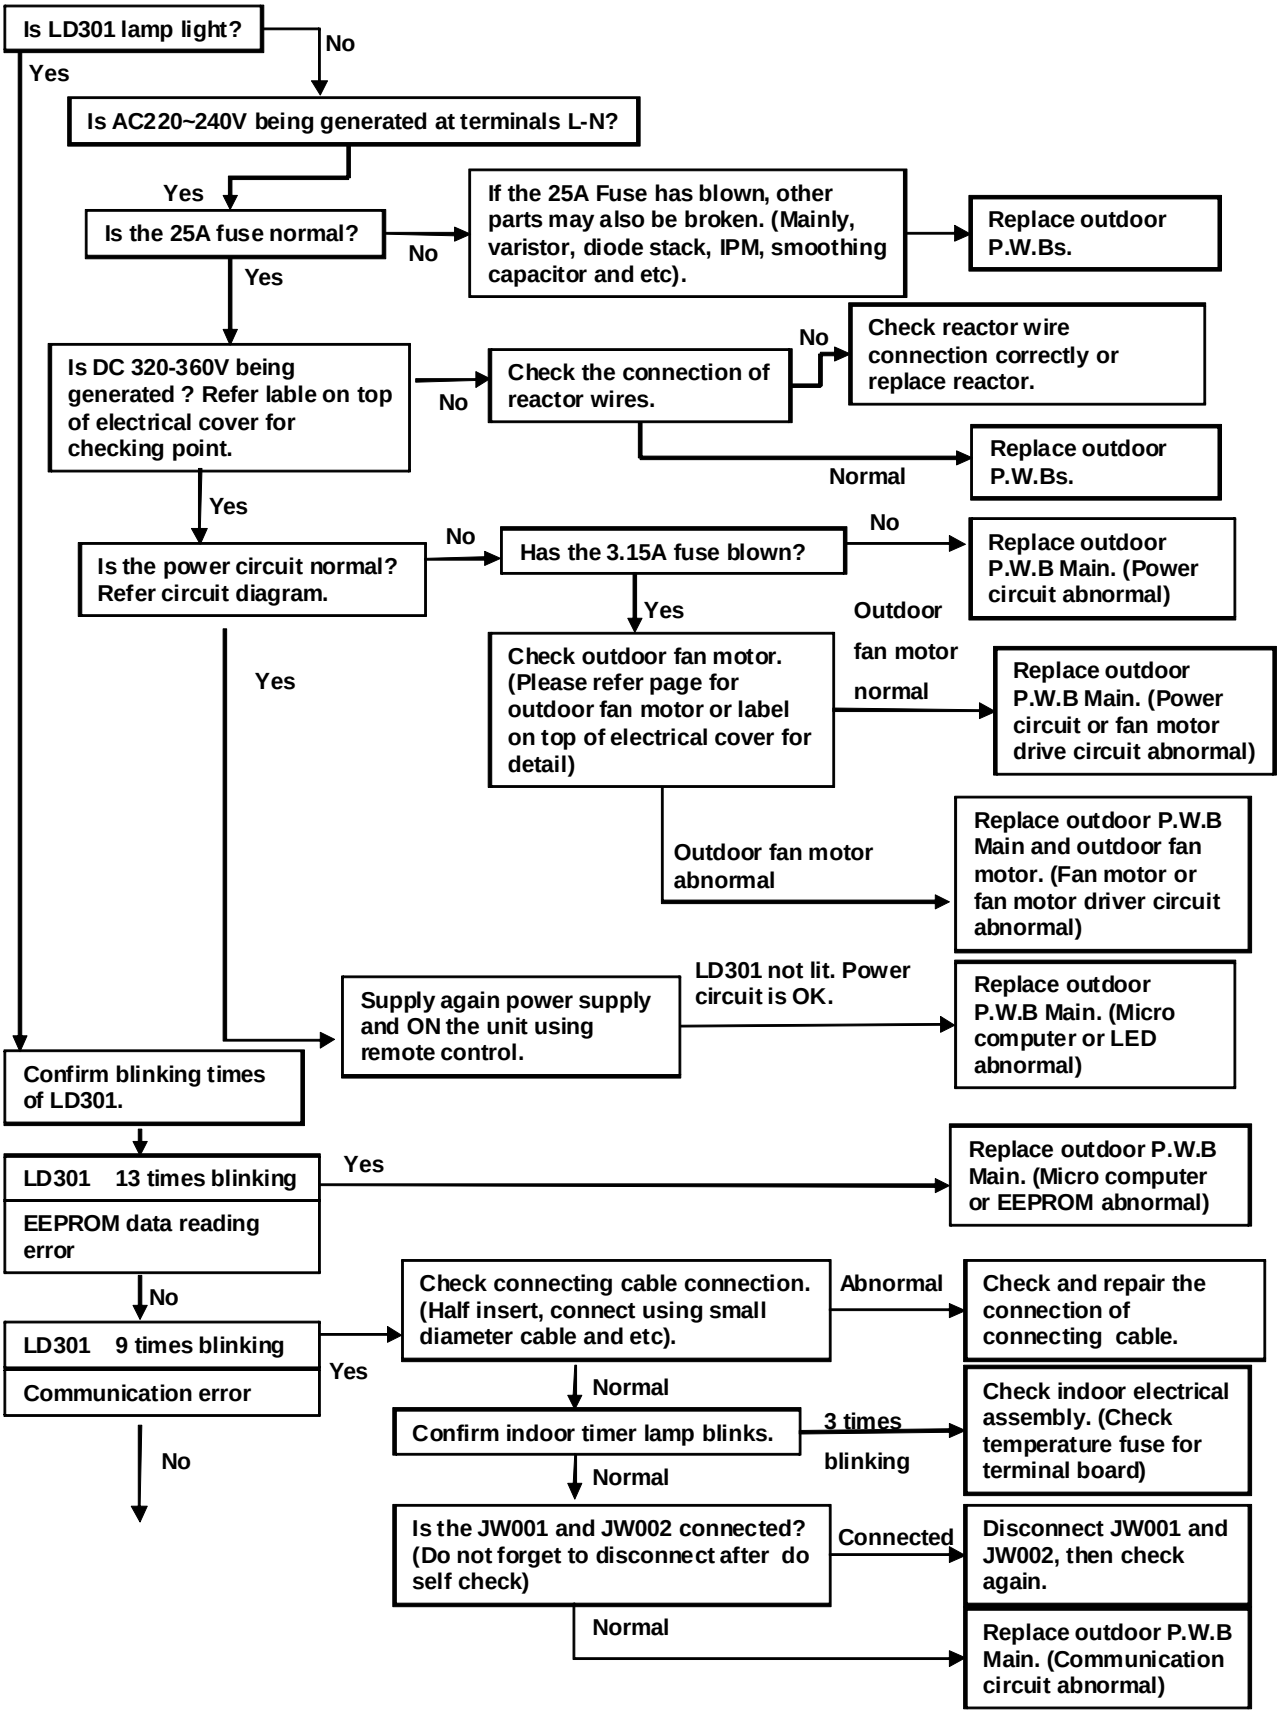

14.5 CHECKING OUTDOOR UNIT ELECTRICAL PARTS

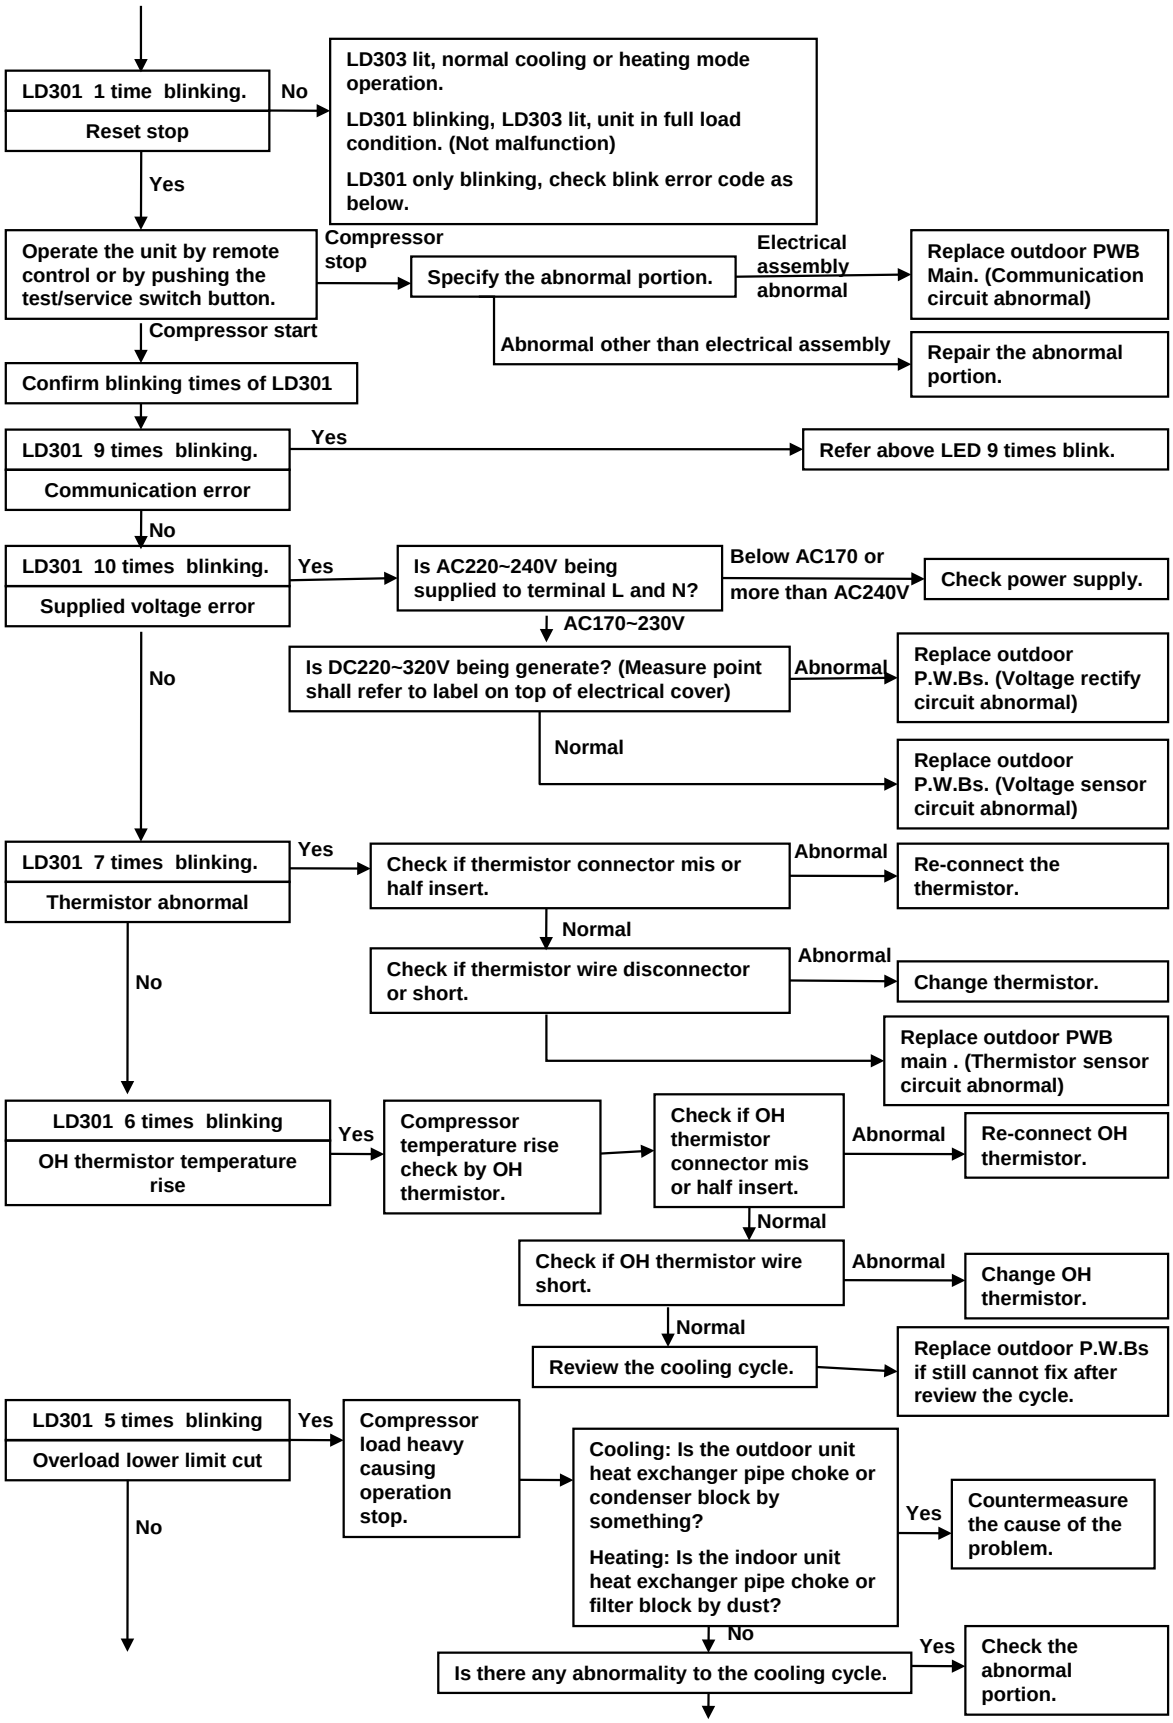

14.5.1 NO OPERATION OR ABNORMAL OPERATION (RAC-18/25/35WPA, RAC-18/25/35/50WEA, RAC-25/35FPA, RAC-25/35FXA

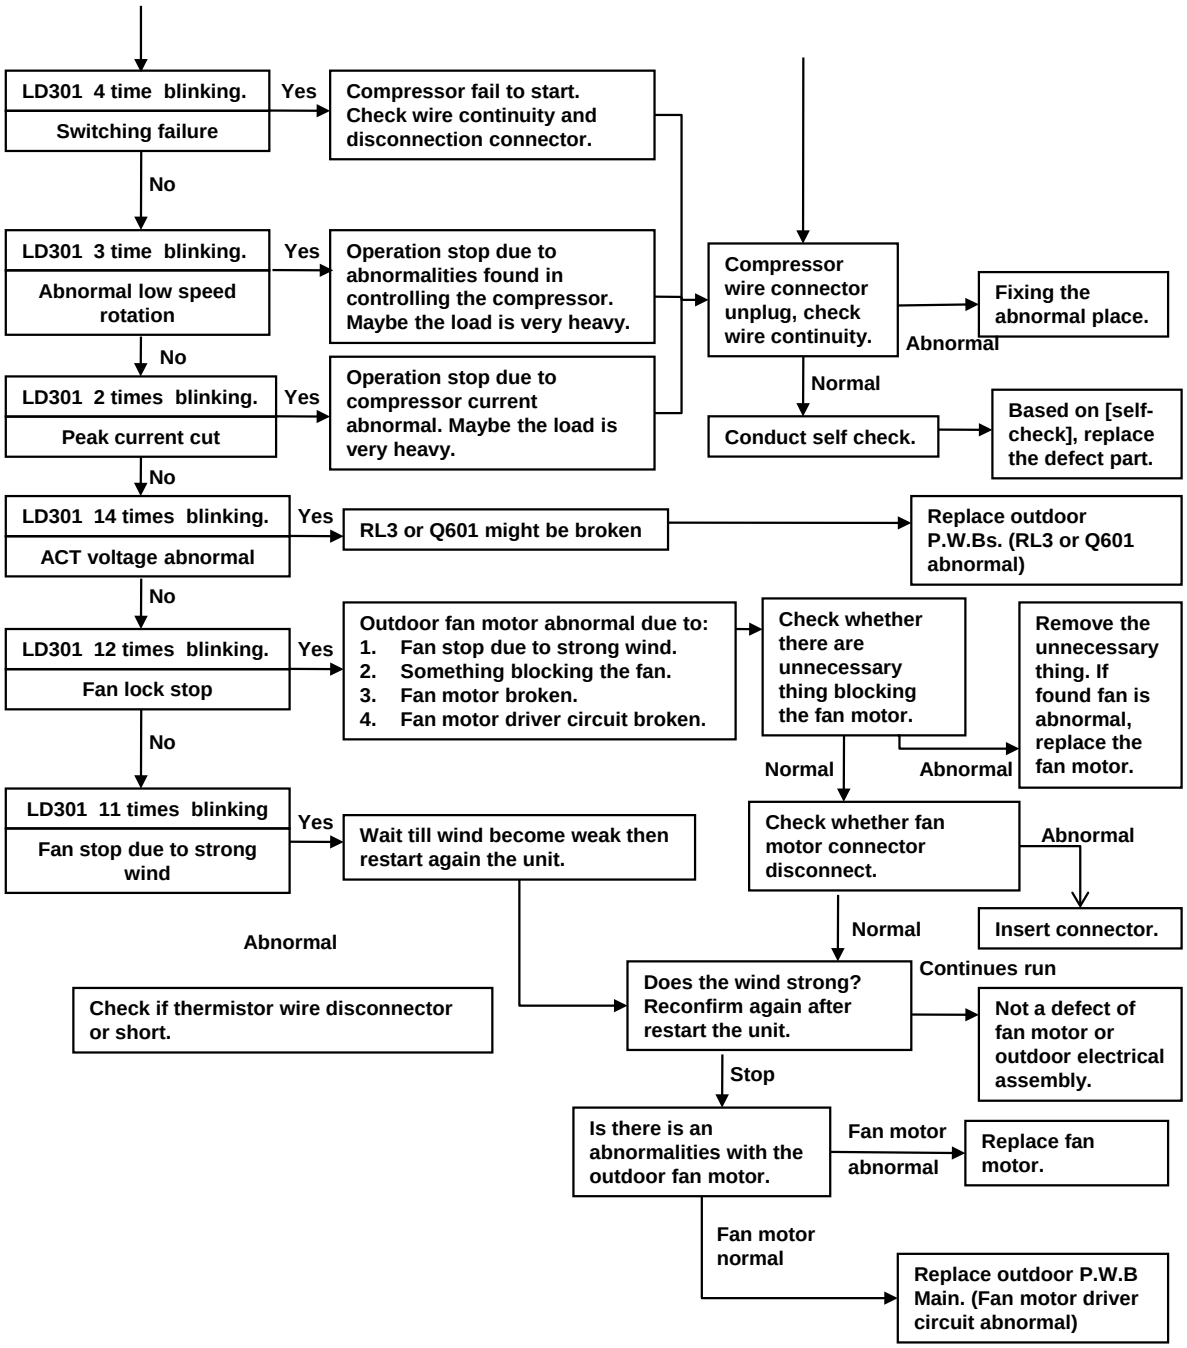

LD301 blinks 9 times. Communication error.
Yes
Is the connecting cable connected properly? (Is 35V being output on the indoor unit?)
No
Connect properly
Yes
Is DC35V being output between terminals C-D? Normal: DC32~39V.
No
Is DC35V being output at both ends of R35?
No
Replace the main PWB. Defective SW power supply
Yes
Yes
Replace the main PWB. NF coils, IF coils, etc may be broken.
Yes
Check the interface circuit and replace the main PWB if necessary.
LD301 blinks 7 times. Thermistor abnormal
Yes
Is the thermistor connector disconnected? ※The problem maybe "miss to connect back after servicing."
Yes
Connect the thermistor
No
No
Yes
Is the conitnuity of the thermistor normal?
No
Replace the thermistor
Is the thermistor circuit normal?
No
Replace parts in the thermistor circuit.
Check continuity of pattern and lead wires according to the PWB and schematic diagrams
LD301 blinks 6 times. OH thermistor detect temperature rise
Yes
Is the thermistor circuit normal?
No
Replace parts in the thermistor circuit.
No
Yes
LD301 blinks 5 times. Overload lower limit cut
Replace main PWB
Yes
No
No
LD301 blinks 4 times. Failure of switching
Yes
Is the 15V power supply output normal? (Main PWB)
Is the intelligent power module (PM) normal?
The intelligent power module may be defective. Replace the main PWB
Yes
LD301 blinks 3 times. Abnormal low speed
Yes
With CN3 and CN4 disconnected, is the 15V output between the "15V" and "15-0V" on the main PWB?
Yes
No
No
Replace the main PWB
LD301 blinks 2 times. Peak current-cut
Yes
Is the intelligent power module (IPM) normal?
No
Replacethe intelligent power module (IPM) with the main PWB
No
Yes
LD301 blinks 1 time. Reset stop
Yes
Is the reset circuit normal? (pinn⑦ at CN18 is about 5V)
No
Replace the PWB
※However, the unit always reset and stops just after power is supplied: this does not indicate a fault
Make sure again that connectors are connected securely
Perform the final operation check

14.5.2 NO OPERATION OR ABNORMAL OPERATION (RAC-18/25/35WSA, RAC-25/35/50WXA, RAC-50/60/70WPA, RAC-50FPA, RAC-50FXA, RAC-50/60/70DPA

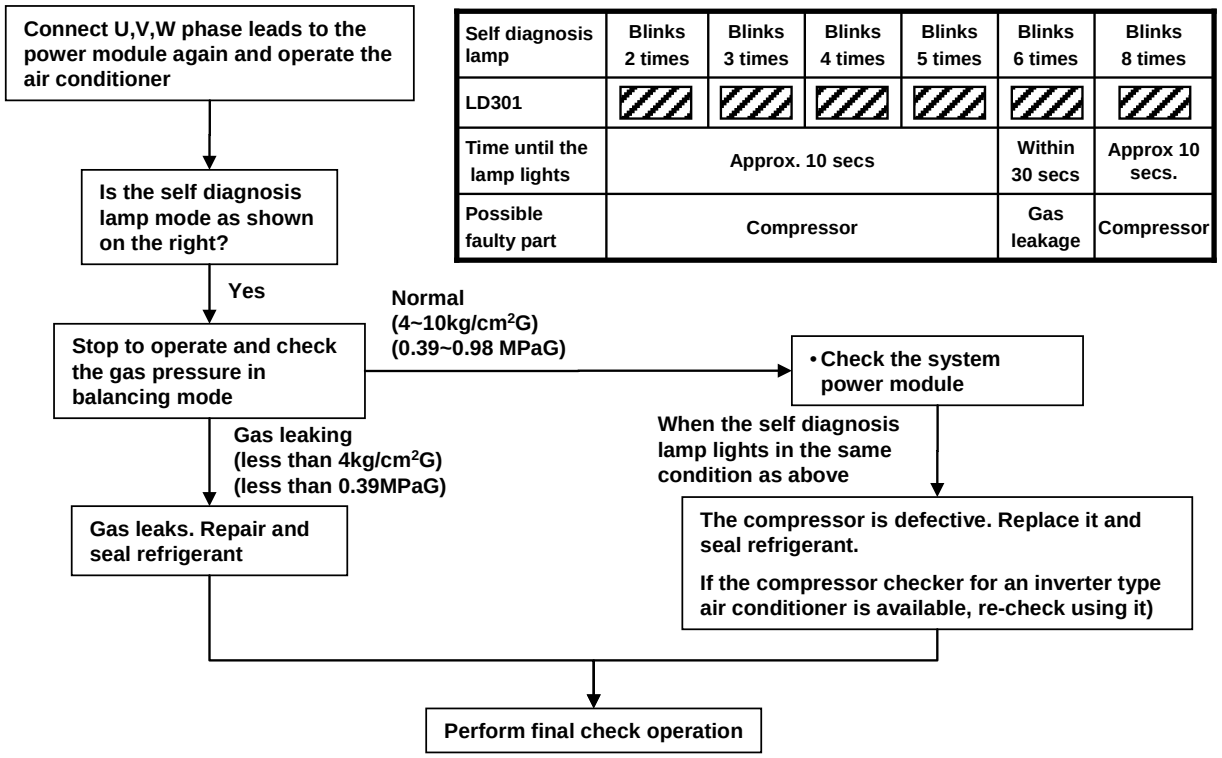

LD301 1 time blinking.
Reset stop
No
LD303 lit, normal cooling or heating mode operation.
LD301 blinking, LD303 lit, unit in full load condition. (Not malfunction)
LD301 only blinking, check blink error code as below.
Yes
Operate the unit by remote control or by pushing the test/service switch button.
Compressor stop
Specify the abnormal portion.
Electrical assembly abnormal
Replace outdoor PWB Main. (Communication circuit abnormal)
Abnormal other than electrical assembly
Repair the abnormal portion.
Compressor start
Confirm blinking times of LD301
LD301 9 times blinking.
Communication error
Yes
Refer above LED 9 times blink.
No
LD301 10 times blinking.
Supplied voltage error
Yes
Is AC220~240V being supplied to terminal L and N?
Below AC170 or more than AC240V
Check power supply.
AC170~230V
Is DC220~320V being generate? (Measure point shall refer to label on top of electrical cover)
Abnormal
Replace outdoor P.W.Bs. (Voltage rectify circuit abnormal)
Normal
Replace outdoor P.W.Bs. (Voltage sensor circuit abnormal)
No
LD301 7 times blinking.
Thermistor abnormal
Yes
Check if thermistor connector mis or half insert.
Abnormal
Re-connect the thermistor.
Normal
Check if thermistor wire disconnector or short.
Abnormal
Change thermistor.
Replace outdoor PWB main . (Thermistor sensor circuit abnormal)
No
LD301 6 times blinking
OH thermistor temperature rise
Yes
Compressor temperature rise check by OH thermistor.
Check if OH thermistor connector mis or half insert.
Abnormal
Re-connect OH thermistor.
Normal
Check if OH thermistor wire short.
Abnormal
Change OH thermistor.
Normal
Review the cooling cycle.
Replace outdoor P.W.Bs if still cannot fix after review the cycle.
LD301 5 times blinking
Overload lower limit cut
Yes
Compressor load heavy causing operation stop.
Cooling: Is the outdoor unit heat exchanger pipe choke or condenser block by something?
Heating: Is the indoor unit heat exchanger pipe choke or filter block by dust?
Yes
Countermeasure the cause of the problem.
No
Is there any abnormality to the cooling cycle.
Yes
Check the abnormal portion.
No

LD301 4 time blinking.
Switching failure
Yes
Compressor fail to start. Check wire continuity and disconnection connector.
No
LD301 3 time blinking.
Abnormal low speed rotation
Yes
Operation stop due to abnormalities found in controlling the compressor. Maybe the load is very heavy.
No
LD301 2 times blinking.
Peak current cut
Yes
Operation stop due to compressor current abnormal. Maybe the load is very heavy.
No
LD301 14 times blinking.
ACT voltage abnormal
Yes
RL3 or Q601 might be broken
Replace outdoor P.W.Bs. (RL3 or Q601 abnormal)
No
LD301 12 times blinking.
Fan lock stop
Yes
Outdoor fan motor abnormal due to:
1. Fan stop due to strong wind.
2. Something blocking the fan.
3. Fan motor broken.
4. Fan motor driver circuit broken.
Check whether there are unnecessary thing blocking the fan motor.
Abnormal
Remove the unnecessary thing. If found fan is abnormal, replace the fan motor.
Normal
No
LD301 11 times blinking
Fan stop due to strong wind
Yes
Wait till wind become weak then restart again the unit.
Check whether fan motor connector disconnect.
Abnormal
Insert connector.
Normal
Abnormal
Check if thermistor wire disconnector or short.
Does the wind strong? Reconfirm again after restart the unit.
Continues run
Not a defect of fan motor or outdoor electrical assembly.
Stop
Is there is an abnormalities with the outdoor fan motor.
Fan motor abnormal
Replace fan motor.
Fan motor normal
Replace outdoor P.W.B Main. (Fan motor driver circuit abnormal)
Compressor wire connector unplug, check wire continuity.
Abnormal
Fixing the abnormal place.
Normal
Conduct self check.
Based on [self-check], replace the defect part.

14.6 CHECKING BETWEEN GAS LEAKAGE AND COMPRESSOR FAULTY

14.6.1 TROUBLESHOOTING PROCEDURE (NO OPERATION, NO HEATING OR NO COOLING)

Self diagnosis lamp	Blinks 2 times	Blinks 3 times	Blinks 4 times	Blinks 5 times	Blinks 6 times	Blinks 8 times
LD301	▨	▨	▨	▨	▨	▨
Time until the lamp lights	Approx. 10 secs				Within 30 secs	Approx 10 secs.
Possible faulty part	Compressor				Gas leakage	Compressor

14.7 TROUBLESHOOTING WHEN INDOOR TIMER LAMP BLINKS

14.7.1 MONOZONE / MULTIZONE INDOOR

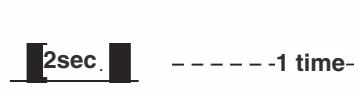

No	Blinking of TIMER lamp	Reason for indication	Possible causes	RAK	RAF	RAI	RAD
1		Refrigerant cycle abnormal When the indoor heat exchanger temperature is too low in the heating mode or it is too high in the cooling mode.	1) Reversing valve defective 2) Heat exchanger thermistor disconnected (only in heating mode) The malfunction mode is displayed only after the abnormal condition occurs 3rd time (read every 3 minutes *Note (for RAI & RAD) • Four-way valve faulty. • Disconnection in heat exchange thermistor (only during heating)	★	★	★	★
2		Outdoor unit forced operation. When the outdoor unit is in forced operation or balancing operation after forced operation	Electrical parts in the outdoor unit.	★	★	★	★
3		Indoor/outdoor interface defective When the interface signal from the outdoor unit is interrupted.	1) Indoor interface circuit. 2) Outdoor interface circuit	★	★	★	★
4		Outdoor electrical assembly defective When the error mode is detected times within 30 minutes from outdoor unit electrical components. (However, when error is detected 8 times within two hours only for outdoor thermistor	Outdoor unit electrical components. (For details, operate again using remote controller and check from self-diagnosis display of outdoor unit)	★	★	★	★
6		Abnormal water level detection All stop when the float switch has been activated	1) Drain stopped up 2) Drain pump 3) Float switch			★	★
7		Drain pump forced operation When the knob of drain pump test switch at indoor P.W.B main slide to “test” position.	1) Indoor PWB (Main)			★	★
9		Room thermistor or heat exchanger thermistor is faulty When room thermistor or heat exchanger thermistor is opened circuit or short circuit.	1) Room thermistor 2) Heat exhanger thermistor	★	★	★	★
10		Over-current detection at the DC fan motor Overcurrent in indoor DC fan motor has been detected.	1) Indoor fan locked 2) Indoor fan motor 3) Indoor control P.W.B.	★	★	★	★
11		IC401 or IC402 data reading error When data read from IC401 or IC402 is incorrect.	IC401 or IC402 abnormal	★	★	★	★

*Note: Refer to Chapter 9 for error codes displayed on remote controllers.

(Lights for 0.35 sec. at interval of 0.35 sec.)

<Cautions>
1) If the interface circuit is faulty when power is supplied, the self diagnosis display will not be displayed
2) If the indoor unit does not operate at all, check if the connecting cable is connected to the outdoor unit.

14.7.2 MONO SPLIT INDOOR (RAK-25/35PXA, RAK-18/25/35/50/60/70PPA, RAK-18/25/35/50PEA, RAF-25/35/50RPA)

No	Blinking of TIMER lamp	Reason for indication	Possible causes
1		Reversing valve defective When the indoor heat exchanger temperature is too low in the heating mode or it is too high in the cooling mode. 1times	1) Reversing valve defective 2) Heat exchanger thermistor disconnected (only in heating mode) (Note) The malfunction mode is displayed only after the abnormal condition occurrs 3rd time (read every 3 minutes
2		Outdoor unit is under forced operation. When the outdoor unit is in forced operation or balancing operation after forced operation	Electrical parts in the outdoor unit.
3		Indoor/outdoor interface defective When the interface signal from the outdoor unit is interrupted.	1) Indoor interface circuit. 2) Outdoor interface circuit
4		Outdoor unit electrical components defective When the error mode is detected times within 30 minutes from outdoor unit electrical components. (However, when error is detected 8 times within two hours only for outdoor thermistor	Outdoor unit electrical components. (For details, operate again using remote controller and check from self-diagnosis display of outdoor unit)
5		Room thermistor or heat exchanger thermistor is faulty When room thermistor or heat exchanger thermistor is opened circuit or short circuit.	1) Room thermistor 2) Heat exhanger thermistor
5		Over-current detection at the DC fan motor When over-current is detected at the DC fan motor of the indoor unit. 10times	1) Indoor fan locked 2) Indoor fan motor 3) Indoor control P.W.B.
※1 7		IC401 or IC402 data reading error When data read from IC401 or IC402 is incorrect.	IC401 or IC402 abnormal

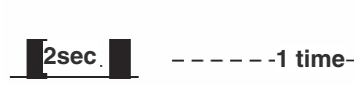

*Note: Refer to Chapter 9 for error codes displayed on remote controllers.

(Lights for 0.35 sec. at interval of 0.35 sec.)

<Cautions>

3) If the interface circuit is faulty when power is supplied, the self diagnosis display will not be displayed
4) If the indoor unit does not operate at all, check if the connecting cable is connected to the outdoor unit.
5) To check operation again when the timer lamp is blinking, you can use the remote control for operation (except for mode mark ※1)

14.7.3 MONO SPLIT INDOOR (RAK-18/25/35PSA, RAK-18/25/35PSAN, RAK-18/25/35PSPA)

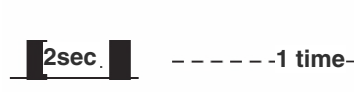

No	Blinking of TIMER lamp	Reason for indication	Possible causes
1		Reversing valve defective When the indoor heat exchanger temperature is too low in the heating mode or it is too high in the cooling mode. 1times	1) Reversing valve defective 2) Heat exchanger thermistor disconnected (only in heating mode) (Note) The malfunction mode is displayed only after the abnormal condition occurrs 3rd time (read every 3 minutes
2		Outdoor unit is under forced operation. When the outdoor unit is in forced operation or balancing operation after forced operation	Electrical parts in the outdoor unit.
3		Indoor/outdoor interface defective When the interface signal from the outdoor unit is interrupted.	1) Indoor interface circuit. 2) Outdoor interface circuit
4		Malfunction of Power Relay	Power Relay Defective
5		Room thermistor or heat exchanger thermistor is faulty When room thermistor or heat exchanger thermistor is opened circuit or short circuit.	1) Room thermistor 2) Heat exhanger thermistor
6		Over-current detection at the DC fan motor When over-current is detected at the DC fan motor of the indoor unit. 10times	1) Indoor fan locked 2) Indoor fan motor 3) Indoor control P.W.B.
7			High Voltage Generator Defective
8			1) Connecting Cord Defective 2) Outdoor Defective
9		IC401 or IC402 data reading error When data read from IC401 or IC402 is incorrect.	IC401 or IC402 abnormal
10			Switch PWB Defective
11			Cleaning Unit Defective
12			Failure of Peltier Device

*Note: Refer to Chapter 9 for error codes displayed on remote controllers.

(Lights for 0.35 sec. at interval of 0.35 sec.)

<Cautions>
1) If the interface circuit is faulty when power is supplied, the self diagnosis display will not be displayed
2) If the indoor unit does not operate at all, check if the connecting cable is connected to the outdoor unit.

14.7.4 MONO SPLIT INDOOR (RAK-50PXA)

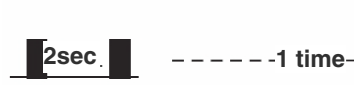

No	Blinking of TIMER lamp	Reason for indication	Possible causes
1		Reversing valve defective When the indoor heat exchanger temperature is too low in the heating mode or it is too high in the cooling mode. 1times	1) Reversing valve defective 2) Heat exchanger thermistor disconnected (only in heating mode) (Note) The malfunction mode is displayed only after the abnormal condition occurrs 3rd time (read every 3 minutes
2		Outdoor unit is under forced operation. When the outdoor unit is in forced operation or balancing operation after forced operation	Electrical parts in the outdoor unit.
3		Indoor/outdoor interface defective When the interface signal from the outdoor unit is interrupted.	1) Indoor interface circuit. 2) Outdoor interface circuit
4		Outdoor unit electrical components defective When the error mode is detected times within 30 minutes from outdoor unit electrical components. (However, when error is detected 8 times within two hours only for outdoor thermistor	Outdoor unit electrical components. (For details, operate again using remote controller and check from self-diagnosis display of outdoor unit)
5		Room thermistor or heat exchanger thermistor is faulty When room thermistor or heat exchanger thermistor is opened circuit or short circuit.	1) Room thermistor 2) Heat exhanger thermistor
6		Over-current detection at the DC fan motor When over-current is detected at the DC fan motor of the indoor unit. 10times	1) Indoor fan locked 2) Indoor fan motor 3) Indoor control P.W.B.
※1 7			Abnormal of ionizer.
8		Interface voltage error	1) Connecting Cord Defective 2) Outdoor Defective
9		IC401 or IC402 data reading error When data read from IC401 or IC402 is incorrect.	IC401 or IC402 abnormal

*Note: Refer to Chapter 9 for error codes displayed on remote controllers.

(Lights for 0.35 sec. at interval of 0.35 sec.)

<Cautions>
1) If the interface circuit is faulty when power is supplied, the self diagnosis display will not be displayed
2) If the indoor unit does not operate at all, check if the connecting cable is connected to the outdoor unit.
3) To check operation again when the timer lamp is blinking, you can use the remote control for eoperation (except for mode mark ※1)

14.7.5 MONO SPLIT INDOOR (RAF-25/35/50PXA)

No	Blinking of TIMER lamp	Reason for indication	Possible causes
1		Reversing valve defective When the indoor heat exchanger temperature is too low in the heating mode or it is too high in the cooling mode. 1times	1) Reversing valve defective 2) Heat exchanger thermistor disconnected (only in heating mode) (Note) The malfunction mode is displayed only after the abnormal condition occurrs 3rd time (read every 3 minutes
2		Outdoor unit is under forced operation. When the outdoor unit is in forced operation or balancing operation after forced operation	Electrical parts in the outdoor unit.
3		Indoor/outdoor interface defective When the interface signal from the outdoor unit is interrupted.	1) Indoor interface circuit. 2) Outdoor interface circuit
4		Outdoor unit electrical components defective When the error mode is detected times within 30 minutes from outdoor unit electrical components. (However, when error is detected 8 times within two hours only for outdoor thermistor	Outdoor unit electrical components. (For details, operate again using remote controller and check from self-diagnosis display of outdoor unit)
5		Room thermistor or heat exchanger thermistor is faulty When room thermistor or heat exchanger thermistor is opened circuit or short circuit.	1) Room thermistor 2) Heat exhanger thermistor
6		Over-current detection at the DC fan motor When over-current is detected at the DC fan motor of the indoor unit. 10times	1) Indoor fan locked 2) Indoor fan motor 3) Indoor control P.W.B.
8		Interface voltage error	1) Connecting Cord Defective 2) Outdoor Defective
9		IC401 or IC402 data reading error When data read from IC401 or IC402 is incorrect.	IC401 or IC402 abnormal

*Note: Refer to Chapter 9 for error codes displayed on remote controllers.

(Lights for 0.35 sec. at interval of 0.35 sec.)

<Cautions>
1) If the interface circuit is faulty when power is supplied, the self diagnosis display will not be displayed
2) If the indoor unit does not operate at all, check if the connecting cable is connected to the outdoor unit.

14.7.6 MONO SPLIT INDOOR (RAD-50/60/70PPA)

No	Blinking of TIMER lamp	Reason for indication	Possible causes
1		Refrigerant cycle abnormal When the indoor heat exchanger temperature is too low in the heating mode or it is too high in the cooling mode.	1) Reversing valve defective 2) Heat exchanger thermistor disconnected (only in heating mode) The malfunction mode is displayed only after the abnormal condition occurs 3rd time (read every 3 minutes *Note (for RAI & RAD) • Four-way valve faulty. • Disconnection in heat exchange thermistor (only during heating)

14.9 CHECKING POWER MODULE

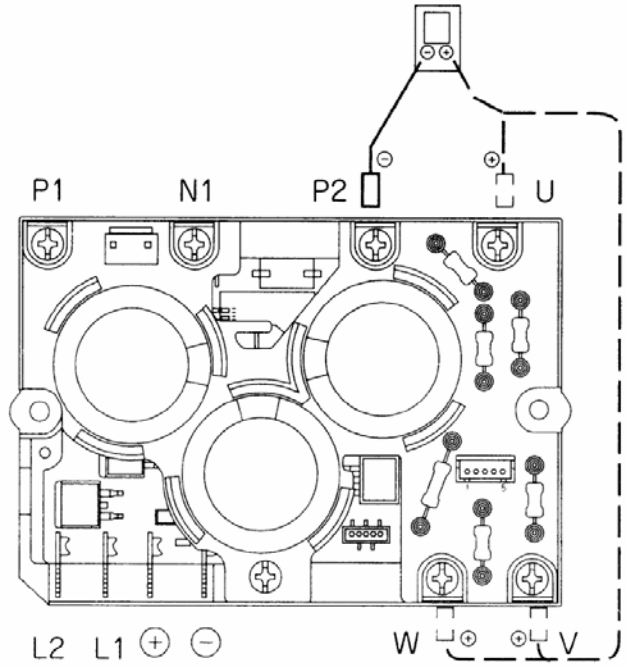

■ Checking power module using tester

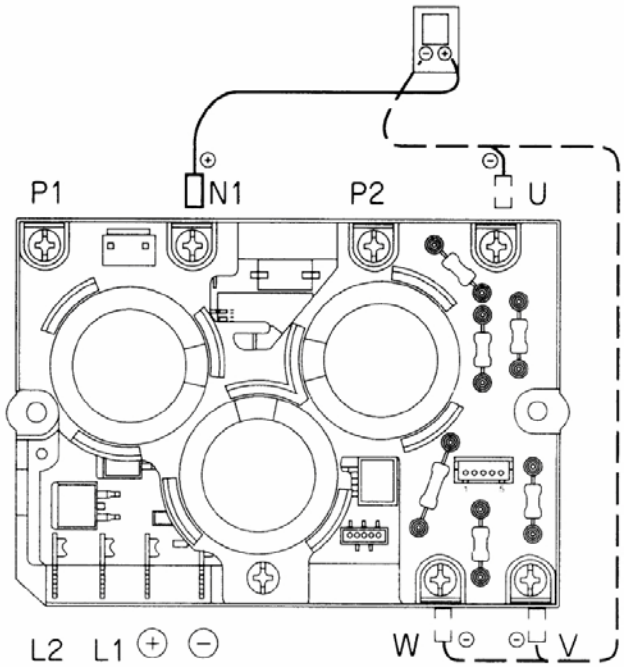

Set tester to resistance range (x 100)
If indicator shows high resistance in the following conductivity check, the power module is considered normal. (In case of the digital tester, since builit-in battery is set in reverse direction, ⊕ and ⊖ terminals are reversed).

Caution

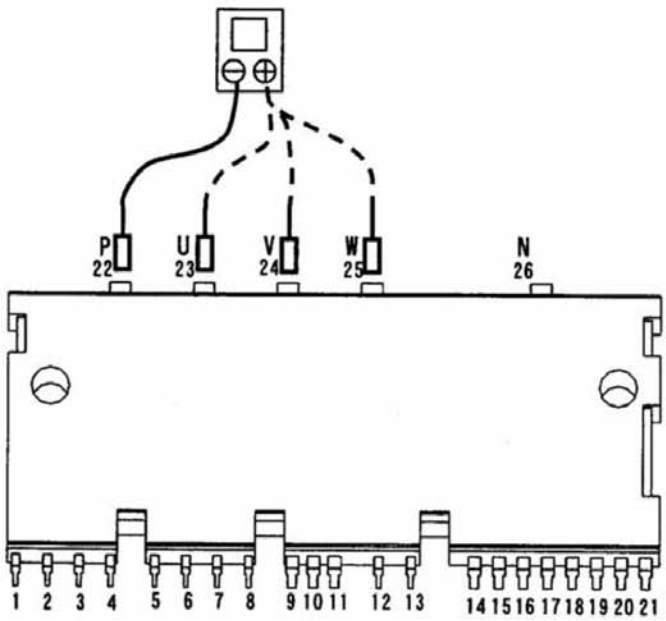

However, if the inner circuit of power module is already disconnected (open), the HIGH resistance shown may be misjudged as normal. In this case, please check the resistance by the reversing ⊕ and ⊖ probe polarity against what is shown in the diagram below.and measure again, If is considered normal if the tester shows LOW resistance. Furthermore, compare how the indicator swings at each U, V and W phases. If indicator swings the same way at each terminal, the power module is judged normal

14.10 THERMISTOR

14.10.1 NAME AND ROLE OF EACH THERMISTOR

Name	Connector no.	Measuring point	role
OH thermistor	CN5	Compressor head	If the temperature of the compressor rises abnormally (118°C), the compressor will be stopped. The temperature is used to decide the operation of the valve
DEF thermistor	CN6	Heat exchanger	The thermistor decide the defrost operation during heating combine the data of the outside temperature and its data
Outdoor temperature thermistor	CN7	Outside temperature	Outdoor temperature is used to decide the various operation of the air conditioner
Electrical Expansion valve thermistor (narrow pipe 1)	CN8	Indoor unit (narrow pipe 1)	The thermistors detect the temperature of the piping to the indoor units. The temperature are used to decide how much the expansion valve is opened
Electrical Expansion valve thermistor (narrow pipe 2)		Indoor unit (narrow pipe 2)	
Electrical Expansion valve thermistor (narrow pipe 3) *		Indoor unit (narrow pipe 3)	
Electrical Expansion valve thermistor (narrow pipe 4) *		Indoor unit (narrow pipe 4)	
Electrical Expansion valve thermistor (wide pipe 1)	CN9	Indoor unit (wide pipe 1)	
Electrical Expansion valve thermistor (wide pipe 2)		Indoor unit (wide pipe 2)	
Electrical Expansion valve thermistor (wide pipe 3) *		Indoor unit (wide pipe 3)	
Electrical Expansion valve thermistor (wide pipe 4) *		Indoor unit (wide pipe 4)	

"*" Starmark is applicable to respective models only

14.10.2 REFERENCE VALUE FOR THERMISTOR'S RESISTANCE AND TEMPERATURE

Electrical expansion valve thermistor	Temperature	Resistance	Microcomputer pin potential
DEF thermistor	-15°C	12.6kΩ	1.0V
	0°C	6.1 kΩ	1.7V
	25°C	2.2 kΩ	3.0V
	50 °C	860 Ω	3.9V
	75°C	400 Ω	4.4V
Outdoor temperature thermistor	-15°C	12.6kΩ	1.0V
	0°C	6.1 kΩ	1.7V
	15°C	3.2 kΩ	2.4V
	30 °C	2 kΩ	3.1V
OH thermistor	25 °C	33.9 kΩ	0.5V
	50 °C	10.8 kΩ	1.3V
	75 °C	4.1 kΩ	2.4V
	100 °C	1.7 kΩ	3.4V
	105 °C	1.5 kΩ	3.6V
	118 °C	1 kΩ	3.9V

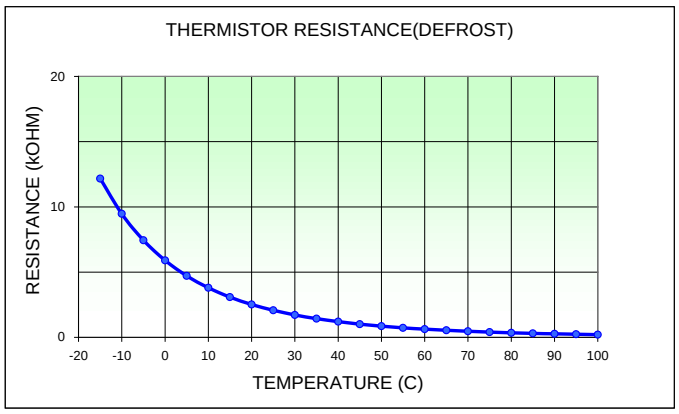

NOTE:
The table shows the corresponding reference value between thermistor's resistance and the temperature. The value stated in the table might be slightly differ from measured value, depending on the measuring instrument.

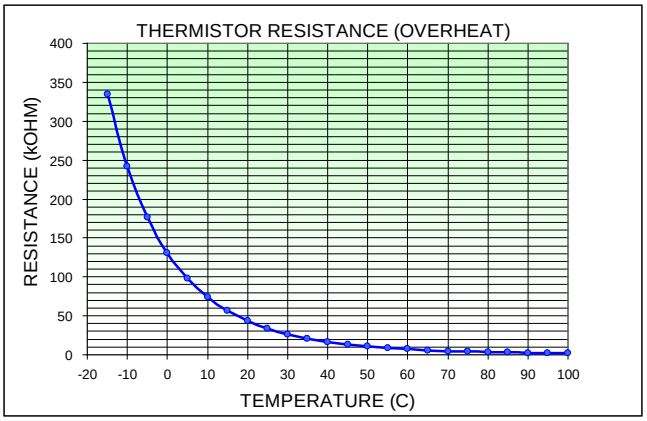

When measuring the resistance, pull out the connector after turning off the power supply to avoid voltage leak.

WARNING:
Pulling out the connector while the power supply is turn on will cause electrical shock, leak of current or burn of measuring instrument.

15.3.4. DIP switch setting 15-9
15.3.5. TEST RUN 15-10

15.1. INSTALLATION AT COLD REGIONS OR SNOWFALL REGIONS.

Snowy district reports that even the powerful PAM air conditioner is difficult to warm in the following situations.
The outdoor unit is buried in snow

- Snow stuck to the sides or the air inlet (rear side) of the outdoor. Therefore, only the snow around the heat exchanger can be melted by the defrost operation.
- Water from defrost operation is frozen at the base of the outdoor unit.

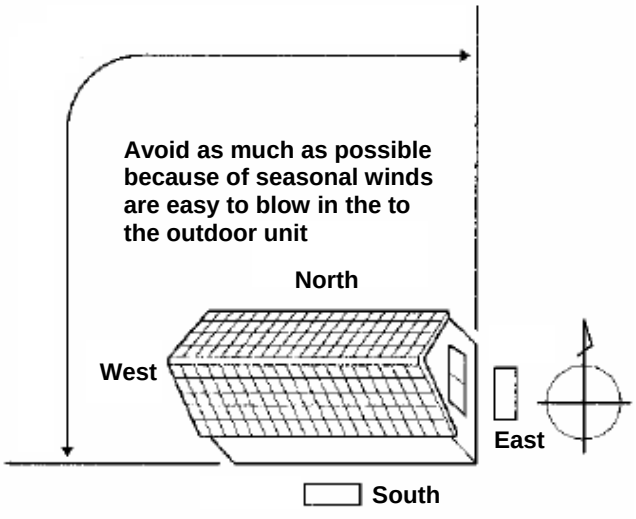

15.2. INSTALLATION POINTS ON OUTDOOR UNITS IN COLD OR SNOWFALL REGIONS.

When the outdoor unit is installed at cold regions, please install at places where there is less impact from the snow or seasonal wind.

– *With the powerful PAM air conditioner, it is still difficult to provide sufficient heating if the outdoor unit is exposed to heavy snow piles and cold seasonal wind blow. Therefore, to enable effective heating performance, it is important to ensure the outdoor unit is installed at a location where heat could be gathered and where exposure to seasonal wind is minimal.*

15.2.1. INSTALLATION PLACE OF COLD AND SNOWFALL REGIONS

- The outdoor unit should not be installed at the places where the cold seasonal wind is blowing directly from the north or west side of a building.
- Please install at the east or south side of a building where enhanced heating efficiency and less influence of seasonal winds and easy to collect heat

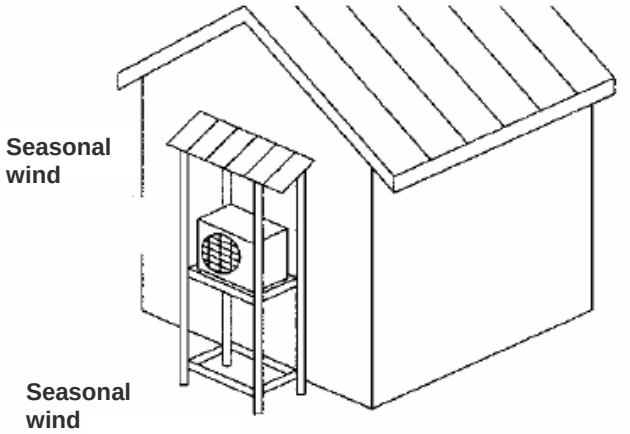

15.2.2. CONSIDERATIONS TO THE SEASONAL WINDS AND SNOWFALL

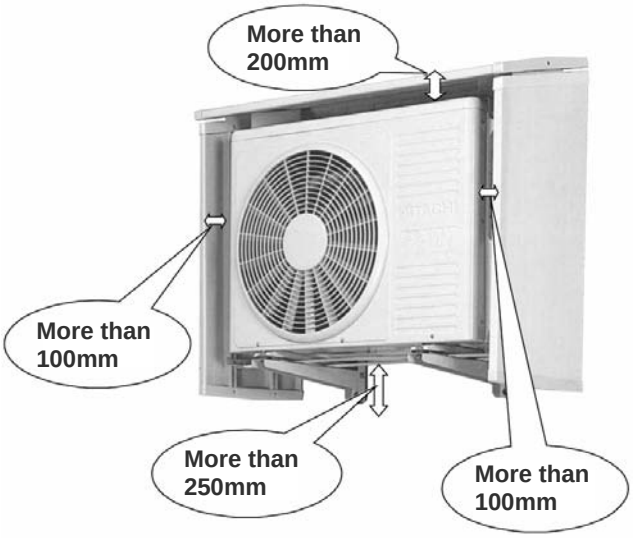

- When snow blows into the outdoor unit from the side, it becomes easy to stick snow and difficult to collect heat
- Please fix the snowstorm guard against wind or snow in order not to blow directly into the outdoor unit

Snow will stuck to the outdoor unit caused by seasonal wind

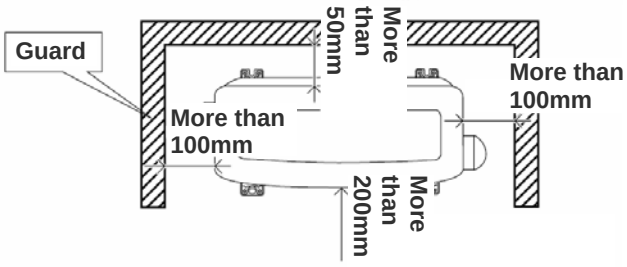

- Examples of snowstorm guard

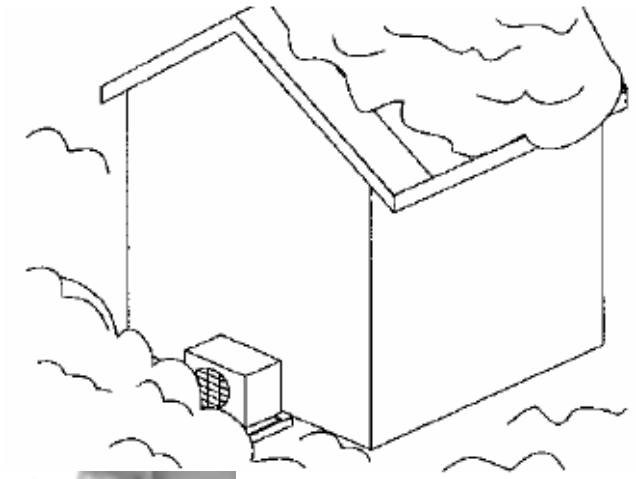

15.2.3. CONSIDERATIONS TO SNOWFALL / SNOW BUILDUP

- When the outdoor unit is to be placed where there is heavy snow accumulation, please install at the high wall position by using a high-rack or metal fittings to wall.
- To protect against falling snow, please install under the eaves of the building.

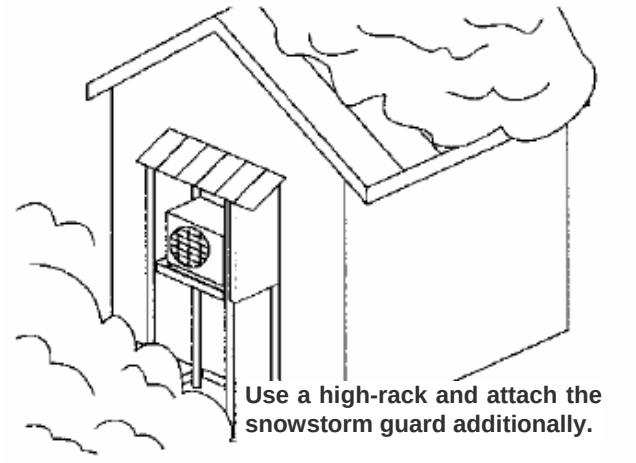

In case of ground installation

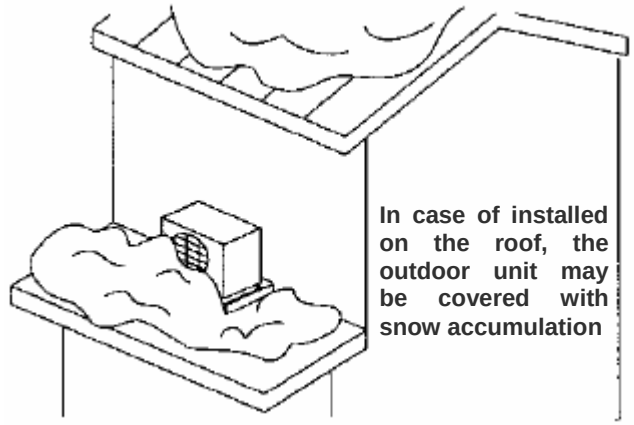

In case of installed on the ground, the outdoor unit may be covered with snow.

To be installed at high position as much has possible

Use a high-rack and attach the snowstorm guard additionally.

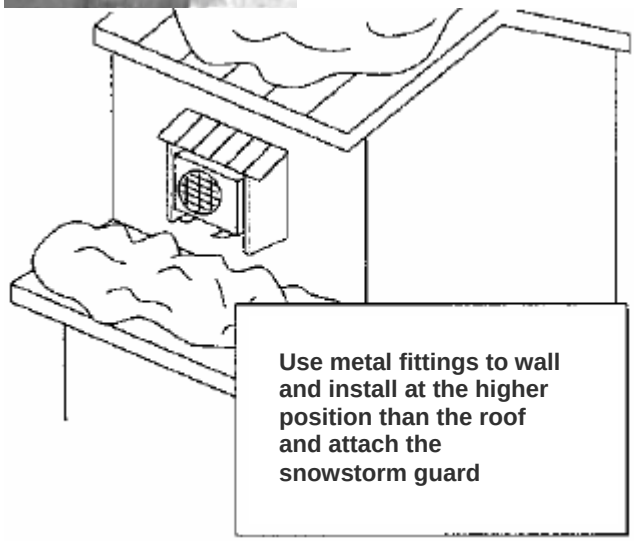

In case of installing on the second storey

In case of installed on the roof, the outdoor unit may be covered with snow accumulation

Mount the unit in a high position on a wall

Use metal fittings to wall and install at the higher position than the roof and attach the snowstorm guard

CAUTION:

– *If the distance between the outdoor unit and the wall is too close, the place between the rear side (heat exchanger) and he wall may become a snow accumulation.*

– *The distance between the outdoor unit and the wall should be more than 100mm, and are attached with snowstorm guard.*

15.2.4. CONSIDERATIONS TO SLIDING SNOW FROM ROOF OR SNOWFALL

- Please install the outdoor unit at the places that are not exposed to snow sliding off from the roof or snow fall.
- Please install the snow storm guard to prevent the outdoor unit from exposing directly to the melting snow water or rain water.

If the outdoor unit is installed under the short eaves, the melted snow water or rainwater may enter directly into the outdoor unit.

If the outdoor unit is installed at the place where the snow may slide from the above roof, the outdoor unit will be covered with snow.

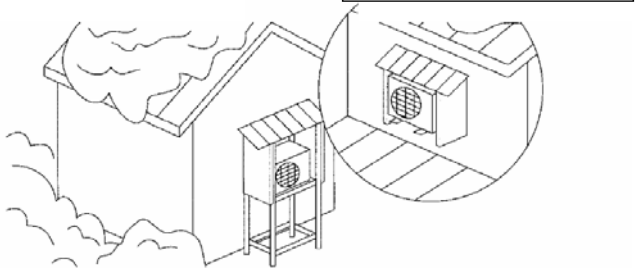

At the places where possibilities of melted snow water or snow sliding off from roof

Please install at the place where melted snow water do not drop from the roof and fix the snowstorm guard.

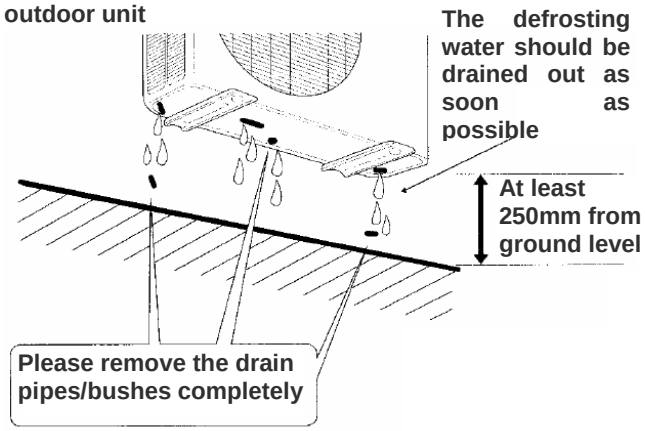

Please install at the high position where it is not covered with snow by using metal fittings to wall and attach the snowstorm guard

15.2.5. AS TO PROPER DRAINAGE OF DEFROSTING WATER

- At cold districts, there is a possibility that drainage can not be done due to freezing the defrosting water on the base surface. Therefore, please remove the drain pipes attached to the bottom of the outdoor unit and the bushes. If any, install at places where the defrosting water can flow smoothly.
- The drainage holes will be covered by icicles which produced by the defrosting water from the bottom. Therefore please mount the unit at least 250mm from the eaves and so on.

To make better drainage from bottom face of the outdoor unit

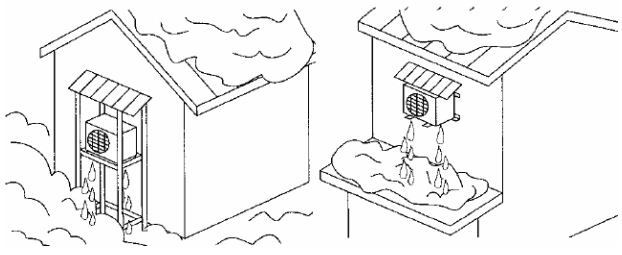

CAUTION:

– *Drainage of the defrosting water by connecting the drain pipe will cause freezing. Do not do it.*

– *If the bushes are not removed, the defrosting water will be frozen at the base of the heat exchanger. This causes heating capacity to drop and abnormal noise operation.*

– *If the blocks of the plastic block racks are used, the drainage hole at the base bottom may be blocked or covered with icicles (frozen water from defrost). Do not do it.*

Ensure enough clearance at the ground when installing the unit so the water could drain out smoothly.

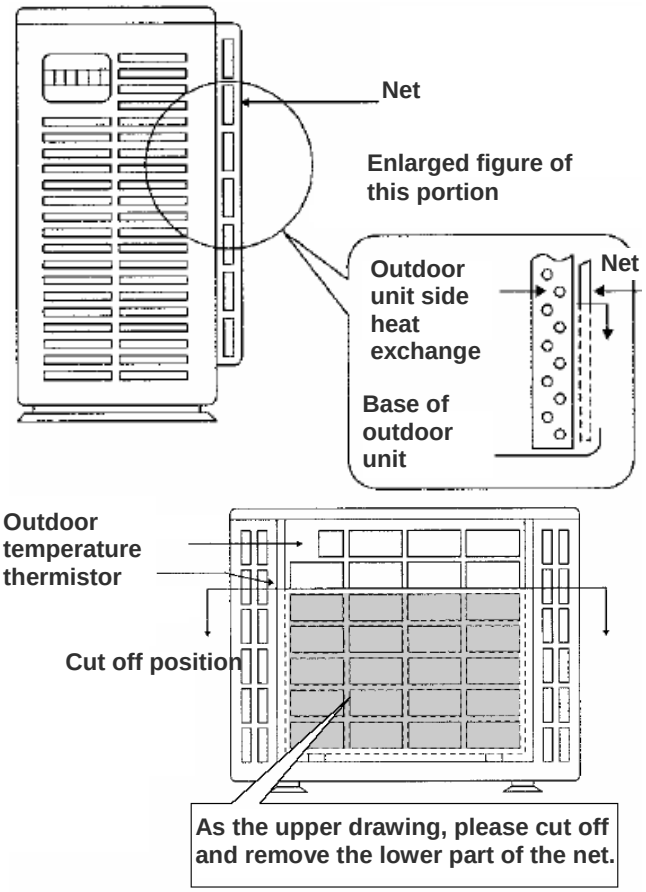

Installation using high position racks

Installation using metal fittings on wall

15.2.6. REQUEST TO CUT NET ATTACHED TO REAR SIDE OF OUTDOOR UNIT

At the places, where snow enters into the air inlet, the net at the rear side will lead to easy snow accumulation. Moreover, only the snow around the heat exchanger may be melted during defrosting whereas snow that attached to the net will remain stuck and not melt. Therefore, please cut the net at the rear after installation.

15.2.7. INSTALLATION OF HOT PIPE

At places where the temperature is low, water from defrost can freeze easily and is impossible to drain out from the base bottom. The Hot-pipe is to be used so that the drainage holes will not be blocked.

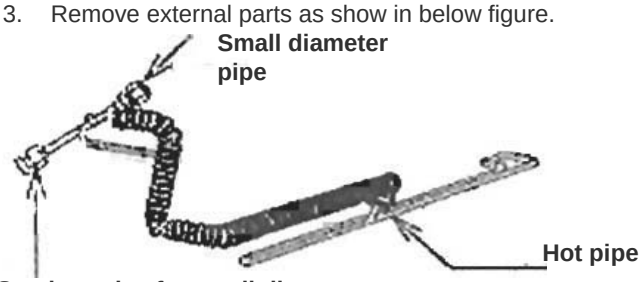

NOTE:

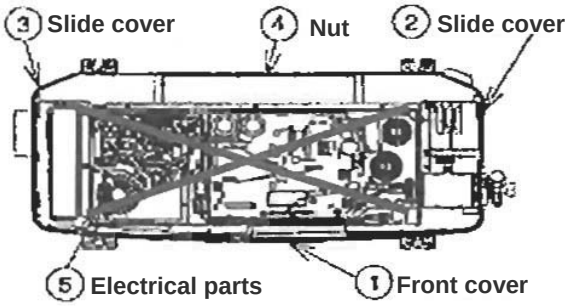

– *No responsibility is accepted for any form of use other than the designated applications.*

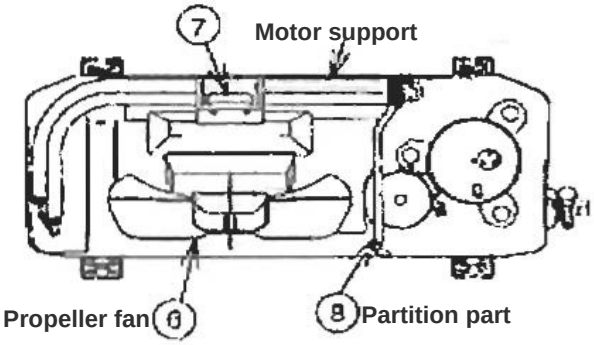

– *Heating and cooling capability may be slightly affected by the use of the hot pipe.*

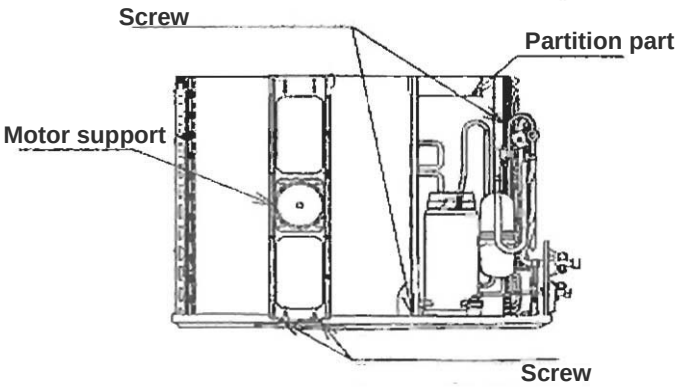

– *Time taken to heat and cool may be slightly longer when the hot pipe is used.*

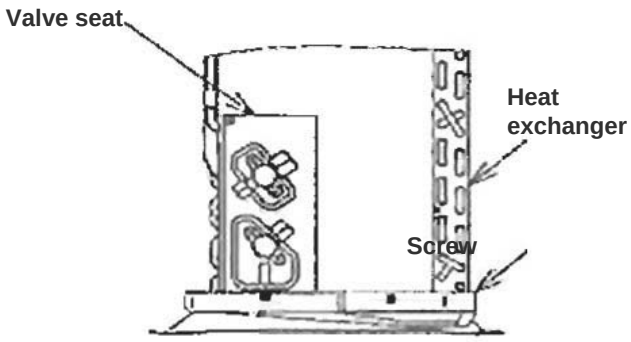

1. Turn off the circuit breaker and remove the connecting cord.
2. Remove the attached pipes from the service valve.
3. Remove external parts as show in below figure.

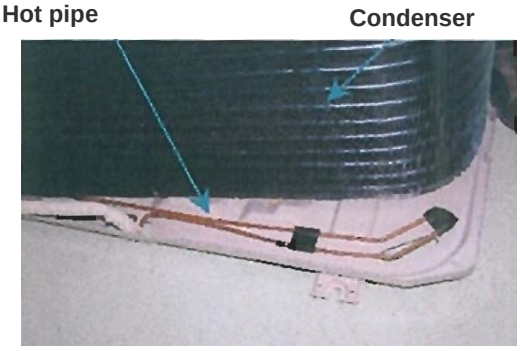

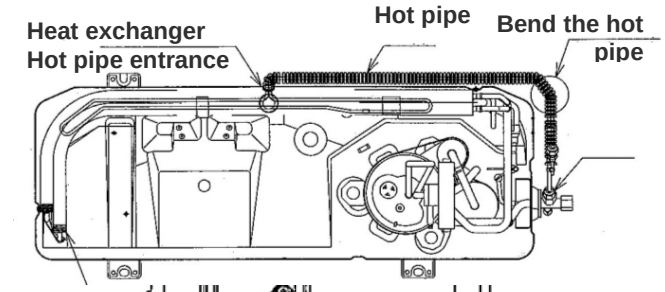

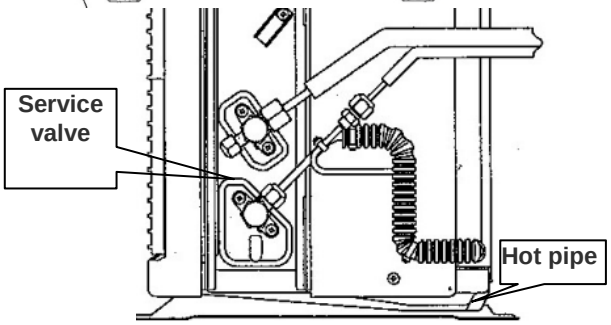

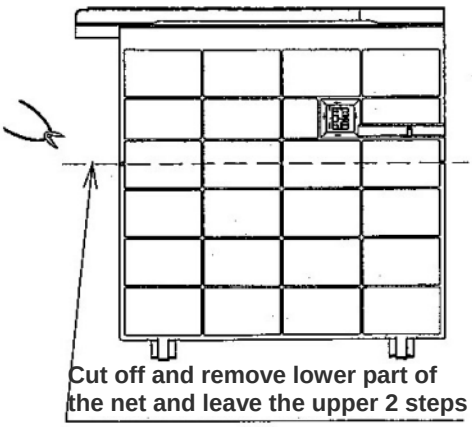

4. Remove the bushing that is attached to the base.
5. Remove the securing screw of the heat exchanger.
6. Lift up the heat exchanger and create a gap of approximately 10mm between the base and the lower surface of the heat exchanger.

7. Insert the hot pipe into the top of the base from the gap.

8. Return the heat exchanger to the original position, and fasten the screws. Bend the hot pipe so that the flare nut is approximately 10cm from the service valve.
9. The net at the rear side will accelerate snow accumulation. The snow on the net may not defrost even by defrosting from the heat exchanger. Therefore, cutting the net and reassemble all removed parts in step 3.
10. Connect the pipes and the hot pipe between the smaller side service valve and the smaller pipe. Adjust the length of the smaller pipe by cutting off the excess.
11. Connect the connecting cord to the terminal board.
12. Vacuum the air inside the system.
13. Check for gas leakage at the service valve.
14. Perform test to make sure the unit is operating correctly before reinstalling the unit.

Applicable models	Hot-pipe part #
RAC-35WPA	RAC-25YH4 500

15.3. H-LINK ADAPTOR

15.3.1. SAFETY SUMMARY

DANGER:

– *DO NOT pour water into the remote control switch (hereafter called "controller"). This product is equipped with electrical parts. This will cause serious electrical shock.*

WARNING:

– *DO NOT perform installation work and electrical wiring connection by yourself. Contact your distributor or dealer of HITACHI and ask then for installation work and electrical wiring by service person. The specified cable should be used to connect (i) room air conditioner and adaptor, and (ii) controller and adaptor.*

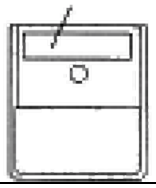

CAUTION:

– *DO NOT install the indoor unit, outdoor unit, controller and cable as such places as:*
  – *where there is oil vapor and dispersion of oil*
  – *where there is sulfuric environment (near the hot springs)*
  – *where there is a flammable gas*
  – *where there is salty environment (near the sea)*
– *DO NOT install the indoor unit, outdoor unit, controller an cable within approximately 3 meters form strong electromagnetic wave radiators, such as medical equipment. In case that the controller is installed in a place where there is electromagnetic wave direct-radiation, shield the controller and cables by covering with the steel box and running the cable through the metal conduit tube.*
– *In case that there is electric noise at the power source for the indoor unit, provide a noise filter.*

15.3.2. INSTALLATION WORK

■ Before installation

Check the contents and the number of the accessories in the packing.

Adaptor	 **With two 1.8m cables**
1 piece of cover for hiding the covering	**Attached 2 sided tapes** 
Two-sided tape for attaching to Adaptor	 **110x40x3mm**
2 connectors for H-Link connection	
2 tapping screws for attaching to wall	 **ϕ3.0 x 10mm**
2 screws for attaching to wooden wall	 **ϕ3.1 x 16mm**

1) RAC adaptor can be installed to the wall as well as on the air conditioner itself
2) Install RAC adaptor in the vertical surface as shown below.

Upper side

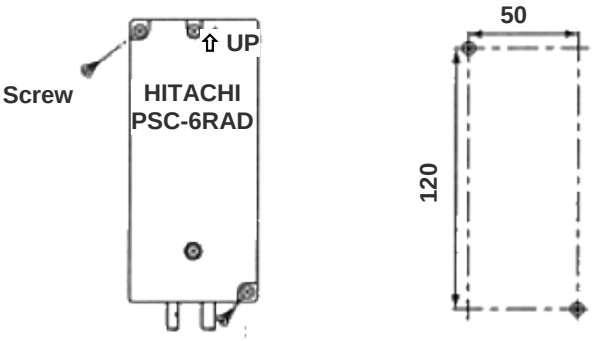

Mark "⇧ UP"

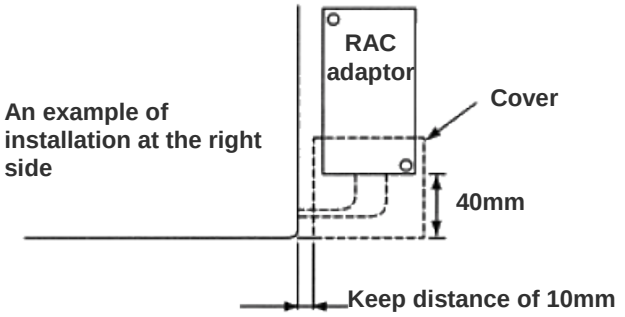

Wiring outlet

Bottom side

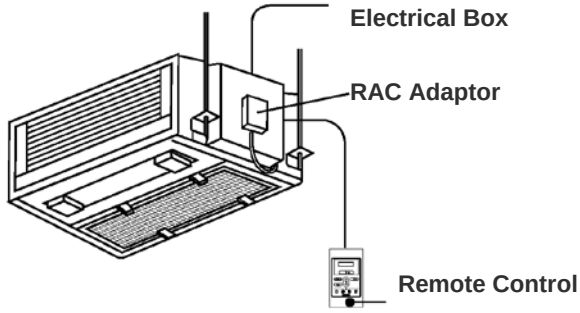

3) Installation procedure
   a) When installing to the wall.
      i) Fix the adaptor with 2 screws. Tapping screw is for metal surface, and other screw is for wooden surface.

      ii) When using the cover
      It can be installed at the right and left side of room air conditioner. Fix the cover and RAC adaptor with the two-sided tape (accessory).

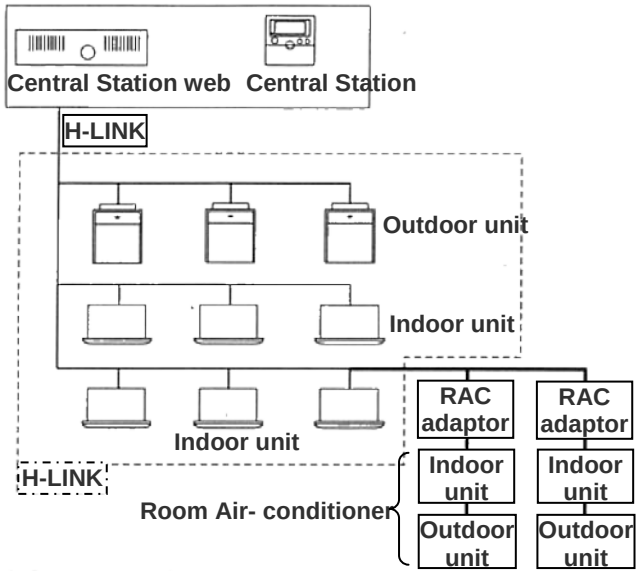

b) When installing on the room air-conditioner
In case that it cannot be installed to the wall due to the space or material problem, install the RAC adaptor with the two-sided tape (accessory) on the room air-conditioner.
   i) Confirm if the piping cover of the unit can be removed when performing the service maintenance, and then fix the RAC adaptor in the side of room air-conditioner with two-sided tape. (Available at the right as well as left side)
   ii) Clean the surface to be installed with a dry cloth.

NOTE:
- *Consider the following points since the adhesiveness changes according to the environmental conditions (temperature, humidity etc)*
- *The adhesiveness is decreased when there is humidity or oil.*
- *Warm the adhesive part and installation place of the two-sided tape to avoid the decrease of the adhesiveness in case the ambient temperature is low.*
- *DO NOT touch the adhesive part by fingers nor re-attach it many times. The adhesiveness has decreased and the RAC adaptor may fall off.*
- *DO NOT apply any force within 24 hours after installation.*

15.3.3. ELECTRICAL WIRING

■ System configuration

CAUTION:
- *Turn OFF the power supply of the room air-conditioner of the central control device when performing the wiring work*
- *DO NOT run all the H-LINK cable or power supply cable along the other signal cable, or malfunction may occur due to the noise, etc. If it is required to run along the other transmission cable, separate the cable more than 30cm, or run the cable through the metal tube and earth the tube.*
- *Follow local codes and regulations when performing electrical wiring and earth wiring.*
- *Transmissions cable used in H-LINK shall be 2 cores cable (0.7mm^2 to 1.25mm^2 for model: VCTF, VCT, CVV, MVVX, CVVX, VVR, VVF) or 2 cores twisted pair cable (model: KPEV, KPEV-Spec). Total length of cable shall be below 1000mm.*
- *DO NOT use wire with more than 3 cores.*

■ Internal components and Wiring connections

Check the contents and the number of the accessories in the packing.

- Access
  Open the cover by removing the ① and ② screws.

- Wiring Connection
  Connection with Room Air-Conditioner
  i) Remove the front cover of the room air-conditioner and the cover of electrical box.
  ii) The cable attached with the connector of the RAC adaptor shall be connected with the connector of indoor PCB

iii) Install the electrical box cover paying attention not to clamp the cable. Read the installation manual of each room air-conditioner for confirming how to connect and how to assemble the cable of the RAC adaptor.

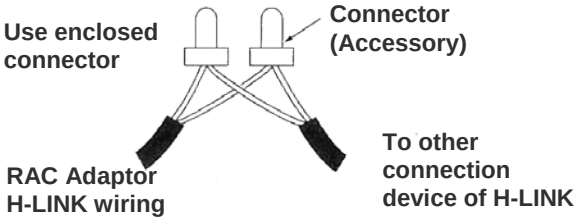

CAUTION:

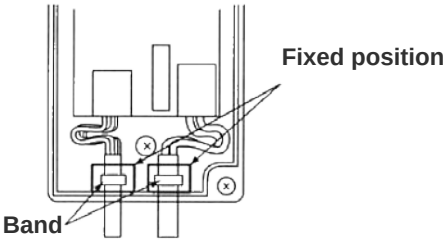

– *Disconnect the power plug before performing this work*

– *Turn OFF the break power source in case the power is supplied from the outdoor unit.*

- Connection of Transmission Cable

H-LINK transmission cable connecting to RAC adaptor shall be connected to H-LINK.

CAUTION:

– *DO NOT connect incorrect wiring. It may cause the failure of the RAC Adaptor. Especially pay attention not to apply high voltage e.g. AC400/230V.*

– *DO NOT perform the wiring work while power to the central station or the RAC Adaptor is still being supplied.. It may cause malfunction. Turn OFF devices when performing the wiring work.*

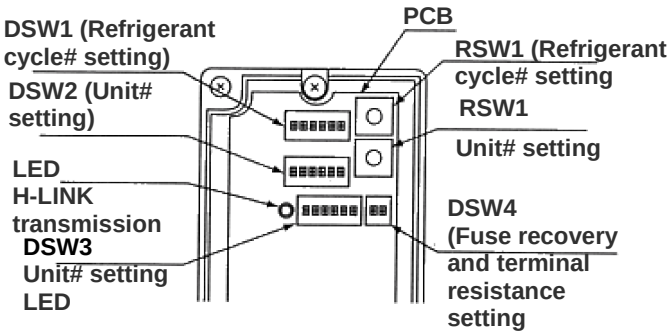

– *The RAC Adaptor side cable should not overload to the connector.*

– *DO NOT clamp the cable when attaching the RAC adaptor cover.*

– *Band should not be loose and in fixed position.*

15.3.4. DIP SWITCH SETTING

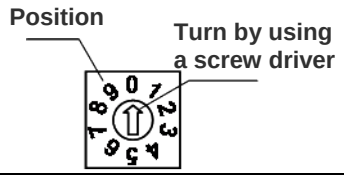

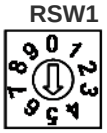

1) Switch OFF the power of room air conditioner before setting the DIP switch. If the power is ON, the settings are INVALID.
2) The position of the DIP switch is shown below.

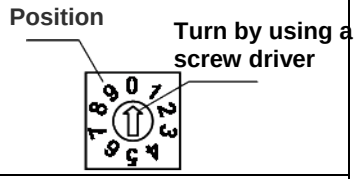

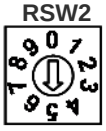

CAUTION:

– *DO NOT turn ON various pins of DSW1 and DSW2*

3) Set the refrigerant cycle# by RSW1 and DSW1

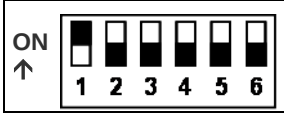

DSW1 (Ten digit)	RSW1 (Last digit)
	
DSW1 and RSW1 are set “0” before shipment. Up to 15 cycles can be set.	
E.g. Setting in Ref No. 5  **No. 1 pin is OFF**	 **The position is Set 5**

4) Set the unit No. by RSW2 and DSW2

DSW2 (Ten digit)	RSW2 (Last digit)
	
DSW2 and RSW3 are set “0” before shipment. Up to 15 cycles can be set.	
E.g. Setting in Unit No. 15  **No. 1 pin is OFF**	 **The position is Set 5**

5) Slave unit.

In case of setting various RAC adaptors in the same refrigerant cycle, set the RAC adaptor with smallest Unit# as a master unit. In case of setting only one RAC adaptor in a refrigerant system, this adaptor should be a master unit. Set this procedure by DSW3.

Master Unit setting	Setting before shipping (slave unit setting)
	

●: Master Unit setting

○: Setting before Shipping (Slave Unit setting)

Indoor Unit#

Refrigerant Unit#

	0	1	2	3	4	5	6	7		
0	●	○	○	○	○					
1			●	○	○					
2				●	○	○	○	○		
3		●								
4										

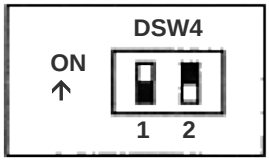

CAUTION:

– *DO NOT set various main adaptors in the same refrigerant cycle.*

6) Procedure when applying 200V voltage to H-LINK wiring incorrectly.

In case of applying 200V voltage to H-LINK wiring incorrectly, the fuse installed in a transmission circuit on PCB will blow out. In this case, reconnect the wiring correctly and turn ON No. 2 pin of DSW4 on PCB. The transmission circuit can be recovered. (If applying this error again, the transmission circuit can not be recovered)

PCB

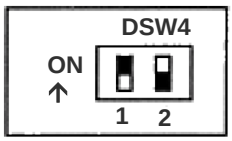

Turn ON No.2 pin of DSW4

7) Terminating resistance is set in whole H-LINK system.

a) If H-LINK connecting devices like package air-conditioner are connected besides the RAC Adaptor, set the terminating resistance by those connecting devices. The terminating resistance should be set ON in only one position in whole H-LINK system.

b) In case that H-LINK is connected only by the RAC adaptor, set the terminating resistance by the RAC adaptor. The terminating resistance should be set ON in only one position in whole H-LINK system.

PCB

Turn ON No.1 pin of DSW4

15.3.5. TEST RUN

Test run should be performed in the following after finishing the installation, wiring and setting. Refer to the installation manuals enclosed with the control system equipment.

1) Confirmation of RAC Adaptor Connection
Confirm if the RAC adaptor connection is recognized in the control system equipments. In case that it is not confirmed, check the transmission cable, refrigerant cycle #, indoor unit #, terminal resistance setting etc.
2) Registration
Confirm if the RAC adaptor connection is recognized.
3) Confirmation of RUN/STOP Operation.
Confirm if the room air-conditioner operate correctly by RUN/STOP from the central control system equipments. Check also if the room air-conditioner operation changes correctly by each setting.

HITACHI

TC_ERP 00.1.3a-9 – 06/13
